AMSAT News Service Bulletin 027.05
From AMSAT HQ SILVER SPRING, MD.
January 27, 2008
To All RADIO AMATEURS

BID: $ANS-027.05

On January 24, 2008 AMSAT President Rick Hambly W2GPS testified before the Maryland State Senate Judicial Proceedings Committee in support of Senate Bill 80 that would prohibit "homeowners associations from restricting or prohibiting the design, placement, screening, height, or use of specified amateur radio equipment." It is hoped that we will also get a hearing before a House committee in a few weeks. There was no opposition to this bill during the hearing, unlike previous years. For more information see http://mlis.state.md.us/2008rs/billfile/sb0080.htm and http://n3ij.home.comcast.net/.

SB SAT @ AMSAT $ANS-027.06
ARISS Status - 21 January 2008

AMSAT News Service Bulletin 027.06
From AMSAT HQ SILVER SPRING, MD.
January 27, 2008
To All RADIO AMATEURS
BID: $ANS-027.06

1. ARISS School Contacts Status

Due crew schedules onboard the ISS, no Amateur Radio on the International Space Station (ARISS) contacts are planned at this time. The ARISS team expects contacts to resume once STS-122 launches in early February.

2. Astronaut Training Status

On Wednesday, January 16, Russian cosmonaut Oleg Skripochka, RN3FU, participated in a simulation of an Amateur Radio on the International Space Station (ARISS) school contact. The Kenwood D700 radio in the JSC Service Module mockup was used for the contact. Skripochka spoke with the training support team who participated as students, asking Oleg questions about space and his visit on ISS. He is currently scheduled as an Expedition 17 backup crew member.

3. ARISS Annual Report Posted

The Amateur Radio on the International Space Station (ARISS) FY2007 Annual Report has been posted to the ARISS section of the AMSAT Web site. See: http://www.amsat.org/amsat/ariss/Papers/Annual%20Reports/ARISS_Annual_Report_2007_Final.pdf

4. Gail Borden Library Wins Award

The Gail Borden Public Library in Elgin, Illinois was one of five libraries to win the 2008 John Cotton Dana Library Public Relations Award. The library won the award for its "Space: Dare to Dream" exhibit. A highlight of the exhibit, which ran for four months during 2007, was an Amateur Radio on the International Space Station (ARISS) contact. The Summer Reading program resulted in an increase in program participants, library card registrations and material circulation.

[ANS thanks Carol, KB3LKI, for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink:   145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the
memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

AMSAT NEWS SERVICE
ANS-034

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:
* AO-16 Status
* AMSAT STraight key nite winners
* ISS Cross Band Repeater
* DC Area AMSAT Gathering
* OSCAR 11 Report
* ARISS Status - 28 January 2008
* ANDE De-Orbit Awards Have Been Mailed
* ARISS INTERNATIONAL CHAIRMAN MOVES INTO NEW POSITION AT NASA

SB SAT @ AMSAT $ANS-034.01
AO-16 Status

AMSAT News Service Bulletin 034.01
   From AMSAT HQ SILVER SPRING, MD.
February 3, 2008
To All RADIO AMATEURS
BID: $ANS-034.01

AO-16 is now alive and well. Many contacts going through the previously packet only satellite. Uplink on 145.920 and downlink 437.026. Its downlink is best heard in USB mode since it is a doubleside band, reduced carrier transmitter.
Thanks to someone that assisted in assembling this satellite for remembering a simple command to link tx and rx for direct communications not using the failed onboard computer.

[ANS thanks Drew, KO4MA, for the above information]

SB SAT @ AMSAT $ANS-034.02
AMSAT Straight key nite winners

AMSAT News Service Bulletin 034.02
   From AMSAT HQ SILVER SPRING, MD.
February 3, 2008
To All RADIO AMATEURS
BID: $ANS-034.02

Many thanks to all who participated in AMSAT's Straight Key Night on OSCAR 2008, held in memory of Haruo Yoneda, ex-JA1ANG.

Only two linear-transponder satellites were available this year, AO-7 and VO-52. Two enterprising hams, W6ASL and WA8SME, didn't let that stop them: they used audio oscillators to work each other through the FM transponder of AO-51. That counts too!

The silence of FO-29 notwithstanding, a record 15 amateurs each received at least one Best Fist nomination from someone they worked. The increase in European activity was especially welcome. This year's winners are:

Jay Garlitz, AA4FL
Sergei Pyatygin, ER1AN
Laszlo Kekes, HA5FB
Ron Gorzynski, K8DID
Frank Wiesenmeyer, K9CIS
Scott Newell, KA8HOK
Keith O'Brien, N4ZQ
Allen Mattis, N5AFV
Al Ozias, N7EQF
Rolf Moberg, OH6KXL
Andy Macallister, W5ACM
Jim Van Striver, W6ASL
Mike Herr, WA6ARA
Mark Spencer, WA8SME
Neven Mrduljas, 9A5YY

Congratulations to all. See you next year!

[ANS Thanks Ray, W2RS, for the above information]

SB SAT @ AMSAT $ANS-034.03
ISS Repeater

AMSAT News Service Bulletin 034.03
From AMSAT HQ SILVER SPRING, MD.
February 3, 2008
To All RADIO AMATEURS
BID: $ANS-034.03

The ISS cross band repeater is on and functioning as of this announcement. It is on Uplink - 437.800FM
Downlink - 145.800FM. It is quite strong and can be heard well on a simple setup. I read a report that "someone" called CQ and there was no -one coming back to him. Listen and give it a shot.

[ANS thanks Tony, K2MO, for the above information]

Meeting Announcement-AMSAT-DC

We will meet in Pioneer Hall at the Historical Electronics Museum. Same place as last year, same time as last year, for at least one more time. If you can't make Dayton or the Symposium, plan to attend this great gathering.

Clip and share!

++

2008 AMSAT-DC MEETING AND SPACE SEMINAR

WHO: YOU are invited! Amateur radio operators, students, educators and the public are all invited.

WHAT: Talks, demos, tutorials and socializing about amateur satellites and high-altitude balloon experiments in the greater mid-Atlantic USA area. A full day of activities!

WHEN: Saturday, March 15, 2008, starting at 11:00 A.M. local.

WHERE: Historical Electronics Museum (HEM) at 1745 West Nursery Road, Linthicum, Maryland 21090 (near BWI airport). In Pioneer Hall. HEM directions at http://www.hem-usa.org/

WHY: Fun, education, public service, training, cool stuff, and more fun.

HOW: Talk-in on 146.760 MHz (107.2 Hz PL on some receiver sites)

HOST: Pat Kilroy, n8pk@amsat.org or Patrick.L.Kilroy@nasa.gov

WEB: Check the AMSAT-DC page http://patkilroy.com/amsat-dc/ for late breaking news.

++

Notes:

Please download the AMSAT-DC-2008 flier from the AMSAT-DC web page, print copies and share them widely, like at a club meeting, at a hamfest, in a public library, in a school, and other visible places.

Meeting preparations are being conducted on the amsat-dc e-mail list. Go to the link at top of the AMSAT-DC page to subscribe.

This year will feature something new, a Pot Luck luncheon! You may bring a favorite dish to share. See the AMSAT-DC web page for additional info or please contact the host, yours truly, at n8pk@amsat.org.

Free paved parking is available a short walk from the museum front door. Like before, monetary donations will be accepted to help offset the associated meeting and seminar costs. Like last year, we'd like to in turn donate a portion to the museum for the use of their facility.

Outrageous fun, learning, and camaraderie are in store for you.

See you there!

73,

Pat Kilroy, N8PK
AMSAT Area Coordinator
Maryland-DC Area

[ANS thanks Pat, N8PK, for the above information]

OSCAR 11 Report

AMSAT News Service Bulletin 034.05
From AMSAT HQ SILVER SPRING, MD.
February 3, 2008
To All RADIO AMATEURS
BID: $ANS-034.05

OSCAR-11 Report for 26 January 2008

This report covers the period from 19 December 2007 to 26 January 2008. After two months of silence from 20 November, when eclipses started, the satellite resumed transmissions on 22 January 2008.

At the time of writing signals are consistantly strong, although the polarisation is very variable, with a cycle time of around 20 seconds, causing deep fading if the antenna polarisation is fixed. This suggests that the satellite may be tumbling.

If the current watchdog cycle continues uninterrupted, the 145.826 MHz beacon should switch off around 01 February and on again around 11 February. However, if low battery voltage causes the watchdog timer to reset, then the beacon should switch on 21 days later.

I am indebted to Peter ZL3TC, Mark KU7Z, Gene WA4UKX, SWL Mark in CM87, Ron G4PGY, Julian WB9YIG, John HB2HSH and Edward BX1AD for their reports. Many thanks.

The satellite is now in continuous sunlight, and this is expected to continue until mid March, when eclipses will start again. Unfortunately eclipses will then become a permanent feature of the orbit, which is likely to prevent any periods of sustained operation after March.

When telemetry was last received it showed that one of the solar arrays had failed, and there was a large unexplained current drain on the main 14 volt bus. After 23 years in orbit the battery has undergone around 100,000 partial charge/discharge cycles, and observations suggest that it cannot power the satellite during eclipses, or sometimes during periods of poor solar attitude.

The Beacon frequency is 145.826 MHz. (AFSK FM ASCII Telemetry)

Listeners to OSCAR-11 may be interested in visiting my website. If you need to know what OSCAR-11 should sound like, there is a short audio clip for you to hear. There is an example of the latest telemetry received from the satellite. The website contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is http://www.users.zetnet.co.uk/clivew/

SB SAT @ AMSAT $ANS-034.06
ARISS Status - 28 January 2008

AMSAT News Service Bulletin 034.06
   From AMSAT HQ SILVER SPRING, MD.

February 3, 2008
To All RADIO AMATEURS
BID: $ANS-034.06

1. ARISS School Contacts Status

Due to crew schedules onboard the ISS, no Amateur Radio on the International Space Station (ARISS) contacts are planned at this time. The ARISS team expects contacts to resume once STS-122 launches in early February.

2. STS-120 Crew Talks with Italian Students

On January 22, STS-120 crewmembers visited "La Sapienza" University in Rome where approximately 600 students from several universities and high schools gathered. Among those in attendance were students from the schools that participated in ARISS contacts with astronauts Paolo Nespoli, IZ0JPA, and Clay Anderson, KD5PLA. The crew gave a presentation on their mission which included educational activities, and showed videos to their audience. The complete story and photos of the event have been posted on the ARISS Web site. See:
http://www.ariss-eu.org/2008_01_25.htm

3. Astronaut Training Status

On Wednesday, January 23, Russian cosmonaut Oleg Kononenko, RN3DX, participated in a simulation of an Amateur Radio on the International Space Station (ARISS) school contact. The Kenwood D700 radio in the JSC Service Module mockup was used for the contact. He spoke with the training support team who participated as students, asking Oleg questions about space and his visit on the ISS. Kononenko is scheduled as a flight engineer on Expedition 17.

A basic Amateur Radio on the International Space Station (ARISS) operations and school contact class was held with Soichi Noguchi, KD5TVP, and Koichi Wakata, KC5ZTA, on January 24. Wakata is scheduled to fly to the ISS on 15A (STS-119) toward the end of 2008 as Flight Engineer-2 during Expedition 18. Noguchi is the backup for that flight and could participate as part of the 6 man ISS crew operations in 2010.

Mike Barratt, KD5MIJ, has been scheduled for an ARISS training session at JSC on Tuesday, January 29. Barratt is a backup crewmember for Expedition 18.

4. ARISS Looking for New Telebridge Stations

The Amateur Radio on the International Space Station (ARISS) team is currently looking to expand its telebridge station network. The proposal has been announced on the ARISS Web site. The American Radio Relay League (ARRL) ran an article, "ARISS Team Looking for Ground Stations," which may be found at: http://www.arrl.org/news/stories/2008/01/22/100/?nc=1

The ARRL Letter also ran the announcement. See:

http://www.arrl.org/arrlletter/08/0125/

5. ARRL Article on JPL Amateur Radio Club Anniversary

The American Radio Relay League (ARRL) ran an article, "Jet Propulsion Lab's Amateur Radio Club Marks 50 Years in Space." See: http://www.arrl.org/?artid=7957

[ANS thanks Carol, KB3LKI, for the above information]

Amateur Radio on the International Space Station (ARISS) International

Chairman Frank Bauer, KA3HDO, was named recently as the NASA Headquarters Chief Engineer for the Exploration Systems Mission Directorate (ESMD). ESMD is NASA's initiative to develop a sustained human presence on the moon, promote space exploration and serve as a stepping stone to Mars and beyond. As ESMD Chief Engineer, he provides systems engineering advice and consultation to resolve some of the most demanding and complex technical and organizational challenges within the Exploration Program.

Bauer and Rosalie White, K1STO, are the two ARISS delegates for the US. He is the Vice President of Human Spaceflight Programs for the Radio Amateur Satellite Corporation. Bauer was a 2006 nominee for the Rotary National Award for Space Acheivement, bestowed upon him for "his tireless work to engage the youth of our nation and the world in the exploration of space through unique direct communications made possible by Amateur Radio on human spaceflight missions."

Bauer is the recipient of NASA's 2002 Outstanding Leadership Medal, the 1997 NASA Exceptional Achievement Medal -- bestowed for Pioneering Efforts in Spaceborne GPS -- and NASA's 1992 Exceptional Service Medal (for agency contributions in GN&C). He received the Silver Snoopy Award, the highly prestigious NASA Human Spaceflight Awareness award, in 1992.

For more information about ARISS, please visit the ARISS Web page <http://www.rac.ca/ariss/oindex.htm>.

[ANS Thanks, ARRL news for the above item]

Bert Hyman <bert@iphouse.com> wrote in
news:Xns9A26B93F12AB8VeebleFetzer@216.250.184.7:

<snip>
> If you were using a real news provider and a real news client

> instead of googlegroups, you could filter the group yourself
> if your news provider wasn't already doing it for you. <snip>

For those of us who do use a desktop newsreader with slrn kill filing options, it would be helpful if the lead RMOB bulletin and AMSAT posters would post separate posts to single usenet groups only, instead of:

Newsgroups: rec.radio.amateur.space,rec.radio.info

Newsgroups: rec.radio.amateur.space,sci.astro.amateur

- post individual messages to:

Newsgroups: rec.radio.amateur.space
Newsgroups: rec.radio.info
Newsgroups: sci.astro.amateur

The single most effective kill file technique is the filtering of any message that is cross-posted to more than one group. I realize that it is an imposition on your sending end, but regretably it is probably necessary in the current usenet environment.

At present, I have to go back and pick up your interesting bulletins manually because they are filtered out due to your use of crossposting.

Best wishes, Canopus56

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deborbited/returned satellites

SILVER SPRING, MD, February 07, 2008
TO ALL RADIO AMATEURS
BID: $ANS-038.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:

Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon that is active. Each transponder has a different beacon.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.
[05282007]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: Operational - check operational schedule for current times!!

Current Mode: V/u

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD
Uplinks: 145.850 MHz FM
145.870 MHz FM
145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

Mode and Antenna Polarization:
V: RHCP
U: RHCP

TiungSat-1 is Malaysia's first micro-satellite and in addition to
commercial
land and weather imaging payloads offers FM and FSK Amateur Radio
communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a
collaborative effort between the Malaysian government and Surrey
Satellite
Technology Ltd.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)
- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

AMSAT NEWS SERVICE
ANS-041

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* ARISS-Europe Amateur Radio Antennas Reach Orbit
* AO-51 February Schedule
* ARISS Observes SuitSat-1 Anniversary
* AO-51 Satellite Cardboard Model Prototype Assistance Requested
* AMSAT Presence at Orlando Hamcation This Weekend
* FO-29 Status
* Satellite Shorts From All Over
* ARISS Status Report For The Week of February 4, 2008

SB SAT @ AMSAT $ANS-041.01
ARISS-Europe Amateur Radio Antennas Reach Orbit

AMSAT News Service Bulletin 041.01
>From AMSAT HQ SILVER SPRING, MD.
February 10, 2008
To All RADIO AMATEURS
BID: $ANS-041.01

When the Shuttle Atlantis launched on Thursday, February 8 the European Space Agency's Columbus module was on its way for delivery at the International Space Station. The amateur radio antennas mounted on the exterior open a new phase of amateur radio in space. While it will take several months to complete the ham shack aboard the Columbus module the first step has been taken.

Frank Bauer, KA3HDO, ARISS International Chairman, and AMSAT-NA V.P. for Human Spaceflight Programs was quite pleased at this milestone and told the team, "I would like to extend my congratulations to the ARISS-Europe team on today's successful launch of our newest on-orbit hardware delivery, the additional ARISS antennas!"

The ARISS-Europe team have been working hard and diligently for over 5 years to realize this outstanding milestone. The team faced numerous challenges, including some very severe environmental testing to get approval to fly these antenna systems.

Noting the international effort for this success, Frank continued, "I would like to thank Gaston Bertels, ON4WF for his outstanding leadership on this project and Dr. Pawel Kabacik at the Wroclaw University of Technology in Poland for his efforts in the antenna design and testing. And I would like to extend my sincere gratitude to all those who contributed to this project through their volunteer efforts, financial contributions and/or in-kind contributions. YOU helped us develop, test and fly these antennas."

For more information on the ARISS antennas, see:
http://www.ariss-eu.org/

[ANS thanks Frank, KA3HDO and ARISS for the above information]

/EX

SB SAT @ AMSAT $ANS-041.02
AO-51 February Schedule

AMSAT News Service Bulletin 041.02
>From AMSAT HQ SILVER SPRING, MD.
February 10, 2008
To All RADIO AMATEURS
BID: $ANS-041.02

Drew KO4MA, AMSAT-NA VP Operations noted this week, "The AO-51 committee has completed a schedule for February. We will continue the V/US repeater mode that began on January 25th for all of February, except on Tuesdays through Thursdays when we will switch to L/US.

This pattern will repeat every week in February except that the mode switch from V/US to L/US on Tuesday the 12th will be delayed until Wednesday the 13th to accommodate a School Roundup event at Two Rivers School in North Bend, Washington.

The S-band downlink may be temporarily suspended for WOD telemetry download without notice. Generally this will only be for one pass per day.

Regarding the graphic schedule on the main AMSAT web page, the software that does the schedule will not allow for the proper display of the current modes. Please refer to:
http://www.amsat.org/amsat-new/echo/CTNews.php

February 2008 AO-51 (AMSAT Echo) Schedule

February 1 until February 29, subject to modification

February 8 - February 12
FM Repeater, V/US

Uplink: 145.920 MHz FM, NO PL Tone
Downlinks: 435.300 and 2401.200 MHz FM

February 13 - February 14
FM Repeater, L/US
Uplink: 1268.700 MHz FM, NO PL Tone
Downlinks: 435.300 and 2401.200 MHz FM

February 15 - February 18
FM Repeater, V/US
Uplink: 145.920 MHz FM, NO PL Tone
Downlinks: 435.300 and 2401.200 MHz FM

February 19 - February 21
FM Repeater, L/US
Uplink: 1268.700 MHz FM, NO PL Tone
Downlinks: 435.300 and 2401.200 MHz FM

February 22 - February 25
FM Repeater, V/US
Uplink: 145.920 MHz FM, NO PL Tone
Downlinks: 435.300 and 2401.200 MHz FM

February 26 - February 28
FM Repeater, L/US
Uplink: 1268.700 MHz FM, NO PL Tone
Downlinks: 435.300 and 2401.200 MHz FM

February 29 - TBD
FM Repeater, V/US
Uplink: 145.920 MHz FM, NO PL Tone
Downlinks: 435.300 and 2401.200 MHz FM

[ANS thanks the AO-51 Operations Committee for the above information]

SB SAT @ AMSAT $ANS-041.03
ARISS Observes SuitSat-1 Anniversary

AMSAT News Service Bulletin 041.03
>From AMSAT HQ SILVER SPRING, MD.
February 10, 2008
To All RADIO AMATEURS
BID: $ANS-041.03

In marking the 2nd anniversary of the deployment of SuitSat-1 /Radioskaf/AO-54 from the ISS this week, Frank Bauer, KA3HDO, ARISS International Chairman, and AMSAT-NA V.P. for Human Spaceflight Programs said, "I want to take this opportunity to thank all the volunteers around the world that supported the SuitSat-1 development, deployment, public outreach and ground station reception." Frank said the SuitSat certificates have been mailed as of this past week.

2008 brings new opportunities to you, the hams interested in ARISS, which includes:

+ Plans to commemorate the 25th anniversary of human spaceflight ham radio operation---the flight of Owen Garriott, W5LFL on the space shuttle Columbia, STS-9 in 1983.

+ A team of dedicated amateur radio operators is working to bring SuitSat-2 to reality. At this point in time, it is not clear when it will be deployed, but we are working feverishly to have it ready for deployment before the end of the year.

+ We expect to have significant ARISS crew amateur radio participation starting in the October 2008 timeframe with the launch of the Expedition 18 crew and Soyuz taxi flight.

Frank wraps up with, "I thank all of you for your interest in ARISS. This program is truly inspirational for students, the ham radio community, and the communities surrounding the schools that have been touched by the 334 (to date) school contacts conducted since December 2001."

[ANS thanks Frank, KA3HDO and ARISS for the above information]

/EX

SB SAT @ AMSAT $ANS-041.04
AO-51 Satellite Cardboard Model Prototype Assistance Requested

AMSAT News Service Bulletin 041.04
>From AMSAT HQ SILVER SPRING, MD.
February 10, 2008
To All RADIO AMATEURS
BID: $ANS-041.04

Stefan, VE4NSA has finished the 1st prototype of an AO-51 cardboard model design and would like to give a few dedicated individuals the opportunity to actually build the model and help him with the final design and the necessary instructions.

Stefan notes, "At this stage I will need individuals that have built cardboard models (ships, airplanes, rockets etc.) before and don't need detailed instructions but know the tools that are required to assemble such a model."

Pictures of the current prototype can be seen at:
http://www.msig.ca/model.html

It is still a work in progress and hopefully will end up as a product that AMSAT can offer for a donation. I designed the model in a 1:1 scale but for the purpose of this project it has been reduced to 75% size. This will allow builders to print it on regular size photo paper and still have a beautiful model for display in the shack, school projects, or amateur radio presentations.

Building the model will require time, patience and a color printer since the model is distributed as pdf files. This form of distribution will save paper and will allow you to print it as many times as you need.

As mentioned above, Stefan is looking for up to five test builders (with experience) that are willing and able to finish the model in four to five weeks. It is not a two hour project and dedication to detail and exact cutting and gluing is required. Those that help and provide him with updates on their progress and final feedback will get the final distribution files as well as the model files in a 1:1 scale.

Send Stefan an email <callsign>@amsat.org if you are interested!

[ANS thanks Stefan, VE4NSA for the above information]

SB SAT @ AMSAT $ANS-041.05
AMSAT Presence at Orlando Hamcation This Weekend

AMSAT News Service Bulletin 041.05
>From AMSAT HQ SILVER SPRING, MD.
February 10, 2008
To All RADIO AMATEURS
BID: $ANS-041.05

This weekend AMSAT will have a large presence at the Orlando Hamcation. It will remind some people of Dayton. The Orlando Hamcation has grown in size and prominence in the U.S. After all, it is in a "horrible place" for Winter in the U.S.! See: http://www.hamcation.com/

The following AMSAT board members and officers will be there:

AMSAT President Rick Hambly, W2GPS
AMSAT President Emeritus, Tom Clark, K3IO (ex-W3IWI)
AMSAT Executive V.P. Lee McLamb, KU4OS
AMSAT V.P. Operations, Drew Glasbrenner, KO4MA
AMSAT V.P. Field Ops, Gould Smith, WA4SXM
AMSAT V.P. Engineering Bob McGwier, N4HY

Some of the above are board members. Additionally, board members Lou McFadin, W5DID and Barry Baines, WD4ASW will be in attendance. Barry Baines is our new Eagle/Intelsat project manager.

AMSAT has been granted prominent times and rooms for presentations. AMSAT is bringing the operational SDX and will soon thereafter put an SDX based linear transponder on the air covering much of the state of Florida and in a prominent place in Maryland. Additionally, one of the SDX will be in use in Europe thanks to a generous offer and help from Viktor Kudielka.

Taking advantage of the occasion, AMSAT will hold engineering planning meetings in Orlando this weekend for engineering management. This was decided because so many of these people were going to be in attendance anyway.

[ANS thanks Bob, N4HY AMSAT-NA VP Engineering for the above information]

SB SAT @ AMSAT $ANS-041.06
FO-29 Status

AMSAT News Service Bulletin 041.06
>From AMSAT HQ SILVER SPRING, MD.
February 10, 2008
To All RADIO AMATEURS
BID: $ANS-041.06

Toyo Komatsu, JA0CQP provided an update on behalf of JARL in regards to the status of the FO-29 satellite. JARL is the agency responsible for FO-29 operation.

While command and control and some transponder operation has been recovered over Japan, JARL notes at this time FO-29 is not in condition to offer worldwide service with control stations around the world.

The satellites power budget is a key issue. Although power from the solar cells is just adequate for operation, the inner impedance of the Ni-Cd rechargeable batteries is increasing. They cannot support operation of the transmitter approximately 10 minutes after entering eclipse.

The PCU (Power Control Unit) has failed and the satellite's transmitter does not automatically recover, requiring intervention by the ground control station in Tokyo.

JARL will continue to monitor the situation aboard FO-29 and preserve its functionality for as many as users around the world as possible. This situation may continue for up to 2 years until FO-29 enters a no-eclipse period in 2010.

[ANS thanks Toyo Komatsu, JA0CQP for the above information]

SB SAT @ AMSAT $ANS-041.07
Satellite Shorts From All Over

AMSAT News Service Bulletin 041.07
>From AMSAT HQ SILVER SPRING, MD.
February 10, 2008
To All RADIO AMATEURS
BID: $ANS-041.07

+ AMSAT Engineering needs experienced help programming the MPS-430. This processor will be in a Cubesat. The preference is to use FreeRTOS on it but adequate reasons for not following this path can be discussed. Email to n4hy@amsat.org directly.

+ JAMSAT (Japan-AMSAT) announced that QSL cards for QSOs via ISS Cross Band Repeater are valid for the "JAMSAT 5 Stars Award".

+ The 2008 Microwave Update is being planned for the weekend of October 17-18-19 in the Minneapolis area.

+ The dates for the AMSAT-UK Colloquium are July 25,26,27, 2008.

+ The University of Louisiana is asking for a volunteers to help mentor a senior design capstone project to design and test to destruction with high dose of radiation a communication control and data handling processor. This processor is planed to fly on the CAPE II satellite on 2009. It is anticipated that this will involve two one hour session a month via WEB X. We are seeking those have skill in designing fault tolerant microprocessors and have knowledge of how high energy particles effect memory chips. Contact k5qxj@amsat.org.

+ W5ACM, W5GFP, WA5TWT, WA5WOD, N5RPQ and WB5RMA finished up a cruise to the western Caribbean. Over 90 QSOs were made using call W5ACM/MM from the Carnival Conquest. Some AO-16 passes with excellent results. Most of the contacts were via AO-51 but they were amazed at the signal strength of the AO-16 downlink. It was REALLY EXCELLENT!!

+ The launch of the NLS-4 cluster including Delfi-C3 has been delayed again, for now, it is scheduled for mid-April. Updates will be posted on the Delfi mission status page.

+ PB and PG for Linux are programs used for download from and upload to digital satellites (Pacsats) supporting the FTL0 protocol. This software allows you to directly communicate with the Microsat series of satellites. Release 2.2.1 of PB/PG for Linux is now available from ftp.amsat.org /amsat/software/Linux/pbpg-2.2.1.tar.gz
(via oz6bl (at) amsat (dot) org)

+ Would you like to name the next great space telescope? Here's your chance: NASA is inviting members of the general public to suggest a new name for the Gamma-ray Large Area Space Telescope before it launches in mid-2008. See:

http://science.nasa.gov/headlines/y2008/08feb_namethattelescope.htm?list9589
01

Anyone who drops a name into the "Name That Satellite!" suggestion box on the Web page can choose to receive a "Certificate of Participation" via return e-mail. Participants also may choose to receive the NASA press release announcing the new mission name. The announcement is expected approximately 60 days after launch of the telescope.

+ Clint Bradford, K6LCS has secured an AMSAT member deal from HRO on the Arrow satellite antenna with duplexer: Model 146/437-10WBP for $125.95. That's about $10-15 off suggested retail. Offer good through February. Contact k6lcs@amsat.org.

+ AMSAT needs volunteers to "man" the AMSAT booth at Timonium, one of the largest amateur radio shows on The East Coast. The dates are March 29 and March 30 at the Maryland State Fairgrounds in Timonium, Md. See: http://www.gbhc.org/ Contact Martha at AMSAT HQ if you can help! 301-589-6062, or e-mail martha@amsat.org.

[ANS thanks everyone for the above information]

/EX

SB SAT @ AMSAT $ANS-041.08
ARISS Status Report For The Week of February 4, 2008

AMSAT News Service Bulletin 041.08
>From AMSAT HQ SILVER SPRING, MD.
February 10, 2008
To All RADIO AMATEURS
BID: $ANS-041.08

1. ARISS School Contacts - Status

Due to crew schedules onboard the ISS, no ARISS contacts are planned at this time. The ARISS team expects contacts to resume once STS-122 launches in early February.

2. Glenden State School Receives Award for ARISS Contact

An ARISS contact took place between Glenden State School in Queensland, Australia and Sunita Williams, KD5PLB, on April 4, 2007. On January 26, 2008 the school was presented with an Australia Day Award in recognition of the contact. The mayor who bestowed the award noted that the contact was a very unique educational outreach activity in which the community became involved. ARISS member Shane Lynd, VK4KHZ, submitted an article covering this news to the Wireless Institute of Australia. The story and photos have been posted under News on the ARISS Website.

See: http://www.rac.ca/ariss/oindex.htm

3. Astronaut Training Status

On Tuesday, January 29, Mike Barratt, KD5MIJ, participated in an ARISS training session at JSC. Basic radio operations and school contacts were covered during the class. Barratt is a backup crewmember for Expedition 18, and the prime Flight Engineer for Expedition 19A.

ARISS conducted an amateur radio school contact simulation utilizing a local school. Students at Bay Area Charter Elementary near JSC took part in 2 sessions on Friday, February 8 at approximately 9:45 am and 10:10 am CT via the JSC W5RRR repeater. Mike Fincke, KE5AIT, participated in the first contact and Koichi Wakata, KC5ZTA, participated in the second simulated contact. These two contacts were retransmitted on the Internet Radio Linking Project (IRLP) and the W5RRR repeater. This is the first time a school contact simulation training session has been conducted live with students at the other end of the session. If successful, it might be possible to conduct a handful of these sessions each year.

4. ARISS Radio Configured in Crossband Repeater Mode

On Thursday, January 31, cosmonaut Yuri Malenchenko, RK3DUP, configured the ARISS Kenwood radio to crossband repeater mode. The frequencies are 437.800 MHz uplink and 145.800 MHz downlink.

5. ARRL Article on ARISS Chairman

The American Radio Relay League (ARRL) ran an article on ARISS Chairman Frank Bauer in its ARRL Letter. To view the story, "ARISS International Chairman Moves into New Position at NASA," see: http://www.arrl.org/arrlletter/08/0201/

6. SuitSat-1 Certificates

The ARISS team has begun to distribute certificates for participation in the SuitSat-1 project. Additional certificates will be mailed as participant lists are received. SuitSat-1, an amateur radio satellite housed in a Russian Orlan spacesuit, was deployed on February 3, 2006 and received extensive media coverage and over 9.5 million hits on the SuitSat Web site.

[ANS thanks Carol, KB3LKI for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

AMSAT NEWS SERVICE
ANS-048

ANS is a free, weekly, news and information service of AMSAT North
America,

The
Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in
designing, building, launching and communicating through analog and digital
Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:
* AMSAT Lab Status and Volunteer Opportunities
* AMSAT Engineering Meeting in Orlando
* Abstract Deadline Extended for the 2008 Cubesat Workshop
* Houston AMSAT Net Changes
* ARISS Status - 11 February 2008

SB SAT @ AMSAT $ANS-048.01
AMSAT Lab Status and Volunteer Opportunities

AMSAT News Service Bulletin 048.01
  From AMSAT HQ SILVER SPRING, MD.
February 17, 2008
To All RADIO AMATEURS
BID: $ANS-048.01

Bob Davis, KF4FKSS, AMSAT Lab Manager reports that appears we're within about 3
work days of completing the cleanroom at the AMSAT lab in Pocomoke, MD! This
is
good news for those of us that have spent
a year cleaning, scraping, painting, etc.

While Bob was in Orlando supporting Hamcation, where AMSAT had a booth,
presentation, Board of Directors meeting and engineering meetings, J.C., Ray,
Steve & Martin worked on the cleanroom. It is really starting to look complete
now.

Here is the Lab schedule for the next couple of weeks:
Mon Feb 18 - Open 9-5 (this is President's Day)
Sat Feb 23 - Open 9-5.

It is hoped that these dates will conclude the cleanroom effort (which is
dependent on us volunteers!). Then, work on the Eagle Engineering Unit will
begin. This is a flight-like structure that will be used to verify some

things before we are messing with the expensive (and schedule driven) flight unit. It will be taken (incomplete) to the Dayton Hamfest in May.
We also have a couple antennas we want to raise...

All volunteers are welcome! RSVP would be nice, but not required.

For directions, map to this intersection:
Broad St & Pocomoke Belt
Pocomoke City, MD 21851

If you have any questions, email Bob at KF4KSS@amsat.org

[ANS thanks Bob, KF4KSS, for the above information]

/EX

SB SAT @ AMSAT $ANS-048.02
AMSAT Engineering Meeting in Orlando

AMSAT News Service Bulletin 048.02
From AMSAT HQ SILVER SPRING, MD.
February 17, 2008
To All RADIO AMATEURS
BID: $ANS-048.02

Bob McGwier, N4HY, AMSAT VP of Engineeing called an engineering meeting for the weekend of 8-11 Feb in Orlando, FL. This meeting was to define the engineering projects, leaders and deliverables for 2008. The meeting was well attended and many tough issues were discussed. Plans to fast track some of the projects to meet Dayton, SuitSat-2, Atlanta Symposium and the balloon and cubesat launches with HAWK and HISS were made. This was a very productive meeting and details will follow in the AMSAT Journal. Bob also described the 2008 engineering tasks in a video that will soon appear on the AMSAT web site at http://www.amsat.org/amsat-new/information/videoNews.php .

The meeting also coincided with the Orlando Hamcation, were Rick Hambly,W2GPS; Bob McGwier, N4HY; Drew Glasbrenner, KO4MA; Bob Davis, KF4KSS and Lou McFadin, W5DID discussed the activities in a 90 minute forum. Dave Jordan, AA4KN and Robert Davies, KI4HXT hosted the AMSAT booth and did satellite demonstrations. The AMSAT booth was well attended and very productive. Most of the AMSAT officers and board members were available at the booth on Saturday to talk with members and to answer questions.

Videos are also being prepared of the Orlando forum talks and satellite demonstrations.

[ANS thanks Gould, WA4SXM, for the above information]

/EX

SB SAT @ AMSAT $ANS-048.03
Abstract Deadline Extended for the 2008 Cubesat Workshop

AMSAT News Service Bulletin 048.03
From AMSAT HQ SILVER SPRING, MD.
February 17, 2008
To All RADIO AMATEURS
BID: $ANS-048.03

The deadline for abstract submission for the 2008 CubeSat Workshop has been extended. Please submit your abstract by Friday March 7th at www.cubesat.org. The workshop sessions are listed below and we encourage you to focus your abstract on one of these topics:

1) New CubeSat Developers
2) Novel Avionics
3) Nanosats
4) Access to Space
5) Ground Station Operations
6) Unique Missions

Don't forget, workshop registrations is available online and spaces are filling up quickly for the workshop April 9th-11th at Cal Poly! Please contact cubesat-workshop@atl.calpoly.edu with any questions or concerns regarding registration or abstract submittal.

SB SAT @ AMSAT $ANS-048.04
Houston AMSAT Net Changes

AMSAT News Service Bulletin 048.04
From AMSAT HQ SILVER SPRING, MD.
February 17, 2008
To All RADIO AMATEURS
BID: $ANS-048.04

The Houston AMSAT Net has once again gone through some morphing. After being on the W0KIE Satellite Radio Network from our 121st net using SBS-6 on June 18, 1996 we had to move. The W0KIE Satellite Radio Network was a wonderful long term spot for us. Our 726th net on February 5, 2008 began on our new home, Galaxy-25 and the SkyScanner Satellite Radio Network (SSRN).

If you would like to hear us on K-band satellite, you can set your dish and receiver as follows:

The Houston AMSAT Net is on the SkyScanner Satellite Radio Network on Galaxy-25 @97� West, Transponder 23 (12115 Vert), Symbol Rate: 22425, APID: 1794 (DVB Free To Air)

Our internet audio can now be heard at:

+ RFD1 16k (dialup speed) at http://www.cband.info/rfd1.m3u
+ RFD2 (broadband speed) at http://www.cband.info/rfd2.m3u
+ AMSAT conference on Echolink

If you would like to join us on the IRC either during the net or at any other time.

The IRC is: irc.dishnuts.net
Then join the channel #amsat

[ANS thanks Bruce, KK5DO for the above information]

SB SAT @ AMSAT $ANS-048.05
ARISS Status - 11 February 2008

AMSAT News Service Bulletin 048.05
From AMSAT HQ SILVER SPRING, MD.
February 17, 2008
To All RADIO AMATEURS
BID: $ANS-048.05

1. Upcoming School Contact

Robespierre Elementary School in Rueil Malmaison, France has been scheduled for an Amateur Radio on the International Space Station (ARISS) contact on Thursday, February 21 at 14:21 UTC. Two hundred fifty-six students in grades 1-5 are enrolled at the school. ESA astronaut L�opold Eyharts, FX0STD/KE5FNO, plans to participate in this contact.

2. Astronaut Training Status

The Amateur Radio on the International Space Station (ARISS) team coordinated two amateur radio school contact simulations between students at Bay Area Charter Elementary in the Houston area and astronauts Mike Fincke, KE5AIT and Koichi Wakata, KC5ZTA at JSC. The two sessions took place on Friday, February 8 via the JSC W5RRR repeater. These two contacts were retransmitted on the Internet Radio Linking Project (IRLP). They were also fed into the Echolink AMSAT (101 377) and JK1ZRW (277 208) servers and received 8 connections, including 2 link nodes and one repeater node from the U.S., Japan, and the Ukraine.

3. ARRL Articles on Simulated ARISS Contacts

The American Radio Relay League (ARRL) ran a Web story on the simulated ARISS contacts that took place between astronauts Mike Finke and Koichi Wakata at JSC and Bay Area Charter Elementary in the Houston area. See:
http://www.arrl.org/news/stories/2008/02/05/100/?nc=1

The activity was also published in the ARRL Letter. See:
http://www.arrl.org/arrlletter/08/0208/

4. Columbus Module Launched

Atlantis launched on Thursday, February 7 carrying ESA�s Columbus module with new Amateur Radio on the International Space Station (ARISS) antennas. ARISS Chairman Frank Bauer sent congratulations to the European team for a job well done. See: http://www.amsat.org/amsat/archive/sarex/10day/msg01509.html

5. Shukor Debrief Scheduled

An Amateur Radio on the International Space Station (ARISS) crew debrief
has
been scheduled with Dr. Sheikh Muszaphar Shukor, 9W2MUS, on Tuesday,
February
26. Shukor, the first Malaysian space visitor, participated in 5 ARISS
contacts
with students in Malaysia while onboard the ISS.

6. Amateur Radio Newsline Article

On February 8, the Amateur Radio Newsline ran a story on Amateur Radio
on
the
International Space Station (ARISS) Chairman
Frank Bauer�s promotion at NASA. To
view this item, go to:
http://www.arnewsline.org/index.php?option=content&task=view&id=18&

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)

- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

AMSAT NEWS SERVICE
ANS-055

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:
* AMSAT Keplerian Data Approval
* Current AMSAT Awards/AMSAT Journal
* Call For European CubeSats on the Vega Maiden Flight
* ARISS Status - 18 February 2008
* OSCAR-11 Report

SB SAT @ AMSAT $ANS-055.01
AMSAT Keplerian Data Approval

AMSAT News Service Bulletin 055.01
   From AMSAT HQ SILVER SPRING, MD.
February 24, 2008
To All RADIO AMATEURS
BID: $ANS-055.01

I am pleased to announce that AMSAT's 2008-2009 request to re-distribute Keplerian elements from US Air Force Space Command (AFSPC) Space-Track web site has been approved.
Our USSTRATCOM Form 1 request to re-distribute the Keps was approved as of February 21, 2008.

This means that AMSAT will continue to distribute the NASA verbose and the two line format keplerian data for another year.
Thanks to AFSPC for their help.

[ANS thanks Ray Hoad for the above information]

Call For European CubeSats on the Vega Maiden Flight

AMSAT News Service Bulletin 055.03
From AMSAT HQ SILVER SPRING, MD.
February 24, 2008
To All RADIO AMATEURS
BID: $ANS-055.03

Call For European CubeSats on the Vega Maiden Flight

The European Space Agency (ESA) Education Office has the pleasure in issuing a Call For CubeSat Proposals to universities in ESA Member and Cooperating States to participate as an educational payload on the Maiden Flight of the Vega Launcher.

The ESA Education Office recognises the growing importance of CubeSat projects as a key tool in providing university students with a valuable hands-on practical education across all space engineering disciplines from end-to-end through the complete space project lifecycle.

The launch opportunity on the Vega Maiden Flight is offered free of charge for up to 6 CubeSats, with an additional 2 backup CubeSats on stand-by.

Proposals are solicited from interested universities with CubeSat projects of sufficient maturity level to be able to meet the Vega Maiden Flight schedule (current target launch date of December 2008).

Proposals (max. 15 pages) must be submitted via e-mail to:
education@esa.int in PDF or MS Word format by the deadline
of 17 March 2008.

Proposals will be evaluated by the ESA Selection Board and the selected CubeSats will be announced on the ESA Education web portal by 15 April 2008.

Details can be found on-line at:
http://www.esa.int/esaED/SEMSJ8QR4CF_index_0.html

[ANS thanks the European Space Agency for the above information]

SB SAT @ AMSAT $ANS-055.04
OSCAR-11 Report

AMSAT News Service Bulletin 055.04
From AMSAT HQ SILVER SPRING, MD.
February 24, 2008
To All RADIO AMATEURS
BID: $ANS-055.04

OSCAR-11 Copied But Signal Becomes Intermittent

OSCAR-11 was heard from 22 January to 01 February and from 11 February to 15 February. Signals have been very variable in strength sometimes very strong, sometimes undetectable, even at high elevations. Low signal strength was particularly noticeable at AOS and LOS, and also towards the end of the transmission periods. OSCAR-11 is expected to switch back on under control of its on-board timer around 07 March.

There should be a short period of transmissions before permanent eclipses start in mid March. After March it is unlikely that the satellite will support any sustained period of operation, and will only transmit for a short time, possibly less than a single orbit, every 21 days.

Many thanks to Peter ZL3TC, Chris M0DQO, Tobias DG3LV, Edward BX1AD, Mark KU7Z, Gene WA4UKX, SWL Mark in CM87, Ron G4PGY, Julian WB9YIG and John KB2HSH for their reports.

OSCAR-11 beacon frequency is on 145.826 MHz, AFSK FM ASCII Telemetry.

See http://www.users.zetnet.co.uk/clivew/ for additional information.

[ANS thanks Clive, G3CWV for the above information]

BID: $ANS-055.05

ARISS Status Report for the Week of February 18, 2008

1. Upcoming School Contacts

Robespierre Elementary School in Rueil Malmaison, France had an ARISS contact on Thursday, February 21 at 14:21 UTC. Two hundred fifty-six students in grades 1-5 are enrolled at the school. ESA astronaut L�opold Eyharts, FX0STD/KE5FNO, participated in this contact which will was conducted in French.

An ARISS contact is planned for College Reydellet in Saint-Denis, Ile de La R�union on Monday, February 25 at 14:44 UTC. Approximately 550 students, ages 10-17, attend the school. Students contacted Victor Afanassiev on MIR from Tsup, Moscow in September 1999 and the College welcomed Victor Poliakov and Pavel Vinogradov who threw the space model from MIR, and Jean-Lou Chretien , Jean-Pierre and Claudie Haignere. ESA astronaut L�opold Eyharts, FX0STD/KE5FNO, plans to participate in this contact which will be conducted in French.

2. Shukor Debrief Scheduled

An ARISS crew debrief has been scheduled with Dr. Sheikh Muszaphar Shukor, 9W2MUS, on Tuesday, February 26. The first Malaysian space

visitor, Shukor participated in 5 ARISS contacts with students in
Malaysia while onboard the ISS.

3. ARRL Covers Columbus News

The American Radio Relay League (ARRL) posted a W1AW bulletin and a
Web story on the Columbus module with the ARISS antennas. To view t
he story, see: http://www.arrl.org/news/stories/2008/02/14/101/?nc=1

On Friday, February 15, The ARRL Letter also posted the article,
"Astronauts Work on Columbus Lab on the ISS."
See: http://www.arrl.org/arrlletter/08/0215/

4. Amateur Radio Newsline Articles on ARISS

Amateur Radio Newsline's Report 1592, posted on February 15, 2008 ran
two ARISS related articles: "Ham Radio in Space: ISS Repeater Contacts
Good for JAMSAT Award," and "Ham Radio in Space: New ARISS Antennas
Now on the ISS." To view these articles, go to: www.arnewsline.org.

[ANS thanks Carol, KB3LKI, for the above information]

EchoLink ARISS Reunion Island ISS contact 25Feb 1441 UTC

EchoLink feed ARISS Reunion Island ISS contact
On Monday, 25 February 2008, starting at approximately 14:44 UTC, there will be a contact between the ISS and the College Reydellet, Saint-Denis, Ile de La Reunion, France.

This is a direct contact with the ham radio ground station FR5CY/P and Leopold Eyharts FX0STD/KE5FNO on the ISS. At this time we believe to get the audio from this contact via Skype to feed into EchoLink. Please join us in listening to this event.

The audio for this event will be fed into the EchoLink *AMSAT* (101 377) and *JK1ZRW* (277 208) servers by Tony VK5ZAI.

Where it looks at this time that we get the audio from this contact via Skype, it is unlikely that the audio from this event will also be fed into the IRLP Discovery Reflector 9010. We hope to have good two way audio from this contact. So far, with previous Skype feed contacts, we had good audio through Skype to get the audio from schools into our EchoLink conference rooms .

French astronaut Leopold Eyharts
As we do normally, as soon as audio is suitable for transmission over amateur radio, we may be able to start feeding audio of set up activities from about 10 to 25 minutes prior to the start of the actual contact into EchoLink for listeners who enjoy listening in on these proceedings.

Please note that there are automatic breaks in the audio transmission every 2.5 minutes during the event and while we listen to preparations going on for this contact. Each audio break is approximately 1 second long. Please configure your systems to not time out during times of inactivity or ongoing audio transmissions.

For everyone's information and future reference. When any ARISS event can be supported through the IRLP "Discovery" Reflector 9010, audio is automatically streamed to the Internet.

It is then available via the "Discovery" Reflectors companion web site www.discoveryreflector.ca . Once on its main page, select "Live Streaming Audio" (left side bar) and follow the prompts.

More directly the URL is as follows:
www.discoveryreflector.ca:8000/listen.pls

The audio on the Internet is typically delayed by about two minutes.

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink:   145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater
on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,

G0FCL and John Branegan GM4IHJ.

2008 AMSAT-DC MEETING AND SPACE SEMINAR

WHO: YOU are invited! Amateur radio operators, students, educators and the public are all invited.

WHAT: Talks, demos, tutorials and socializing about amateur satellites and high-altitude balloon experiments in the greater mid-Atlantic USA area. A full day of activities!

WHEN: Saturday, March 15, 2008, starting at 11:00 A.M. local.

WHERE: Historical Electronics Museum (HEM) at 1745 West Nursery Road, Linthicum, Maryland 21090 (near BWI airport). In Pioneer Hall. HEM directions at http://www.hem-usa.org/

WHY: Fun, education, public service, training, cool stuff, and more fun.

HOW: Talk-in on 146.760 MHz (107.2 Hz PL on some receiver sites)

HOST: Pat Kilroy, n8pk@amsat.org or Patrick.L.Kilroy@nasa.gov

WEB: Check the AMSAT-DC page http://patkilroy.com/amsat-dc/ for late breaking news.

2007 Symposium DVD Now in the AMSAT Store

AMSAT News Service Bulletin 062.02
>From AMSAT HQ SILVER SPRING, MD.
March 2, 2008
To All RADIO AMATEURS
BID: $ANS-062.02

Bruce, KK5DO, AMSAT Store Manager is quite pleased to announce a new item just added to the AMSAT store. It is the long awaited 2007 AMSAT Symposium DVD. To order yours contact Martha at the AMSAT office, telephone 301 589-6062.

This is a must for anyone that was not able to attend the 2007 AMSAT Symposium in Pittsburgh or those that attended who would like the Symposium on DVD.

This DVD has all of the 2007 papers, PowerPoints and audio of the presentations. Additional features of this DVD are the Symposium papers from 2004 and 2005, ISS Columbus module video and much more.

[ANS thanks Bruce, KK5DO for the above information]

SB SAT @ AMSAT $ANS-062.03
AO-51 Schedule Update

AMSAT News Service Bulletin 062.03
>From AMSAT HQ SILVER SPRING, MD.
March 2, 2008
To All RADIO AMATEURS
BID: $ANS-062.03

The March 2008 AO-51 schedule isn't on the web site yet but will be soon. The Operations Team has changed the links on the AO-51 page.

The AO-51 News and Text Schedule link will give you the most up to date information about the AO-51 schedule.

The Control Team Operating Schedule Grid link will take you the operating grid page, but many of the modes we are running can't be programmed into the grid yet and therefore the grid can't be displayed. We are working on changing the software to display the new modes in the grid format.

[ANS thanks Gould, WA4SXM and the AO-51 Operations Team for the above information]

SB SAT @ AMSAT $ANS-062.04
IEEE Student Microwave PA Design Competition

AMSAT News Service Bulletin 062.04
>From AMSAT HQ SILVER SPRING, MD.
March 2, 2008
To All RADIO AMATEURS
BID: $ANS-062.04

MTT-5 (High Power Amplifier Components) is pleased to announce the Fourth High Efficiency Power Amplifier Competition, which will take place at the IEEE MTT-S International Microwave Symposium (IMS), in 2008.

This competition is open to all students and graduate students registered at an educational establishment. The competitors are required to design, construct, and measure a high efficiency power amplifier, at a frequency of their choice above 1 GHz but less than 20 GHz, and having an output power level of at least 5 watts, but less than 100 watts. The winner will be judged on the design, which demonstrates the highest power added efficiency (PAE).

The power amplifiers must be brought to IMS2008 where they will be tested to verify their performance. A representative of the design group must be present at the testing to assist with the evaluation. The winner will receive a prize of $1,000, and will be invited to submit a paper describing the design for the MTT Microwaves Magazine.

Questions can be sent to Dr. Kiki Ikossi at <ikossi@ieee.org>
The power amplifier (PA) design may use any type of technology, but must be the result of student effort both in the amplifier design and fabrication.

See: http://www.ims2008.org/publications/PA-POSTER08-RevA.pdf

[ANS thanks Art, W4ART for the above information]

MicroHAMS Digital Conference 2008 Announcement

AMSAT News Service Bulletin 062.05
>From AMSAT HQ SILVER SPRING, MD.
March 2, 2008

To All RADIO AMATEURS
BID: $ANS-062.05

Announcing the second annual MicroHAMS Digital Conference! The event will be held this year on the main Microsoft campus located in Redmond, WA on March 22nd, 2008.

The agenda this year will include a wide variety of topics around digital communications and Amateur radio. Lunch and snacks are included with the price of the conference and we'll have free Internet access.

Because of space limitations and parking requirements on the Microsoft campus, we are strongly suggesting pre-registering for the event. Registration is $12.00 if done prior to the event and will be $15.00 at the door. Door Prizes include donations from Icom and MicroHAMS.

Event Details
Date/Time: March 22, 2008 09:00 to 17:00
Location: Redmond, WA (Building 122 on the Microsoft Corporate Campus)
Lunch: Sub sandwiches and snacks (included with registration fee)
Cost: $12.00 if pre-paid or $15.00 at the door.

Registration: http://www.microhams.com/digitalconference

[ANS thanks Bob, W7LRD for the above information]

Bill, NZ5N says that HQ8R will be operating on the satellites from Swan Island, grid EK87, from March 15-23. See http://www.hondurasdx.com/

Bill will be taking his FT-817 and an Arrow antenna. Time permitting, he will also try to make a few contacts before and after the expedition from the Honduran mainland (Grids: EK55, EK65 and EK75). Weather permitting, he may also try to give out EK76 from the boat on the way to and from the island.

[ANS thanks Bill, NZ5N for the above information]

WorkedGrids Software Released

AMSAT News Service Bulletin 062.07
>From AMSAT HQ SILVER SPRING, MD.
March 2, 2008
To All RADIO AMATEURS
BID: $ANS-062.07

Bert, VE2ZAZ released WorkedGrids, ham log grid square mapping software this week. It is freeware and it runs under Windows. The program displays a map showing the amateur radio grid squares contacted and logged in using third-party logging program.

WorkedGrids uses colors to display information on a per-band basis. Up to four bands can be displayed concurrently on the map. The program reads plain-text (ASCII) log files generated by most logging programs.

The software is directed towards the VHF and above operators who collect grid squares for contesting or award purposes. It is designed to supplement a logging program and it replaces the pen and paper technique for marking worked grid squares.

Please visit http://ve2zaz.net for more details. Your input is welcome!

[ANS thanks Bert, VE2ZAZ for the above information]

PCSAT Re-Enters Eclipse

AMSAT News Service Bulletin 062.08
>From AMSAT HQ SILVER SPRING, MD.
March 2, 2008
To All RADIO AMATEURS
BID: $ANS-062.08

PCSAT-1 was fully operational from 8 to about 23 Feb 2008 during full sun oribts. PCSAT has re-entered eclipses which marks the end February's Satellite Simulated Emergency Test. Bob, WB4APR received 31 reports of AMSAT users sending their SSET Email and receiving it.

When the 145.825 MHz RS0ISS-4 packet digipeater is active aboard the ISS users can continue to send SSET test e-mail messages. PCSAT does work for a few lucky packets during mid-day passes. The next full sun operating period will not occur until the Fall.

See: http://www.ew.usna.edu/~bruninga/sset.html for more information on how you can participate in SSET.

[ANS thanks Bob, WB4APR for the above information]

ARISS Status Report for the Week of February 25, 2008

AMSAT News Service Bulletin 062.09
>From AMSAT HQ SILVER SPRING, MD.
March 2, 2008
To All RADIO AMATEURS
BID: $ANS-062.09

1. School Contacts

An ARISS contact took place with College Reydellet in Saint-Denis, Ile de La R�union on Monday, February 25. Approximately 550 students, ages 10-17, attend the school. ESA astronaut L�opold Eyharts, FX0STD /KE5FNO, participated in this contact which was conducted in French.

An ARISS contact has been scheduled for Lyc�e de la Borde Basse in Castres, France on Wednesday, March 5. In preparation for the contact, teachers will focus on science applications and the ISS. Activities planned include a visit to the Cit� de l�espace in Toulouse and a meeting with a scientist residing in Castres, founder of the �Terre et Espace� association (Earth & Space), who has volunteered to give a presentation to the students on work in space and astronaut training techniques. Students will be divided into different study groups according to personal interest in various related subjects such as the implementation and launch of ISS space modules, re-supply missions, life in micro-gravitational environments and experiments carried out onboard the ISS. Students will prepare questions in French and English on various subjects. ESA astronaut L�opold Eyharts, FX0STD/KE5FNO, plans

to participate in this contact.

2. Robspierre School Contact Successful

On Thursday, February 21, students at Robespierre Elementary School in Rueil Malmaison, France experienced an ARISS contact. Sixteen students asked one question each of ESA astronaut L�opold Eyharts, FX0STD/KE5FNO.
Approximately two hundred students, teachers, parents and others in the community attended. Prior to the contact, talks were given to the students about space, the Columbus module, amateur radio, AMSAT-France and ARISS. The national newspapers France Soir, le Parisien and Espace Magazine, and radio and television stations France Inter, RTL, Europe 1 covered the news.

3. ESA Press Release on Eyharts - ARISS Contacts

The European Space Agency (ESA) announced the ARISS contacts that ESA astronaut Leopold Eyharts will participate in. The notice was posted

on its Web site. See:
http://www.esa.int/SPECIALS/Columbus_Blog/SEM1JYVHJCF_0.html

4. ARISS International Team Meeting Held

On February 19, the monthly ARISS Team teleconference was held. Topics of discussion included the upcoming ARISS Face to Face Meeting, the Amateur Radio Working Group (ARWG) and SuitSat-2. Minutes have been posted to the ARISS Web site. See: http://www.rac.ca/ariss/arisstel2008-02-19.htm

5. ARISS Presentation at Embedded Systems Conference

ARISS member Steve Bible, N7HPR, will present the amateur radio satellite SuitSat-1 as a �teardown� subject for the Embedded Systems Conference in San Jose, California on April 16, 2008. He will also speak on the current development of SuitSat-2. See:
http://www.cmp-egevents.com/web/esv/event-highlights/teardowns?cid=ESCWK8

6. ARISS � One Reason to Love the ISS

On February 14, Universe Today published an article, �I Heart the ISS: Ten Reasons to Love the International Space Station.� Reason number 6 cites ARISS and EarthKAM as educational programs that the general public can participate in. See:
http://www.universetoday.com/2008/02/14/i-heart-the-iss-ten-reasons-to-love-the-international-space-station/

7. Crew Debrief Sessions

Two ISS crewmembers will participate in ARISS debrief sessions during the upcoming week. Space visitor Dr. Sheikh Muszaphar Shukor, 9W2MUS, is scheduled for Tuesday, February 26, and astronaut Dan Tani will participate in a short session on February 29.

[ANS thanks Carol, KB3LKI for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

73,
This week's ANS Editor,

JoAnne Maenpaa, K9JKM

Amateur Radio License Exam Preparation Software
Getting your Amateur Radio License has never been easier. Effective February 23, 2007 the FCC removed the Morse Code requirements for all Amateur Radio License Classes . Since that date, applicants for a Technician, General or Extra Class Amateur Radio License no longer have to demonstrate proficiency in Morse Code. You just have to pass the applicable written examination.

That's where we come in. Our amateur radio license exam preparation software serves as a training aid to help amateurs and prospective amateurs pass the Volunteer Examiner Coordinator's (VEC's) administered exam. When you can consistently pass the exams given by our exam preparation software, you will almost certainly pass an actual Volunteer Examiner Coordinator's (VEC's) administered exam.

Our amateur radio license exam preparation software uses the latest officially released Volunteer Examiner Coordinator's (VEC's) approved question pools. The program breaks the test into different sub-element. Integrated into the software are illustrations and Part 97 rules pertaining to the current question. The program tracks the progress of the tests taken. Once you have mastered each sub-element you are ready for the officially administered exam.

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
on board the spacecraft.

2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

* AMSAT Store Down for Upgrade
* AMSAT Block of Rooms at Dayton
* ARISS Status - 03 March 2008

SB SAT @ AMSAT $ANS-069.01
AO-51 March Schedule

AMSAT News Service Bulletin 069.01
From AMSAT HQ SILVER SPRING, MD.
March 9, 2008
To All RADIO AMATEURS
BID: $ANS-069.01

Last month we concentrated on L uplinks and S downlinks. This month we'd like to concentrate on U band downlinks. In response to recent discussions
on AMSAT-BB, we are going to try two separate weeks of dual repeaters.
Unlike the QRP restrictions we have had in the past, this time the only special restrictions are that regular users yield for university stations
that will be active on 27th. Please limit
contacts those dates to QSOs involving
at least one university station. If the second repeater is
not utilized, we may revert to digital operations.

The 435.150 repeater and 2401.200 downlinks may be temporarily suspended for
WOD telemetry download without notice. Generally this will only be for one
pass per day.

Regarding the graphic schedule, the software that does the schedule will
not allow for the proper display of some of the current modes or any
detailed information on special purposes. Please refer to the text page for
mode
change information.
http://www.amsat.org/amsat-new/echo/CTNews.php

March 2008 AO-51 (AMSAT Echo) Schedule

March 1 until March 31, subject to modification

March 1 - March 2

FM Repeater, V/US
Uplink: 145.920 MHz FM, NO PL Tone
Downlinks: 435.300 and 2401.200 MHz FM

March 3 - March 9

FM Repeater, V/U
Uplink: 145.920 MHz FM, NO PL Tone
Downlink: 435.300 MHz FM

FM Repeater, V/U
Uplink: 145.880 MHz FM, NO PL Tone
Downlink: 435.150 MHz FM

March 10 - March 16

FM Repeater, V/U
Uplink: 145.920 MHz FM, NO PL Tone
Downlink: 435.300 MHz FM

9k6 Digital L/U BBS and Telemetry
Uplink: 1268.700 MHz FM
Downlink: 435.150 MHz FM

March 17 - March 23

FM Repeater, V/US
Uplink: 145.920 MHz FM, NO PL Tone
Downlinks: 435.300 and 2401.200 MHz FM

March 24 - March 31

FM Repeater, V/U

Uplink: 145.920 MHz FM, NO PL Tone
Downlink: 435.300 MHz FM

FM Repeater, V/U (March 27th please yield to university stations)
Uplink: 145.880 MHz FM, NO PL Tone
Downlink: 435.150 MHz FM

SB SAT @ AMSAT $ANS-069.02
College Night Successful on AO-51

AMSAT News Service Bulletin 069.02
  From AMSAT HQ SILVER SPRING, MD.
March 9, 2008
To All RADIO AMATEURS
BID: $ANS-069.02

Jay, AA4FL reports that College Night was a success on AO-51. College stations
heard at the University Of Floriday (UF) during
the two evening passes (March 5 UTC)
were the University of Arkansas and a student
from the University of Kentucky. The
SEC was well represented! Contacts were made at UF by two students,
KI4LDJ (Dante) and N6WPV (Seth), and AA4FL (Jay), and included contacts with:
N0YK, N3UNM (Frostburg, MD, home of Frostburg state U), KI4VNV (UK student),
KB2HSH, KU4OS (mobile in Cocoa,FL), WD9EWK (portable in city park Phoenix),
W5YM (U ARK), N5AFV.

Thanks to all that participated. Look for us again on the next college night
on AO51, March 27th. Make sure to spread the word to college hams/club
stations you may know.

[ANS thanks Jay, AA4FL, for the above information]

/EX

SB SAT @ AMSAT $ANS-069.03
AO-16 Status Update

AMSAT News Service Bulletin 069.03
  From AMSAT HQ SILVER SPRING, MD.
March 9, 2008
To All RADIO AMATEURS

BID: $ANS-069.03

AO-16 is doing quite well in its current mode.

AO-16 is currently operational as a Voice Repeater (Downlink is double sideband.):
Uplink: 145.9200 MHz FM
Downlink   437.0260 MHz DSB (LSB and USB)

The plan is to continue this mode of voice operations "until further notice. "

AO-16 has been in full sunlight (no eclipse periods at all) for several months. That is about to change later this month! Short eclipse periods will begin at the end of March and will increase steadily until early July--at which point the eclipse periods will increase to about 26 minutes each orbit. We'll have to watch this old bird and its batteries as the eclipse periods increase.

It is possible that the long eclipse periods may necessitate the reduction of the 70 cm transmitter output; this is a manual process for AO-16, since the spacecraft isn't running any housekeeping software to do it "automagically." AO-16 is pretty loud at its current power setting, so some reduction should have little if any user impact. Observations and user reports will be especially helpful during April/May/June/July this year. In order to collect telemetry, we'll need to change the satellite into its digital mode from time to time. But this doesn't take long and therefore shouldn't interfere much with its operations as a voice satellite.

The S-band beacon is not operational at this time. The exact status of the S-band transmitter remains unknown; however, its last known status might be described as "suspect" or "semi-operational" at best. Given the age of the satellite (over 18 years!), For now, this falls into the "maybe we should leave well enough alone" category.

[ANS thanks Mark, N8MH, for the above information]

Keith Pugh, W5IU, will be manning the AMSAT booth at the Green Country Hamfest in Claremore, OK on the 14th and 15th of March. In addition to the booth there will be satellite demos and a forum.

AMSAT Executive Vice President Lee McLamb, KU4OS, will be at the Stuart Hamfest in Martin County, FL. Activities at the Stuart Hamfest include an AMSAT Booth and FM satellite demonstrations.

A full day of activities are planned for the 2008 AMSAT-DC Meeting and Space Seminar. Talks, demos, tutorials and socializing about amateur satellites and high-altitude balloon experiments will get underway starting at 1100 A.M. local on 15 March. The event will be held at the Historical Electronics Museum (HEM) at 1745 West Nursery Road, Linthicum, Maryland 21090 (near BWI airport). In Pioneer Hall. For more information, contact Pat Kilroy, n8pk@amsat.org

ARISS Status - 03 March 2008

AMSAT News Service Bulletin 069.07
From AMSAT HQ SILVER SPRING, MD.
March 9, 2008
To All RADIO AMATEURS
BID: $ANS-069.07

1. College Reydellet Contact Successful

On Monday, February 25, youth attending College Reydellet in Saint-Denis, Ile de La R�union experienced an Amateur Radio on the International Space Station (ARISS) contact with ESA astronaut L�opold Eyharts, FX0STD/KE5FNO. Ten students were able to ask one question each of the astronaut as approximately 75 students, teachers and parents looked on. Also in attendance were the Regional Director of Research and Technology (DRRT), the Colleges and Schools Supervisor and the Heads of educational institutions. At least part of the audio from this event was fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers successfully. Fifteen connections were made from 10 countries. Media coverage included RFO Radio, TV Antenne-Reunion (correspondent of TF1, France's national TV), private broadcaster Festival and the local newspapers Le Quotidien and Le Journal de l'ile. Photos have been posted on the ARISS-Europe Web site. See:
http://www.ariss-eu.org/2008_02_26.htm
Le Journal de l'ile article, in French, can be found here:
http://archives.clicanoo.com/index.php?page=article&id_article=175971&recherche=Reydellet+ARISS

2. France Soir Article on Robespierre Contact

Robespierre Elementary School in Rueil Malmaison, France participated in an Amateur Radio on the International Space Station (ARISS) contact on February 21.
France Soir covered news (in French) of the educational activity. Go to:
http://www.francesoir.fr/societe/2008/02/22/leopold-eyharts-en-direct-des-etoiles.html#Séquence_1

3. Crew Debrief Sessions to be Rescheduled

The February debrief sessions planned with astronaut Dan Tani, KD5DXE, and space visitor Dr. Sheikh Muszaphar Shukor, 9W2MUS, were cancelled. They will be rescheduled in the near future.

4. ARISS Presentation at NARCON 2008

The National Association of Rocketry�s National Convention, NARCON 2008, will be held March 14 � 16 in Rochester, Minnesota. Will Marchant, KC6ROL, will give a presentation on the Amateur Radio on the International Space Station (ARISS) educational outreach program during the seminar session. For more information, see:
http://www.narcon2008.org/event_info/seminars.htm

5. SuitSat-1 Article

On February 25, The Daily Galaxy ran an article on the amateur radio satellite SuitSat-1 which was deployed on February 3, 2006. To view the article, see:
http://www.dailygalaxy.com/my_weblog/2008/02/suitsat-one--th.html

6. Astronaut Training Status

Amateur Radio on the International Space Station (ARISS) training sessions are being planned for astronauts Nicole Stott, KE5GJN, Sandy Magnus, KE5FYE, and Bob Thirsk, VA3CSA. Magnus is expected to be a crewmember of Expedition 17/18, flying to the ISS on STS-126 in September 2008. Stott, a member of the Expedition 19 crew, will fly on STS-128 in May 2009 and Thirsk, a CSA astronaut, will follow the same month on a Soyuz flight.

[ANS thanks Carol, KB3LKI, for the above information]

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deborbited/returned satellites

TO ALL RADIO AMATEURS
BID: $ANS-073.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon that is
active. Each transponder has a different beacon.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

=====
MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Non-Operational

Uplinks: 145.850 MHz
           145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz

Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

AMSAT NEWS SERVICE
ANS-076

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:
* AMSAT Store Upgrade
* MIR +10
* AO-16 Report
* Satellite Shorts
* AMSAT-UK Colloquium - Call for Papers
* Satellite articles
* ARISS Status - 10 March 2008

SB SAT @ AMSAT $ANS-076.01
AMSAT Store Upgrade

AMSAT News Service Bulletin 076.01
   From AMSAT HQ SILVER SPRING, MD.
March 16, 2008
To All RADIO AMATEURS
BID: $ANS-076.01

The AMSAT store on the website is obtaining a long required upgrade for many reasons. During this period, you could normaly call Martha at HQ in Silver Spring, MD. Unfortunately, Martha is going on a vacation taking her away from duties until the 25th. Be patient until she returns or the Store re-opens for business as usual.

[ANS thanks Gould, WA4SXM, for the above information]

SB SAT @ AMSAT $ANS-076.02
MIR +10

AMSAT News Service Bulletin 076.02
From AMSAT HQ SILVER SPRING, MD.
March 16, 2008
To All RADIO AMATEURS
BID: $ANS-076.02

ISS Amateur Radio Status: March 11, 2008
By Miles Mann WF1F,
Slow Scan TV from Space Station Mir, 10 years later.
On December 12, 1998 the crew members of the Russian Space station Mir activated the Marex SSTV system. Over the next two years the system broadcasted over 20,000 SSTV images back to earth via Amateur Radio. te the 10 year anniversary of the successful imaging project, the Marx team is planning on upgrading our web page system to accommodate the many images that were transmitted during the projects 2 year run. In 1998 we just did not have the resources in place to handle the hundreds of images coming in every day. As a result only a small select on of the images were ever posted for public enjoyment.

SB SAT @ AMSAT $ANS-076.03
AO-16 Report

AMSAT News Service Bulletin 076.03
From AMSAT HQ SILVER SPRING, MD.
March 16, 2008
To All RADIO AMATEURS
BID: $ANS-076.03

The AO-16 Command Team invites radio amateurs to continue to use the voice mode of operations. Mark, N8MH says, "The plan is to continue this mode of voice operations until further notice."

AO-16 has been in full sunlight (no eclipse periods at all) for several months. That is about to change later this month! Short eclipse periods will begin at the end of March and will increase steadily until early July--at which point the eclipse periods will increase to about 26 minutes each orbit. We'll have to watch this old bird and its batteries as the eclipse periods increase.

The S-band beacon is not operational at this time. The exact status of the S-band transmitter remains unknown.

The AO-16 Command Team has updated the weekly satellite report entry for this satellite:

AO-16 PACSAT
Catalog number: 20439
Launch Date: January 22, 1990

Status: TESTING - VOICE
Current Mode: V/U

Uplink:
145.900 MHz RESERVED
145.920 MHz FM VOICE
145.940 MHz RESERVED
145.960 MHz RESERVED

Downlink: 437.026 MHz USB VOICE

[1200-baud PSK-MBL Telemetry Only]

Mode-S Beacon: 2401.1428 MHz [No Future Operations Planed]

Mode and Antenna Polarization:
U: RC 437.050 MHz RHCP
    PSK 437.026 MHz LHCP
V: Linear

[ANS thanks Mark, N8MH, for the above information]

Satellite Shorts

AMSAT News Service Bulletin 076.04
   From AMSAT HQ SILVER SPRING, MD.
March 16, 2008
To All RADIO AMATEURS
BID: $ANS-076.04

#1. AMSAT and TAPR will again have a combined Banquet during the 2008 Dayton Hamvention. Unfortunately the Air Force is no longer offering the museum for non-military events. The 2008 AMSAT/TAPR Banquet will be Friday night, May 16 at the Kohler Presidential Banquet Center in Kettering, OH. Banquet times, the menu and the cost will be announced shortly, but all are expected to be similar to past banquets. Mark you calendar for Friday, May 16 and join your AMSAT and TAPR friends for an enjoyable evening.

#2. The AMSAT Engineering video featuring Bob McGwier had to be moved. The new URL is mms://media.wmfd.com/amsat/EngMovie08.wmv Bob discusses the engineering team plans for the next year. They have a number of things on their plate and it looks like a productive year for AMSAT Engineering. Thanks to Rob and Gunther Meisse and WMFD for hosting the video. We have a number of other amateur videos in production.

#3. We are evaluating placing the current AO-51 mode on the front page of the AMSAT web site for a few weeks. We will change the display as the mode changes. You can see the entire month's schedule at http://www.amsat.org/amsat-new/echo/CTNews.php.

Thanks,
Gould

[ANS thanks Gould, WA4SXM, for the above information]

SB SAT @ AMSAT $ANS-076.05
AMSAT-UK Colloquium - Call for Papers

AMSAT News Service Bulletin 076.05
   From AMSAT HQ SILVER SPRING, MD.
March 16, 2008
To All RADIO AMATEURS
BID: $ANS-076.05

AMSAT-UK Colloquium - Call for Papers

This is the first call for speakers for the 22nd Amsat-UK Colloquium which will be held at Surrey University, Guildford, Surrey, U.K., from Friday 25th July to Sunday 27th July 2007.

Details of this and previous events can be found at:
http://www.uk.amsat.org/content/view/32/42/

Amsat-UK invite speakers, about amateur radio space and associated activities, for this event. They are also invited to submit papers for the "Proceedings" document which will be published at the same time but printed papers are not mandatory. We normally prefer authors to present talks themselves rather than having someone else give them in the authors' absence. We also welcome "unpresented" papers for the Proceedings document.

Offers of talks should be submitted as soon as possible; the final date for full documents to be received is late-June 2007 in order that the "Proceedings" document be available to participants.

Submissions should be sent *ONLY* to G4DPZ, via the following routes:

Internet e-mail: dave @ g4dpz dot me dot uk

SnailMail: QTHR from http://www.qrz.com

AMSAT-UK also invite anyone with requests for Program Topics to submit them as soon as possible to G4DPZ. Invitations for any papers on specific subjects will be included in the future call. Likewise if anyone knows of a good speaker, please send contact and other information to G4DPZ.

73

SB SAT @ AMSAT $ANS-076.06
Satellite articles

AMSAT News Service Bulletin 076.06
From AMSAT HQ SILVER SPRING, MD.
March 16, 2008
To All RADIO AMATEURS
BID: $ANS-076.06

Hi all,

I have published several articles in relation to ham satellites in AMSAT and other magazines such as URE, CQ-DL, Megahertz Magazine and several Webs. But most of them were in Spanish. I have translated them into English, you can find the following issues:

- The CJU antenna. It was designed by EB4DKA and EA4CYQ to improve the UHF reception with your HT, it is thought to uplink with your VHF mobile station. You will receive the UHF downlink in the same way a fix satellite station.

- The IOio antenna. It was designed by EA4CYQ to work V/U and U/V amateur satellites with an HT. It has an amazing performance, it is even better than the Arrow antenna in some features.

- A dual band portable yagui antenna. This is a very well known antenna into the amateur satellites world. Here you can find how to build it with normal stuff and an impressive performance.

- The EGGBEATER II and TPM II antennas. They were designed by Jerry K5OE. In this article I tell my experience at the beginning in the amateur satellites world and all the vicissitudes to work amateur satellites from my shack with the minimal equipment. Here you will find all the details to build these fantastic antennas.

- The 2.4GHz DISH ANTENNA. Taking advantage of my AO-40 experience I could go more deeply into the microwaves world. Here you can find all the details to build two different 2.4GHz dish feed systems, which you will be able to use in wireless terrestrial communications.

- The LINEAR TRANSPONDERS. A lot of amateur satellites use this system. This article will help you to understand how they work.

- HF or SATELLITES?. I try to demonstrate with this article that a satellite fix station is at least as good as an HF station. You will get the same performance with small antennas and low power out.

- The DATA CONNECTOR. This connector has much more possibilities than to be hooked to a TNC. In this article I study its features and I propose to use it with a PC soundcard, to receive meteorological satellites and I even propose to build a cross band repeater. You will be surprised about its possibilities.

- CIRCULAR POLARIZATION. If you want to know more about this kind of polarization and you want to see a comparative of VHF and UHF circular polarized commercial antennas, you should read this article.

- TRANSCEIVERS TO WORK SATELLITES. If you are thinking about setting up a fix satellite station, here you can find all the transceivers in the market and combinations between them to be successful.

- THE EA4CYQ SHACK. Here I describe my shack, perhaps it could be useful as a reference if you are thinking about setting up one.

- THE EA4CYQ LOG. If you have contacted with my station between June 1.996 and March 2.008, here you can find it. It is in call sign alphabetical order. We will upload it in the near future.

You can find them at the following Webs due to the generosity of Pedro EB4DKA and Rodolfo EA4CAX:

http://eb4dka.laserenadigital.com (also www.eb4dka.tk). This Web is devoted to ham satellites and Pedro has an impressive collection of photos, videos and interesting articles. He is an authority working in portable conditions.

http://personales.ya.com/ea4cax/ Rodolfo is specialized in LEO and Geostationary meteorological satellites.

O hope you enjoy this articles devoted to promote the amateur satellites.

Juan Antonio
EA4CYQ@amsat.org

SB SAT @ AMSAT $ANS-076.07
ARISS Status - 10 March 2008

AMSAT News Service Bulletin 076.07
From AMSAT HQ SILVER SPRING, MD.
March 10, 2008
To All RADIO AMATEURS
BID: $ANS-076.07

1. Lyc�e de la Borde Basse Contact Successful

An Amateur Radio on the International Space Station (ARISS) contact with Lyc�e de la Borde Basse in Castres, France took place on Wednesday, March 5. ESA astronaut L�opold Eyharts, FX0STD/KE5FNO, answered 10 questions posed to him by as many students. A representative from the ESA Education Office gave a presentation to the school and a photographer was present to cover this event. The contact audio was fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers, receiving 7 connections from 6 countries. La Depeche du Midi ran a Web story on the event. The article is written in French. See:
http://www.ladepeche.fr/article/2008/03/06/440113-Castres-Les-lyceens-en-direct-avec-l-espace.html

2. ARISS Face to Face Meeting to be Held in Moscow

The Amateur Radio on the International Space Station (ARISS) team will meet in Moscow, Russia this summer for its annual Face to Face Meeting. Delegates will arrive on July 15 for the July 17 -18 meeting. Plans are ongoing.

3. ARISS Crew Debrief Session

On Friday, March 7, a crew debrief was held with astronaut Dan Tani, KD5DXE. The Amateur Radio on the International Space Station (ARISS) team received feedback on the ARISS radio system onboard the ISS.

4. Astronaut Training Status

Two Amateur Radio on the International Space Station (ARISS) training sessions are planned for astronauts Nicole Stott, KE5GJN, and Sandy Magnus, KE5FYE, with Houston area school, Westbrook Intermediate. The training sessions, which are terrestrial-based amateur radio contacts using ARISS-equivalent equipment, are planned for Thursday, March 13 at approximately 14:50 and 15:15 UTC. Audio is expected to be fed into IRLP and EchoLink servers. Magnus is slated to be a crewmember of Expedition 17/18, flying to the ISS on STS-126 in September 2008. Stott, a member of the Expedition 19 crew, will fly on STS-128 in May 2009.

5. ARRL Article on AMSAT, ARISS

The American Radio Relay League (ARRL) ran a Web story covering the 2008 plans of the Radio Amateur Satellite Corporation (AMSAT). The Amateur Radio on the International Space Station (ARISS) educational outreach program and SuitSat-2 are included in this web story. See:
http://www.arrl.org/news/features/2008/03/05/10005?nc=1

[ANS thanks Carol, KB3LKI, for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

```
Current Mode: V/u

Uplink:   145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

PO-34 PANSAT
Catalog number: 25520
Launched: October 30, 1998

Status: Telemetry downloads only

Uplink/downlink: 436.500 MHz

Official Webpage: http://www.sp.nps.navy.mil/pansat/
[05092004]
=====
SO-33 SEDSAT-1
Catalog number: 25509
Launched: October 24, 1998

Status: Semi-operational

Downlink: 437.910 MHz FM (9600-baud FSK)

The satellite is not currently available for uplink transmissions and
the image and transponder recovery efforts have been unsuccessful.

For more information on SedSat-1 visit the satellite web site:
http://seds.uah.edu/projects/sedsat/sedsat.htm

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors

to AMSAT Project Funds, will be eligible to receive additional benefits.
Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the
memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

SB SAT @ AMSAT $ANS-083.01
AMSAT Notes Passing of Arthur C. Clarke

AMSAT News Service Bulletin 083.01
>From AMSAT HQ SILVER SPRING, MD.
March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.01

This week marked the passing of Arthur C. Clarke, author of more than 100 published books in which he foresaw the future of technology, promoted the possibilities of human innovation and exploration and combined these with the ability to explain these to non-scientific readers.

The most famous example is from 1945, when he first proposed the idea of communications satellites that could be based in geostationary orbits, which keep satellites in a fixed position relative to the ground.

Tom Clark, K3IO recalled, "You might be interested in knowing that Arthur was an AMSAT Life Member. His member number, quite fittingly, was LM-2001."

Tom continued, "In the 1970's and 80's, Arthur was a frequent visitor to NASA. He was listed in the Goddard phone director as a consultant in the LANDSAT group, and he also served as a consultant at NASA HQ. In the early 1980's (when I was AMSAT President), on a trip to Washington, Dick Daniels (W4PUJ), Jan King (W3GEY) and I made the presentation of honorary AMSAT LM-2001 to Arthur. He was most appreciative and spent a couple of hours talking with us about our being the "Wright Brothers" of the satellite world, building satellites in our basements and garages."

Arthur communicated with us several times in the years following that visit. He asked that his LM-2001 Journal subscription be sent in his name to a library in Sri Lanka.

[ANS thanks Tom, K3IO and the Washington Post for the above information]

SB SAT @ AMSAT $ANS-083.02
AO-51 Schedule Update - Dual Repeater Mode March 24-31

AMSAT News Service Bulletin 083.02
>From AMSAT HQ SILVER SPRING, MD.
March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.02

AO-51 will be in dual V/U repeater mode the week of March 24 - 31. Take advantage of the much less crowded second repeater. On Thursday, March 27, please attempt to contact the active University stations.

FM Repeater, V/U
Uplink: 145.920 MHz FM, NO PL Tone
Downlink: 435.300 MHz FM

FM Repeater, V/U (March 27th please yield to university stations)
Uplink: 145.880 MHz FM, NO PL Tone
Downlink: 435.150 MHz FM

On Wed morning March 26, the second repeater will be off for testing during a portion of the morning passes.

[ANS thanks Gould, WA4SXM, AO-51 Control Station for the above information]

/EX

SB SAT @ AMSAT $ANS-083.03
College Satellite Night March 27 on AO-51

AMSAT News Service Bulletin 083.03
>From AMSAT HQ SILVER SPRING, MD.

March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.03

College Satellite Night will be held Thursday March 27, 2008 (local time). AMSAT Operations is supporting this event by dedicating a second repeater onboard AO-51 to college operations only for this date. Previous events have had the colleges well represented on the air.

This event is a great opportunity for hams who are satellite active to interact with existing college operators and/or to elmer a new generation!

Do you know a college student who would find amateur satellites interesting and intellectually challenging? Have them as a guest at your station and introduce them to amateur radio in a way they will never forget.

AMSAT has a dedicated orbiting repeater set aside for the evening on satellite AO51 for this event:

Uplink: 145.880 MHz FM, NO PL Tone
Downlink: 435.150 MHz FM.

Even if you are not set-up for transmission please listen in. You can find satellite pass information for the evening at:
http://www.amsat.org/amsat-new/tools/predict/

Hope to see you on the birds!

[ANS thanks Drew, KO4MA, AMSAT-VP Operations and Dr. Jay Garlitz, AA4FL for the above information]

SB SAT @ AMSAT $ANS-083.04
GO-32 Satellite Carried Digital Messaging in Hospital Drill

AMSAT News Service Bulletin 083.04
>From AMSAT HQ SILVER SPRING, MD.
March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.04

On March 12 Shands hospital in Gainesville, FL conducted a simulated emergency communications drill. Students and faculty with the Gator Amateur Radio Club at the University of Florida participated.

The University of Florida Dental School club station, W4DFU, used their satellite ground station to distribute an e-mail test message though the GO-32 amateur radio satellite. This provided proof of concept in a disaster scenario to augment Amateur Radio voice communication if phone and internet services were down.

Keeping patient privacy laws in mind (HIPAA restrictions) they could not transmit sensitive personal or health related data via this mode. However, in support of the larger disaster scenario the satellite e-mail concept could be useful for getting list of supplies, reporting hazardous situations, and status reports.

A copy of the test message, sent entirely via GO-32, is included below as an example of the capability revealed by the Gator Amateur Radio Club:

```
>From:     W4DFU
To:       ALL
>Subject:  test March 12th, your input
Keywords:
----------------------------------------
To  : ALL
>From: W4DFU
Time: 124227UTC
Date: 12 Mar 2008
-----------------
```

Hello All,

W4DFU, the club station of the University of Florida http://www.gatorradio.org, is located at the University's Health Center which is part of the UF Shands Hospital complex (http://www.shands.org/hospitals/uf/).

Our club is involved today in a test of emergency communication at the hospital and we are sending this message as part of that effort. Please respond to our message and tell us where you are located and if you think GO32 and its group of users have emergency potential for relaying information in times of disaster where the Internet may not be available locally...and in which ways this could be of benefit where emergency voice communication could not...

Yours in public service through Amateur Radio

Dr. Jay Garlitz, AA4FL faculty advisor and trustee
Jeff Capehart, W4UFL, club station and repeater manager
Seth McNeill, N6WPV, club secretary
mcnese@ufl.edu

[ANS thanks Dr. Jay Garlitz, AA4FL and the Gator Amateur Radio Club at the University of Florida for the above information]

SB SAT @ AMSAT $ANS-083.05

AMSAT-DC Meeting Recap

AMSAT News Service Bulletin 083.05
>From AMSAT HQ SILVER SPRING, MD.
March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.05

AT ONE OF THE MOST INSPIRING annual local meetings to date, east coast AMSAT members learned how exciting and substantial the coming months will be as far as participating in experiments using Amateur Radio go in the stratosphere, in space, in workshops, in the public squares and in classrooms. Don't miss out on the good opportunities approaching. The time is NOW for you to start planning and practicing. Come, join the fun!

The http://patkilroy.com/amsat-dc/ web page is in the process of being updated with pictures here taken at the meeting by Art W4ART, Charlie K3VDB, and others as they come in, as well as notes taken by Bruce WA3SWJ, and various impressions offered by several others who attended.

We will recognize several contributing individuals by name soon!

THANK YOU to the presenters, to those who brought hardware for our hi-tech show 'n' tell, to those who helped publicize the event, to those who shared Pot Luck or munchie items, and those who helped with the room set up and strike. It was fun! You made this gathering inspiring and educational. You made this gathering one to remember!

[ANS thanks AMSAT Mid-Atlantic Metro-DC Area Coordinator Pat Kilroy, N8PK for the above information]

SB SAT @ AMSAT $ANS-083.06
OSCAR-11 Celebrates 24th Birthday

AMSAT News Service Bulletin 083.06
>From AMSAT HQ SILVER SPRING, MD.
March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.06

Clive, G3CWV noted, "OSCAR-11 celebrated its 24th birthday on 01 March 2008. It was designed, built and launched, within a time scale of six months, using commercially available components. Congratulations to Professor Sir Martin Sweeting G3YJO, his team at the University of Surrey and associated groups of radio amateurs, for their magnificient achievement."

Signal reports received from Peter ZL3TC, Mark KU7Z, John KB2HSH, Antonio EA1CXG, Edward BX1AD and Andrew VK5LAC indicate great variability in strength: sometimes very strong, sometimes undetectable, even at high elevations. Low signal strength was particularly noticeable at AOS and LOS.

The satellite is now in continuous sunlight, and this is expected to continue until mid March, when eclipses will start again. Unfortunately eclipses will then become a permanent feature of the orbit, which is likely to prevent any periods of sustained operation after March.

Listen for OSCAR-11's AFSK FM ASCII Telemetry on 145.826 MHz.

Refer to http://www.users.zetnet.co.uk/clivew/ for additional information.

[ANS thanks Clive, G3CWV for the above information]

SB SAT @ AMSAT $ANS-083.07
NASA Award for VK5ZAI

AMSAT News Service Bulletin 083.07
>From AMSAT HQ SILVER SPRING, MD.
March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.07

Congratulations are in order for Tony Hutchison VK5ZAI.

Known around the world for his involvement in facilitating amateur radio communications with orbiting space stations is Tony Hutchison VK5ZAI, who has just received a well deserved achievement award.

Tony is the Australian coordinator of the Amateur Radio on the International Space Station (ARISS) project is now the proud but humble recipient of a Group Achievement Award from NASA�s Lyndon B. Johnson Space Centre in Houston Texas.

The citation on the award certificate is �For providing sustained outstanding engineering support which has resulted in a record number of successful ISS amateur radio contacts�, and signed by the Johnson Space Centre Director, Michael Coats.

Tony VK5ZAI has for more than 15 years given many schools and groups the opportunity to talk with space station crew. A notable occasion was the Australian Scout Jamboree in January 2007 as part of the world scouting movement�s centenary.

His involvement began in 1993 by assisted South Australia�s Loxton High School students talk with Cosmonaut Alex Serabrov on the MIR space station.

In 1998 Tony handled most of the communications between Australian-born Astronaut Andy Thomas VK5MIR and his family during his flight on MIR.

Soon after he was invited to be one of nine-approved ARISS telebridge stations and began handling most of the private family contacts for the first three crews on the International Space Station, along with school contacts.

Tony has been involved in linking with school in many countries, and the development of IRLP and Echolink for ARISS contacts, plus the design of interface units used for ARISS telebridge contacts in Australia and Europe.

[ANS thanks Jim Linton, VK3PC and Amateur Radio Newsline 1597 for the above information]

Satellite Shorts From All Over

AMSAT News Service Bulletin 083.08
>From AMSAT HQ SILVER SPRING, MD.
March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.08

+ AMSAT Field Day rules have been uploaded to:
  http://www.amsat.org/amsat-new/awards/amsatfd.php
  They will appear in the next issue of the AMSAT Journal.
  Field Day will be June 28/29, 2008. Start preparing your Field Day stations and offer assistance to local clubs in assembling a station and instruct them in the best ways to operate the satellites.

+ We are moving the AMSAT Store to our own server in the AMSAT Office to give us more control over its operation. Rick Hambly, W2GPS and Dan Briner, AB3EN are working on getting the server, getting additional high speed lines into the office and getting the server software operational and tested. Martha will be back in the office on Wednesday

  March 25 to take any orders. We are looking at interim store solutions until our own AMSAT Store in operational in a few weeks.

+ AMSAT at the 2008 Dayton Hamvention! We are looking forward to participating in the 2008 Dayton Hamvention. We will be in our regular location right across from the ARRL area, plus we will have an additional booth space. We have a great lineup of speakers for the Saturday morning forum, final list to be released very soon. Bob McGwier, N4HY and his engineering team have promised us a great many new pieces of operational satellite hardware. Bob Davis, KF4KSS is building a full size Eagle space frame that will be at Dayton. An operational SDX that will be used in both SuitSat-2 and the HASP (High Altitude Student Platform) balloon project this summer. We are also looking at a terrestrial deployment of this transponder. We will also have a well equipped satellite demonstration area right outside the Ball Arena entrance operating all the amateur satellites passes Friday through Sunday. The AMSAT/TAPR Banquet will be Friday night at the Kohler Banquet Center. Menu and reservation information will be available in the next week or two. More information to follow.

+ Paul, VP9MU has released a general c/c++ astrodynamics library which includes basic astronomy routines. Next up will be the orbit propagators, and tracking routines. See:
http://homepage.mac.com/pclwillmott/GAL/index.html

+ Ben, N1WBV has released a guide focusing on etiquette and operational guidelines for single-channel FM satellites:
PDF (35K) http://www.innismir.net/etc/CourteousAO51_v1.1.pdf
DOC (38K) http://www.innismir.net/etc/CourteousAO51_v1.1.doc

+ The 34th Annual Eastern VHF-UHF Conference and Dinner Banquet will be held on April 18, 19 & 20th, 2008 at the Crowne Plaza Hotel in Enfield, CT. Please see the site for further information:
http://www.newsvhf.com/vhfconf.html

+ Clint, K6LCS invites readers to download and print out his 4-page tutorial, "Working Ham Sats with Your HT". If you have a print utility that makes brochures, you can get it all on one page, duplex printing. See:
http://homepage.mac.com/clintbradford/FileSharing1.html

[ANS thanks everyone for the above information]

SB SAT @ AMSAT $ANS-083.09
ARISS Status Report for the week of March 17, 2008

AMSAT News Service Bulletin 083.09
>From AMSAT HQ SILVER SPRING, MD.

March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.09

1. Upcoming School Contact

The Non Profit Organization Kodomo Support Project in Kyoto, Japan has been approved for an ARISS contact on Wednesday, March 26. The Project was established in 2006 to provide a network for parents and the community to support the social, mental and physical education of children. Participants will learn about wireless communication, space and science technology.

2. Lycee mixte Ren� Gosse Contact Successful

On Monday, March 10, students at Lycee mixte Ren� Gosse in Clermont L'Herault, France participated in an ARISS contact. The scheduled contact at 08:32 UTC did not take place due to Eyharts� work responsibilities. A request to reschedule the contact for the next orbit was made and the ARISS team quickly responded, setting up a telebridge station between Clermont l'Herault and Kingston, Australia. This second attempt was successful. Nine students were able to ask one question each of the astronaut. Approximately 50 students, ten teachers and more than 75 amateur radio operators were present. Audio was fed into the EchoLink server. Three regional and local newspapers covered the event, as well as 3 television broadcast stations.

3. Astronaut Training Status

On Thursday, March 13, an ARISS training session was held with Nicole Stott, KE5GJN, and Sandra Magnus, KE5FYE. Both astronauts successfully participated in terrestrial-based amateur radio contacts using ARISS-equivalent equipment with a Houston area school, Westbrook Intermediate.

An ARISS training session has been planned in late April for Canadian Space Agency astronaut Bob Thirsk, VA3CSA, and European Space Agency astronaut Frank DeWinne, ON1DWN.

4. Spaceflight Participant Receives Training on Amateur Radio

Richard Garriott, W5KWQ, will fly to the ISS in October 2008 as a spaceflight participant. He has received Russian training on the ARISS radio equipment and has posted an update covering this to his blog on his �Richard in Space� Web site (February 26 entries).
See: http://www.richardinspace.com/index.cfm?fuseaction=blog.welcome

5. ARISS Presentation Posted

Patricia Palazzolo, KB3NMS, a teacher at Upper St. Clair School in Pennsylvania, gave a presentation at the Radio Amateur Satellite Corporation (AMSAT) Space Symposium held in Pittsburgh in October 2007.

Her presentation, �Launching Dreams: The Long-term Impact of SAREX and ARISS on Student Achievement� covered her experiences with her students, the space program, the Shuttle Amateur Radio Experiment (SAREX) program and the ARISS program. She gives real life examples of the positive impact these experiences have had on her children. The presentation has been posted on the AMSAT Web site. See:

Black Hole RF Signatures at 29-47 MHz

AMSAT News Service Bulletin 083.10
>From AMSAT HQ SILVER SPRING, MD.
March 23, 2008
To All RADIO AMATEURS
BID: $ANS-083.10

In closing, here is an item to discuss on the 2M repeater drive to work which may be more interesting than traffic, the weather, or the signs and symptoms of a gallbladder attack.

This week the UniverseToday website revealed that radio astronomers may be able to detect the evaporation and death of a primordial black hole by listening for their radio frequency emissions in the 29-47 MHz range.

Primordial black holes are remnants of the Big Bang and they are predicted to be knocking around in our universe right now. If they were 10^12 kg or bigger at the time of creation, they have enough mass to have survived constant evaporation from Hawking radiation over the 14 billion years since the beginning of the cosmos.

But what happens when the tiny black hole evaporates so small that it becomes so tightly wrapped around the structure of a fifth dimension (other than the "normal" three spatial dimensions and one time dimension)? Well, the black hole will explosively show itself, much like an elastic band snapping, emitting energy. These final moments will signify that the primordial black hole has died. What makes this exciting is that researchers believe they can detect these events as spikes of radio wave emissions and the hunt has already begun.

Interestingly, if their predictions are correct, this could provide evidence for the existence of a fifth dimension, a dimension operating at scales of billionths of a nanometer. If this exotic emission can be received, and if it is corroborated by both antennae, this could be evidence of the string theory prediction that there are more dimensions than the four we currently understand.

The Eight-meter-wavelength Transient Array (ETA) run by Virginia Tech Departments of Electrical & Computer Engineering and Physics, and the Pisgah Astronomical Research Institute (PARI), is currently taking high cadence radio wave observations and has been doing so for the past few months. This basic-looking antenna system, in fields in Montgomery County, North Carolina, giving researchers a unique opportunity to see primordial black holes as they die.

See the full story at:

AO-51 Schedule - April 2008

AMSAT News Service Bulletin 090.01
  From AMSAT HQ SILVER SPRING, MD.
March 30, 2008
To All RADIO AMATEURS
BID: $ANS-090.01

The first week of April, AO-51 exits full illumination and our power budget will shrink considerably. The length of the eclipses will increase throughout the month, and we'll have to closely monitor our power situation. The schedule reflects this, as the BBS will be active throughout the first two weeks of the month. Additionally all AO-51 transmitters will be shut off on March 31st for a special Whole Orbit Data collection before full illumination ends.

As the month progresses we will schedule some time with the L/U BBS switched to a L/U repeater on an "as available" basis. Watch the webpage and ANS for announcements with further details.

April 2008 AO-51 Schedule

March 31 until April 30, subject to modification

March 31

All Transmitters OFF for WOD collection

April 1 - April 13

FM Repeater, V/U
Uplink: 145.920 MHz FM, NO PL Tone
Downlink: 435.300 MHz FM

9k6 Digital L/U BBS and Telemetry
Uplink: 1268.700 MHz FM
Downlink: 435.150 MHz FM

April 14 - April 30

FM Repeater, V/U
Uplink: 145.920 MHz FM, NO PL Tone
Downlink: 435.300 MHz FM

9k6 Digital L/U BBS and Telemetry
-- OR --
FM Repeater as available (exact dates to be announced)
Uplink: 1268.700 MHz FM
Downlink: 435.150 MHz FM

The AO-51 Operations Group is made up of AMSAT Members who are also AO-51 users.
The Operations Group works with the Command Team to create the monthly schedule for the satellite.

Satellite Demo Videos

AMSAT News Service Bulletin 090.02
From AMSAT HQ SILVER SPRING, MD.
March 30, 2008
To All RADIO AMATEURS
BID: $ANS-090.02

Robert Davies, KI4HXT, has produced a Windows media video showing how to work AO-27. Dave Jordan, AA4KN does the actual satellite demonstration during the 2008 Orlando Hamcation. Dave describes the Doppler shift that will occur during the pass, makes a number of contacts during the pass, then talks about setting up the Kenwood TH-D7A hand held for analog satellite operation. Drew Glasbrenner, KO4MA was doing a simultaneous demonstration and has a cameo appearance describing the arc of the upcoming pass. This is about a 20 minute video.

Bob McGwier, N4HY also has a video recorded in February that talks about the AMSAT Engineering activities during the next few months. Good information about a number of activities that are taking place this year. This is a 10 minute video.

Videos can be found at http://www.ki4hxt.com/id5.html

Thanks to Robert for hosting these.

We are working on additional videos, stay tuned.

SB SAT @ AMSAT $ANS-090.05
KiwiSAT Update

AMSAT News Service Bulletin 090.05
From AMSAT HQ SILVER SPRING, MD.
March 30, 2008
To All RADIO AMATEURS
BID: $ANS-090.05

KiwiSAT will now carry an additional special beacon which, it is planned, will
be used by radio amateurs around the world to collect data on atmospheric aberrations to assist with finite information collection directly associated with Global Warming concerns and Carbon Balance monitoring.

Details have yet to be finalized however the KiwiSAT structure has been modified
to incorporate a second 70cm monopole mounted on the Z- face.
A high level of filtering has been incorporated to minimize any desensitizing of
the on-board 70 cm receivers.
The operation of the beacon will be switched as required but will normally be ON
for whole orbit data collection.

The KiwiSAT linear flight transponder is currently transmitting from the Whangaparaoa area with beam antennas pointing South.

Transponder is inverting type to compensate for Doppler shift when in orbit.
* Transmit Power is 2 Watts PEP.
* Beacon frequency is 145.885 MHz
* Uplink is from 435.265 to 435.235 MHZ LSB (note the sideband)
* Down link is from 145.850 to 145.880 MHz USB
A test transmission on 435.2544 LSB came out at 145.860 USB.

As it's a linear transponder 30kHz wide, any mode can be used, but FM is discouraged (but not banned). Amateur stations are encouraged to try out the transponder. Try to better the previous distance of record of 292 km previously
achieved with the prototype transponder (same location/antenna).

Reports welcome to < amsat-zl(at)kiwisat.org >

[ANS thanks AMSAT-ZL for the above information]

ARISS Status - 24 March 2008

AMSAT News Service Bulletin 090.06
From AMSAT HQ SILVER SPRING, MD.
March 30, 2008
To All RADIO AMATEURS
BID: $ANS-090.06

1. Upcoming School Contacts

Shanghai Youth Centre of Science and Technology Education in Xuhui, Shanghai, China has been scheduled for an Amateur Radio on the International Space Station (ARISS) contact on Tuesday, April 1 at 08:10 UTC. The Centre is an after school educational facility that educates teenagers in science and technology. It has its own radio club, callsign BY4AY, which focuses on educating students in science and radio communications and in fabricating electronic toys.

2. Shukor Crew Debrief Scheduled

An Amateur Radio on the International Space Station (ARISS) crew debrief was scheduled for Dr. Sheikh Muszaphar Shukor, 9W2MUS, on Tuesday, March 25. The spaceflight participant performed 5 contacts with Malaysian school children while onboard the ISS in October 2007.

3. Garriott to Participate in ARISS Contacts

Space Adventures has posted an article covering the educational activities that Richard Garriott, W5KWQ, has planned while he is onboard the International Space Station. Inspiring children at the Challenger Learning Centers and taking part in amateur radio contacts are among the activities in which he plans to participate. See:
http://www.spaceadventures.com/index.cfm?fuseaction=news.viewnews&newsid=599

4. Amateur Radio Stations in Colorado Air and Space Museum

In promoting education, science and technology, Wings over the Rockies Air and Space Museum in Denver, Colorado has included amateur radio stations in its Avionics display and efforts are well under way in setting up a station, callsign K0WAR, in the International Space Station module exhibit. See:
http://wings.rmhcn.org/

5. ARISS International Team Meeting Held

The Amateur Radio on the International Space Station (ARISS) monthly teleconference was held on Tuesday, March 18. Topics of discussion included the upcoming Moscow meeting, the ARISS nominating committee and SuitSat-2. Minutes have been posted. See: http://www.rac.ca/ariss/arisstel2008-03-18.htm

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deborbited/returned satellites

AMSAT NEWS SERVICE BULLETIN 087.S1 FROM AMSAT HQ
SILVER SPRING, MD, March 27, 2008
TO ALL RADIO AMATEURS
BID: $ANS-087.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink:   145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz
```

```
Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Non-Operational

Uplinks: 145.850 MHz
           145.925 MHz 9600-baud FSK
Downlink: 437.325 MHz

Broadcast callsign: MYSAT3-11
BBS: MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deborbited/returned satellites

AMSAT NEWS SERVICE BULLETIN 094.S1 FROM AMSAT HQ
SILVER SPRING, MD, April 03, 2008
TO ALL RADIO AMATEURS
BID: $ANS-094.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW

```
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink:   435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon:  145.859330 MHZ CW
Dutch Beacon:   145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.
[05282007]
=====
FO-29 JAS-2
Catalog number: 24278
Launch Date: August 17, 1996

Status: Operational - check operational schedule for current times!!

Current Mode: V/u

Voice/CW Mode JA
Uplink: 145.90 to 146.00 MHz CW/LSB
Downlink: 435.80 to 435.90 MHz CW/USB
Beacon: 435.795 MHz

Digital Mode JD

Uplinks: 145.850 MHz FM
          145.870 MHz FM
          145.910 MHz FM
Downlink: 435.910 MHz 1200-baud BPSK or 9600-baud FSK
Callsign: 8J1JCS
Digitalker: 435.910 MHz

Mode and Antenna Polarization:

=====
MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Non-Operational

Uplinks:   145.850 MHz
           145.925 MHz 9600-baud FSK
Downlink:  437.325 MHz

Broadcast callsign: MYSAT3-11
BBS:                MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to
commercial
land and weather imaging payloads offers FM and FSK Amateur Radio
communica-
tion.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a
collaborative effort between the Malaysian government and Surrey
Satellite
Technology Ltd.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)
- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the

memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

AMSAT NEWS SERVICE
ANS-097

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:
* Dayton Forums Schedule
* AMSAT Booth Volunteers
* DelfiC3 Update
* AMSAT Room Block at Dayton

* AO-51 Update
* ARISS Status - 24 March 2008

SB SAT @ AMSAT $ANS-097.01
Dayton Forums Schedule

AMSAT News Service Bulletin 097.01
From AMSAT HQ SILVER SPRING, MD.
April 6, 2008
To All RADIO AMATEURS
BID: $ANS-097.01

AMSAT Forum at Dayton Hamvention 0900-1130 Saturday, May 17
Forum Room 5
We have a great lineup of speakers for the AMSAT Fourm at Dayton this year. The forum will concentrate on discussing AMSAT projects and activites for this year.

Moderator: Barry A. Baines, WD4ASW AMSAT Corporate Secretary & VP-Special Projects

Rick Hambly, W2GPS AMSAT President and Robert Davis, KF4KSS AMSAT Director-Spacecraft Integration and Lab Manager, "AMSAT Update". Rick will present a status report on the Intelsat Negotiations, a brief update on Eagle, and AMSAT-DL's Phase 3-E Project. Bob will provide an overview of AMSAT's new Integration Lab in Pocomoke, MD as well as discuss the HASP (High Altitude Student Payload) and Cubesat Projects that are under development at the Lab.

Gould Smith, WA4SXM, AMSAT VP-Member & User Services, Andrew Glasbrenner, KO4MA AMSAT VP-Operations, and Mark Hammond, N8MH AMSAT Command Station, "AMSAT Satellite Operations Update" which will provide an overview of AO-51 as well as highlight how AO-16 has been reconfigured as a voice repeater satellite.

Matt Ettus, N2MJI, ACP System Engineer and Michelle Thompson, W5NYV ACP Ground Station Development Engineer, "AMSAT's Advanced Communications Package (ACP)". Matt and Michelle will provide an overview of the new communications system currently under development for Eagle and a potential payload package to be placed on a commercial geostationary satellite. ACP is designed to provide emergency communications using portable ground stations as well as make it possible for amateurs living in areas with CC&R restrictions to be able to communicate via our next generation satellite. They will explain why ACP is being developed and discuss both the work being done on the payload as well as the ground station component that is being developed concurrently.

Frank Bauer, KA3HDO AMSAT Director-Manned Space Programs, "A Ham Radio Operator's View of ARISS". Frank will outline several new initiatives under development for Amateur Radio on the International Space Station (ARISS) that will interest amateur radio operators as well as provide an overview of SuitSat-2 currently under development.

[ANS thanks Gould, WA4SXM, for the above information]

AMSAT Booth Volunteers for Dayton 2008

I am looking for volunteers to help in the AMSAT booth during the 2008 Dayton Hamvention, May 16-18. I would like people to volunteer for 2 hour shifts on Friday, Saturday and Sunday. Multiple shifts are welcome. I also need help with booth setup and take down on Thursday May 15 and Sunday May 18. With enough people we have been able to setup and take down the booth in 3 - 4 hours (or less). Please volunteer to Gould, WA4SXM at his callsign@amsat.org. This is a great opportunity to give back to AMSAT and to have an enjoyable time talking with other AMSAT members and future members.

[ANS thanks Gould, WA4SXM, for the above information]

To All RADIO AMATEURS
BID: $ANS-097.03

DelfiC3 Provisional launch date April 21st

April 4th, 2008
Greetings from the clean room at Sriharikota!

The Delfi-C3 checkout team has safely arrived at the launch site in India, and we are currently performing all checks on the spacecraft.

So far, everything goes as planned and we have found no problems. Unfortunately, photography is not allowed on the base so you'll have to use your imagination for now. Meanwhile, we will try to keep you updated by posting text-only blog entries.

At this very moment, the team is building up the satellite into launch configuration, which means attaching the solar panels, the wireless sun sensors, and applying the final pieces of thermal tape and locking glue. All major health checks have been successfully completed up to this point so we know the spacecraft is in good health.

The linear transponder was tested for the last time before launch, and it worked just fine.
Frequencies:
* Primary telemetry downlink: 145.870 MHz 1200 Baud BPSK AX.25 400mW
* Backup telemetry downlink: 145.930 MHz 1200 Baud BPSK AX.25 400mW
* Linear transponder passband downlink: 145.880 - 145.920 MHz (inverting) 400mW PEP
* Linear transponder passband uplink: 435.570 - 435.530 MHz
* Transponder mode beacon: 145.870 MHz CW (10dB below transponder PEP)

Monitor http://www.delfic3.nl/photoblog/ for updates!

[ANS thanks Wouter Jan Ubbels VU/PE4WJ for the above information]

SB SAT @ AMSAT $ANS-097.05
AO-51 Update

AMSAT News Service Bulletin 097.05
From AMSAT HQ SILVER SPRING, MD.
April 6, 2008
To All RADIO AMATEURS

BID: $ANS-097.05

AO-51 is running less power than last week.

Gould, WA4SXM, AO-51 Command station reported that the transmitter power levels on AO-51 have been reduced.

1) The SQRX receiver is on for L band uplink for the bulletin board
2) We are starting to enter a new eclipse cycle this week.

```
TX B (analog)  is 700 mW  (was 820 mW)
TX A (digital) is 550 mW  (was 550 mW)
```

We will reduce power slowly until mid June (eclipse length maximum), then slowly increase it until early Sept when we will again enter a no eclipse period for a number of months.

[ANS thanks Gould, WA4SXM for the above information]

Amateur Radio on the International Space Station (ARISS) Status Report

1.   Upcoming School Contacts

An Amateur Radio on the International Space Station (ARISS) contact has been scheduled with Osnovna skola Pazin in Pazin, Croatia on Monday, April 7 at 14:52 UTC. Eight hundred students are enrolled at the school which has offered technical classes in robotics, electronics and computer science for the past ten years. Students from Pazin's two high schools are also expected to attend this event. The schools hope to pique the students' interest in space and electronics through this educational activity.

2.   Kodomo Contact Successful

Youth from the Kodomo Support Project in Kyoto, Japan participated in a successful Amateur Radio on the International Space Station (ARISS) contact on Wednesday, March 26. One hundred thirty parents and community members watched as eighteen children asked astronaut Garrett Reisman, KE5HAE, twenty questions before the ISS went over the horizon. Three television stations, including NHK, the Japan Broadcasting Corporation, and seven newspapers covered the event. To view a video of the contact, go to: http://www.ariss.jp/kyoto/Kyoto.wmv

3. Shukor Crew Debrief Held

An Amateur Radio on the International Space Station (ARISS) crew debrief was held on Tuesday, March 25. Spaceflight participant Sheikh Muszaphar Shukor, 9W2MUS provided the team with feedback on his experience with ARISS contacts while onboard the ISS.

4. Articles Cover Upcoming Garriott Activities

Articles have been posted covering the educational activities that Richard Garriott, W5KWQ, has planned while onboard the International Space Station. These activities include contacting children at the Challenger Learning Centers and taking part in amateur radio contacts. Prior to flight, children can take part in a contest creating a design for a patch. Spaceref.com and the Challenger Center articles may be viewed here: http://www.spaceref.com/news/viewpr.html?pid=25010
http://www.challenger.org/programs/garriottdownlinks.cfm

5. Astronaut Training Status

An Amateur Radio on the International Space Station (ARISS) training session has been planned for astronauts Bob Thirsk, VA3CSA, and Chris Hadfield, KC5RNJ/VA3OOG, on Thursday, April 17. Thirsk is a scheduled crew member on Expedition 19; Hadfield is his back-up.

[ANS thanks Carol, KB3LKI, for the above information]

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink:   145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

Launch Date: January 22, 1990

Status: Non-Operational

Downlink: 437.104 MHz SSB 1200 Baud PSK AX.25
[05012006]
=====
DO-17 Dove
Catalog Number: 20440
Launch Date: January 22, 1990

Status: Non-operational.

Downlink:  145.825 MHz FM 1200 Baud AFSK
Beacon:   2401.220 MHz
[05012006]
=====
UO-14 UoSAT-3
Catalog number: 20437
Launched: January 22, 1990

Status: Non-operational

Uplink:   145.975 MHz FM
Downlink: 435.070 MHz FM
[05092004]
=====
FO-12 Fuji-OSCAR 12
Catalog Number: 16909
Launch Date: August 12, 1986

Status: Non-Operational

Mode V/U (J) Linear Transponder (Inverting): Non-Operational
Uplink:  145.9000 - 146.0000 MHz SSB/CW
Downlink 435.8000 - 435.9000 MHz SSB/CW

Mode V/U (J) Packet: Non-Operational
Uplink:  145.8500 MHz MFSK 1200 BPS
Uplink:  145.8700 MHz MFSK 1200 BPS
Uplink:  145.8900 MHz MFSK 1200 BPS
Uplink:  145.9100 MHz MFSK 1200 BPS

Downlink 435.9100 MHz PSK 1200 BPS

Telemetry Beacon: 435.7950 MHz SSB/CW
[01152007]
=====
AO-10 OSCAR 10
Catalog number: 14129
Launch Date: June 16, 1983

Status: Non-operational
```

```
Uplink:   435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB

Beacon:   145.810 MHz (unmodulated carrier)

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html
[05092004]
=====
AO-8 AMSAT-OSCAR 8
Catalog Number: 10703
Launch Date: March 3, 1978

Status: Non-Operational

Mode V/U (J) Linear Transponder (Non-Inverting): Non-Operational
Uplink:  145.9000 - 146.0000 MHz SSB/CW
Downlink 435.1990 - 435.2000 MHz SSB/CW

Mode V/U (J) TLM Beacon: Non-Operational
Downlink 435.0950 MHz CW

Mode V/A (A) Linear Transponder (Non-Inverting): Non-Operational
Uplink:  145.8500 - 145.9000 MHz SSB/CW
Downlink  29.4000 -  29.5000 MHz SSB/CW

Mode V/A (A) TLM Beacon: Non-Operational
Downlink 29.4020 MHz CW
[01152007]
=====
AO-6 AMSAT-OSCAR 6
Catalog Number: 06236
Launch Date: October 15, 1972

Status: Non-Operational

Uplink:   145.9000 - 146.0000 MHz SSB/CW
Downlink:  29.4500 -  29.5500 MHz SSB/CW
Beacons:   29.450 MHz
          435.100 MHz
[01312008]
=====
AO-5 Australis-OSCAR 5
Catalog Number: 04321
Launch Date: January 23, 1970

Status: Non-Operational

Telemetry Beacons: 144.0500 MHz CW
                    29.4500 MHz CW
[01152007]
=====
OSCAR III
Catalog Number: 01293
Launch Date: March 09, 1965

Status: Non-Operational

Uplink:   145.9750 - 146.0250 MHz SSB/CW
Downlink: 144.3250 - 144.3750 MHz SSB/CW
[01012007]
=====
RS-15 RADIO SPORT RS-15
Catalog number: 23439
Launch Date: December 26, 1994

Status: Non-operational

Uplink:   145.858 to 145.898 MHz CW/USB
Downlink:  29.354 to  29.394 MHz CW/USB

Beacon 1:  29.352 MHz (intermittent)
Beacon 2:  29.398 MHz

SSB meeting frequency: 29.380 MHz (unofficial)
[06202004]

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the
memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

AMSAT NEWS SERVICE
ANS-104

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* AMSAT Web Updates Highlight Dayton Activities
* AMSAT/TAPR Banquet at Dayton
* AO-16 Status Update
* DelfiC3 Update
* Houston AMSAT Net Audio Available on Podcast
* Scotland Calling Via Satellite
* TAPR Digital Communications Conference
* 42nd Annual CSVHFS Conference Call for Papers
* ARISS Status Report for the Week of April 7, 2008

AMSAT Web Updates Highlight Dayton Activities

AMSAT News Service Bulletin 104.01
>From AMSAT HQ SILVER SPRING, MD.
April 13, 2008
To All RADIO AMATEURS
BID: $ANS-104.01

The AMSAT web site now contains information about AMSAT activities during the 2008 Dayton Hamvention.

Go to http://www.amsat.org and use the new Dayton button on the left hand navigation area or go directly there using this URL:
http://www.amsat.org/amsat-new/hamvention/2008/Dayton2008.php.

On the site you can find out about the:
+ AMSAT/TAPR Banquet
+ AMSAT Forum
+ Activities at the Booth
+ Thursday Pizza n' Suds
+ New AMSAT Offerings and displays at the booth

This will be a great opportunity to find out up to date information about what is going on at AMSAT as well as talk with your Officers and Board members. There will be a large outside satellite demonstration area and a daily "Introduction to Satellites" talk.

Here is a summary of the AMSAT offerings at the Booth:

Publications

Getting Started with Amateur Satellites (***Updated 2008) - $15
Frequency chart (2008 Update) - $5
Digital Satellite and Telemetry Guide (2005)
  - $20 Guide with disk $30 (** Special)
AO-51 Operation, Development and Specifications (2005) - $20
Proceedings of the AMSAT-NA 2006 Space Symposium - $20

Software & CDs

SatPC32 - $40 (**** Dayton Special normally $45)
InstantTrack - $20 (**** Dayton Special normally $30)
MacDoppler - $80 AMSAT Members/ $100 others
NEW* DVD of 2004, 2005, 2007 Symposia. Papers/PowerPoint/audio - $30
NEW* Digital Disk with WiSP + digital files - $20

Apparel

NEW* AMSAT blue Golf Shirts - $30
NEW* AMSAT gold tee shirts $20
NEW* AMSAT Hats - $10
NEW* AMSAT blue long sleeve tee shirts $20
old AMSAT golf shirts $20
old AMSAT/Eagle Tee Shirts - $10

Hardware

LVB Tracker enclosure $50
LVB Tracker bare board $20
LVB Tracker box (complete built kit) $200
AMSAT 2 GB Flash drive $25 (***Dayton Special) normally $30
Arrow Antenna w/Duplexer - $139.00

Miscellaneous Merchandise You Can't Live Without

NEW* AMSAT lapel pin (***NEW***) $10
AMSAT measuring tape free with membership free, purchase $5
30th Anniversary AO-7 QSL Cards (**** Dayton Special)
  - 100 cards - $5.00, 250 for $10
Eagle & ARISS Patches - $7.00
Eagle Decals - $5.00
$5 donation - 3 AMSAT Magnets or 2 AMSAT Pens
AMSAT computer backpacks - $30 (*** Dayton special)
AMSAT clocks $10

SB SAT @ AMSAT $ANS-104.02
AMSAT/TAPR Banquet at Dayton

AMSAT News Service Bulletin 104.02
>From AMSAT HQ SILVER SPRING, MD.
April 13, 2008
To All RADIO AMATEURS
BID: $ANS-104.02

The second annual AMSAT/TAPR Banquet during Dayton Hamvention will be held Friday evening at the Kohler Presidental Banquet Center, Kettering, OH [just south of Dayton]. The evening will begin with a cash bar at 6:30 PM. Dinner will be served at 7:15. The Banquet Center has a reputation for good food and service, so don't miss this event.

Maps to the AMSAT/TAPR Banquet will be available at the AMSAT booth. Additional information and coordinates are posted on the AMSAT web site under the Dayton 2008 area.

The price for the dinner is $25.00 per person and includes a salad, entree, sides, desert, tax and gratuity. Coffee, tea and iced tea are included. Wine, beer and mixed drinks are available at the cash bar before and during the meal.

Reservations are required and must be made by Monday, 12 May 2008. Please contact Martha (martha@amsat.org) at the AMSAT office for information or call to make reservations. You can reach Martha from 10:00am to 6:00pm EDT at (301) 589-6062, or in the US toll free at (888)322-6728.

Banquet Menu
Fresh mixed green salad with assorted dressings
Roast Prime Rib of Beef au jus - carved on site
Marinated Roasted Garlic Rosemary Chicken Breast in lemon butter sauce
Salmon with Newburg sauce
Whipped potatoes
Normandy blended green beans
Fresh fruit bowl
Roll and butter
Coffee/ iced tea/ water
Assorted pies

[ANS thanks Gould, WA4SXM for the above information]

SB SAT @ AMSAT $ANS-104.03
AO-16 Status Update

AMSAT News Service Bulletin 104.03
>From AMSAT HQ SILVER SPRING, MD.

April 13, 2008
To All RADIO AMATEURS
BID: $ANS-104.03

Mark, N8MH reporting on behalf of the AO-16 control team says that the satellite continues to operate well in its new voice configuration. Use these frequencies to access the satellite:
+ Uplink: 145.920 MHz FM
+ Downlink: 437.026 MHz DSB (LSB and USB)

After several months of continuous illumination, AO-16 is again experiencing short periods of eclipse. Recent telemetry indicates that the spacecraft temperatures are decreasing a bit as a result.

As the eclipse periods of AO-16 continue to increase in the coming months, we must continue to monitor the spacecraft power budget. Spacecraft control is now limited to the Microsat Boot Loader (MBL). Therefore, the power budget of AO-16 is managed by varying manually the output power of the transmitter.

Users of AO-16 are encouraged to report any aberrant operations by either posting to the AMSAT-BB or by emailing the command team at n8mh@amsat.org. �Aberrant operations� might include the following:

complete loss of signal from the spacecraft or significant change in the transmitter frequency.

We are grateful to see significant activity on AO-16!

[ANS thanks Mark, N8MH for the above information]

SB SAT @ AMSAT $ANS-104.04
DelfiC3 Update

AMSAT News Service Bulletin 104.04
>From AMSAT HQ SILVER SPRING, MD.
April 13, 2008
To All RADIO AMATEURS
BID: $ANS-104.04

The DelfiC3 launch preparation team has arrived back at the Delft University from launch preparations in India. Prior to departure they performed the final steps of preparing Delfi-C3 for launch.

Delfi-C3 has been placed in its X-POD and left in the cleanroom at Sriharikota. All the checks and tests have been performed to satisfaction and the team is convinced that Delfi-C3 is completely ready for a launch. Updates are posted at http://www.delfic3.nl.

The DelfiC3 team has posted an English PDF version of a presentation

on the Delfi-C3 satellite at:
http://www.delfic3.nl/forum/showthread.php?p=2375#post2375

42nd Annual CSVHFS Conference Call for Papers

AMSAT News Service Bulletin 104.08
>From AMSAT HQ SILVER SPRING, MD.
April 13, 2008
To All RADIO AMATEURS
BID: $ANS-104.08

The Central States VHF Society is calling for the submission of papers and presentations for the upcoming 42nd Annual Central States VHF Society Conference to be held in Wichita, KS, 24-26 July 2008. Papers and presentations are solicited on both the technical and operational aspects of VHF, UHF and Microwave weak signal amateur radio. Some suggested areas of interest are:

* Antennas including Modeling/Design, Arrays, and Control;
* Construction of Equipment, such as Transmitters, Receivers, and Transverters
* RF power amps
* Pre-amplifiers (low noise)
* Test Equipment including Homebrew, Using, and Making Measurements
* Operating including Contesting, Roving, and DXpeditions
* Propagation including Ducting, Sporadic E, Tropospheric and Meteor Scatter, etc.
* Software-defined Radio (SDR)
* Digital Modes WSJT, JT65, etc.
* EME
* Digital Signal Processing (DSP)
* Regulatory topics

The deadline for the submission of papers and presentations is 15 May. See http://www.csvhfs.org/conference/callforpapers.html for more information

[ANS thanks the CSVHFS for the above information]

SB SAT @ AMSAT $ANS-104.09
ARISS Status Report for the Week of April 7, 2008

AMSAT News Service Bulletin 104.09
>From AMSAT HQ SILVER SPRING, MD.
April 13, 2008
To All RADIO AMATEURS
BID: $ANS-104.09

1. School Contacts

An ARISS contact was held with Osnovna skola Pazin in Pazin, Croatia on Monday, April 7. Eight hundred students are enrolled at the school which has offered technical classes in robotics, electronics and computer science for the past ten years. Students from Pazin's two high schools are also expected to attend this event. The schools hope to pique the students' interest in space and electronics through this educational activity. The audio for this event will be fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers.

An ARISS contact has been scheduled with Han Gwang Boys & Girls High School in Pyeong Taek City, Republic of Korea on Sunday, April 13. It has an amateur radio club station, DS0IC which is the largest school club station in Korea with approximately 150 operators (100 students and 50 teachers). South Korean space visitor Yi So-yeon plans to speak with the high school youth during this event.

Central Middle School in Parsippany, New Jersey, has been slated for an ARISS contact on Monday, April 14 at 17:05 UTC. An essay and presentation contest will be held to determine which students will speak with the astronaut. The New Providence Amateur Radio Club will assist with the contact. The event will be available through a live transmission to all local schools using amateur band fast scan television.

An ARISS contact has been scheduled with the National Science Museum of Korea on Thursday, April 17. The Museum is an umbrella organization of the Ministry of Education, Science and Technology. Spaceflight participant Yi So-yeon will participate in this educational activity.

2. Shanghai Students Experience ARISS Contact

On Tuesday, April 1, students attending the Shanghai Youth Centre of Science and Technology Education in Xuhui, Shanghai, China participated in an ARISS contact. Astronaut Garrett Reisman, KE5HAE, answered 8 questions posed to him by eight children as an audience of approximately

300 people looked on. Four television station and 8 newspapers covered the event.

3. Debrief Scheduled for Eyharts

The ARISS team has been scheduled for an Expedition 16 crew debrief with Leopold Eyharts, KE5FNO/FX0STD on Monday, April 7.

4. DLN ARISS Module Status

A draft version of the Digital Learning Network (DLN) ARISS module will be ready for review by the end of May 2008. The module will provide grades K-12 with a foundation of what amateur radio is and how it is used, information on NASA and ARISS and will incorporate demonstrations from ARISS lesson plans. It will also highlight special projects such as SuitSat-2. The DLN module will provide education resource links to be used pre- and post-ARISS contact and will give information on how to apply for a contact.

5. Christa McAuliffe Planetarium Radio Station

Six staff members at the Christa McAuliffe Planetarium in Concord, New Hampshire passed their amateur radio exams. Two made the General class; the rest Technician.

An amateur radio station will be set up at the planetarium on May 3 which will be capable of operating from HF to UHF and will have an antenna system for working satellites. The planetarium is home to the NASA Educator Resource Center (ERC) for New Hampshire.

[ANS thanks Carol, KB3LKI for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

73,
This week's ANS Editor,
JoAnne Maenpaa, K9JKM

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.

2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

Catalog Number: 20440
Launch Date: January 22, 1990

Status: Non-operational.

Downlink:  145.825 MHz FM 1200 Baud AFSK
Beacon:   2401.220 MHz
[05012006]
=====
UO-14 UoSAT-3
Catalog number: 20437
Launched: January 22, 1990

Status: Non-operational

Uplink:   145.975 MHz FM
Downlink: 435.070 MHz FM
[05092004]
=====
FO-12 Fuji-OSCAR 12
Catalog Number: 16909
```

```
Launch Date: August 12, 1986

Status: Non-Operational

Mode V/U (J) Linear Transponder (Inverting): Non-Operational
Uplink:  145.9000 - 146.0000 MHz SSB/CW
Downlink 435.8000 - 435.9000 MHz SSB/CW

Mode V/U (J) Packet: Non-Operational
Uplink:  145.8500 MHz MFSK 1200 BPS
Uplink:  145.8700 MHz MFSK 1200 BPS
Uplink:  145.8900 MHz MFSK 1200 BPS
Uplink:  145.9100 MHz MFSK 1200 BPS

Downlink 435.9100 MHz PSK 1200 BPS

Telemetry Beacon: 435.7950 MHz SSB/CW
[01152007]
=====
AO-10 OSCAR 10
Catalog number: 14129
Launch Date: June 16, 1983

Status: Non-operational

Uplink:   435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB

Beacon:   145.810 MHz (unmodulated carrier)

W4SM has more information about the satellite at the following URL:
http://www.cstone.net/~w4sm/AO-10.html
[05092004]
=====
AO-8 AMSAT-OSCAR 8
Catalog Number: 10703
Launch Date: March 3, 1978

Status: Non-Operational

Mode V/U (J) Linear Transponder (Non-Inverting): Non-Operational
Uplink:  145.9000 - 146.0000 MHz SSB/CW
Downlink 435.1990 - 435.2000 MHz SSB/CW

Mode V/U (J) TLM Beacon: Non-Operational
Downlink 435.0950 MHz CW

Mode V/A (A) Linear Transponder (Non-Inverting): Non-Operational
Uplink:  145.8500 - 145.9000 MHz SSB/CW
Downlink  29.4000 -  29.5000 MHz SSB/CW

Mode V/A (A) TLM Beacon: Non-Operational
Downlink 29.4020 MHz CW
```

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

AMSAT Store and Dayton Update

AMSAT News Service Bulletin 111.01
From AMSAT HQ SILVER SPRING, MD.
April 20, 2008
To All RADIO AMATEURS
BID: $ANS-111.01

The AMSAT Store is still down, but we now have a computer that will be the server for the AMSAT Store. We hope to have the store operational as soon as possible. This is currently a volunteer effort, travel and work obligations have slowed down the process of getting the software installed.

AMSAT at the Dayton Hamvention continues to grow. We will have a great Forum on Saturday morning and many new items available at the booth, including a limited number of LVB Tracker boxes. The outdoor demonstration area will be busy all three days plus offer an "Introduction to Amateur Satellite Operation" talk Friday and Saturday afternoons.
Be sure and contact Martha to make your reservations for the joint AMSAT/TAPR Banquet Friday night May 16.
Be sure an join us for the Pizza and Suds gathering on Thursday night.
Additional information can be found on the AMSAT web site,
http://www.amsat.org

[ANS thanks Gould, WA4SXM, for the above information]

ESA Call for Cubesat Proposals

AMSAT News Service Bulletin 111.03
From AMSAT HQ SILVER SPRING, MD.
April 20, 2008
To All RADIO AMATEURS
BID: $ANS-111.03

The European Space Agency Education Office has received good response to its call for CubeSat proposals issued last month to universities in ESA member nations and other cooperating states. This to participate in the development of an educational payload for the maiden flight of the new Vega launch rocket currently scheduled for December.

The launch opportunity on the Vega maiden flight is being offered free of charge for up to 6 CubeSats, with an additional 2 backup CubeSats on back up standby. The ESA Education Office says that it recognizes the growing importance of CubeSat projects as a key tool in providing university students with a valuable hands-on practical education across all space engineering disciplines from end-to-end through the complete space project lifecycle.

SB SAT @ AMSAT $ANS-111.05
European Student Earth Orbiter Update

AMSAT News Service Bulletin 111.05
From AMSAT HQ SILVER SPRING, MD.
April 20, 2008
To All RADIO AMATEURS
BID: $ANS-111.05

It has been quite a time since the AMSAT-UK European Student Earth Orbiter (ESEO) team have been able to provide an update on the progress of this satellite payload and just recently ESA have made a major change to the structure of the project organization.

The plan has been to develop a package to provide downlink telemetry at 400 bps and provide backup tele-command and ranging facilities for the mission management teams. It would, additionally, provide a 435 to 2400 MHz (Mode U/S) linear transponder using both analogue and DSP based systems.

ESEO is a 110kg student satellite project intended for launch in to low inclination GTO elliptical orbit.

Until the beginning of 2008 the whole ESEO project had been organized directly by ESA Education Office under the SSETI (Student Space Exploration & Technology Initiative) banner but they have now decided to adopt new arrangements.

To quote from the ESA website

> " To date, both projects (ESEO and ESMO) have proceeded in the early phases with a project team consisting entirely of students with project management and ad hoc technical support provided by ESA.
>
> It is now intended to implement a new project team structure for these two projects in order to enhance the educational benefits given to the students and to ensure that the project progresses through major reviews to a successful completion on schedule. The new project structure consists of:
>
> * a System Prime responsible for the system engineering and technical management of the project, the provision of specialist technical advice to the students where needed, and supervising the student AIV(Assembly Integration & Verification) of the satellite at ESTEC.

* a Network of Universities responsible for the delivery of payload items, satellite subsystem items and ground segment systems by their student teams and ensuring the adequate supervision/long-term continuity of the student teams locally."

What does this mean for AMSAT-UK's involvement in the project?

The launch date is now not expected to be earlier than 2011.

The process for the appointment of the System Prime Contractor is presently underway and is expected to be completed by later this year.

After the System Prime has been appointed, we will work with them and with ESA Education to ensure that the AMSAT sub-system is available when required by the programme.

Further information should be available in time for the AMSAT-UK Colloquium which is being held at the University of Surrey at Guildford from Friday 25th to Sunday 28th July,

[ANS thanks AMSAT-UK for the above information]

/EX

SB SAT @ AMSAT $ANS-111.06
AMSAT-Australia and Ozsatgroup Combine Forces

AMSAT News Service Bulletin 111.06
From AMSAT HQ SILVER SPRING, MD.
April 20, 2008
To All RADIO AMATEURS
BID: $ANS-111.06

You may not be aware that AMSAT-Australia and the Ozsatgroup have amalgamated, and that the new combined group has retained the name AMSAT-Australia.

AMSAT-Australia and the Ozsatgroup have been working together for more than two years, and have been discussing such an amalgamation for some time.

The decision to go ahead with the amalgamation was made after Graham Ratcliff, VK5AGR formally tended his resignation as AMSAT-Australia National Coordinator and as AMSAT Coordinator for the Wireless Institute of Australia (WIA) in his annual report to the WIA 2008

Federal Convention on Monday, 7th April 2008.

The role of AMSAT-Australia National Coordinator has been taken on by myself Paul Paradigm, VK2TXT, formally the Coordinator of the Ozsatgroup, and joined by Judy Williams, VK2TJU in the role of AMSAT-Australia Secretary.

I would like to take this opportunity on behalf of both the Amateur Radio operators on the AMSAT-Australia mailing list and the members of the former Ozsatgroup to thank Graham for his outstanding contribution to the Amateur Radio community here in Australia and around the world.

Graham has been in the role of AMSAT-Australia National Coordinator since 1983, and has been the driving force behind AMSAT-Australia since its inception.

Visit our website at http://www.amsat-vk.org for more information.

73's

Paul - VK2TXT
AMSAT-Australia National Coordinator.

[ANS thanks Paul, VK2TXT for the above information]

SB SAT @ AMSAT $ANS-111.07
Satellite Shorts From All Over

AMSAT News Service Bulletin 111.07
From AMSAT HQ SILVER SPRING, MD.
April 20, 2008
To All RADIO AMATEURS
BID: $ANS-111.07

+ Robert, G8ATE has updated his web site at http://www.turlington.supanet.com to show an SSTV contact with GM0ICF via VO52 and Field Hell tests via AO7 mode B, AO16,S O50, AO51 & VO52.

+ When operating on AO-7 keep an ear open for the informal "DX Watering Hole" near 145.959 MHz +/-. This is the proposed frequency for those "footprint stretching", edge-to-edge QSO's on AO-7.

+ The Federal Communications Commission says it is seeking applications from engineering school graduates with superior academic credentials and an interest in communications engineering for its 2008 Engineer-in-Training Program. Additional information is available on the FCC's EIT Program page at http://www.fcc.gov/EITprogram, or by contacting the FCC's Human

Resources Office at area code 202-418-0130. You can also e-mail for more information to recruit@fcc.gov. (via Amateur Radio Newsline)

+ Reminder! Visit the AMSAT Dayton Web page to learn of the latest events planned for this year's Hamvention:
http://www.amsat.org/amsat-new/hamvention/2008/Dayton2008.php

[ANS thanks everyone for the above information]

SB SAT @ AMSAT $ANS-111.08
ARISS Status - 14 April 2008

AMSAT News Service Bulletin 111.08
From AMSAT HQ SILVER SPRING, MD.
April 20, 2008
To All RADIO AMATEURS
BID: $ANS-111.08

1. Upcoming School Contacts

Arnold Palmer Hospital for Children in Orlando, Florida has been scheduled for an Amateur Radio on the International Space Station (ARISS) contact on Monday, April 21 at 17:48 UTC via the telebridge station W6SRJ in Santa Rosa, California. The audio for this event will be fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) Conference Room servers and the IRLP Discovery Reflector 9010.

2. Croatian Contact Successful

On Monday, April 7, students from Osnovna skola Pazin in Croatia participated in a successful Amateur Radio on the International Space Station (ARISS) contact. Garrett Reisman, KE5HAE, answered 15 questions posed to him by 6 students as an audience of 100 people gathered around the radio. Three national television stations, three radio stations and five newspapers covered the event. The audio was fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers and received 16 connections, including 3 link nodes and 1 repeater node, from 11 countries.

3. First Korean Contact Successful

Students attending the Han Gwang Boys & Girls High School in Pyeong Taek City,
Republic of Korea experienced an Amateur Radio on the International Space Station (ARISS) contact on Sunday, April 13. South Korean space visitor Yi So-yeon, HL0ARISS, answered 12 students' questions. Over 500 people attended the
event. Media coverage included 5 television stations and 10 newspapers.

4. ARISS Crew Debrief Held

A debrief session was held between the Amateur Radio on the International Space
Station (ARISS) team and Expedition 16 crew member Leopold Eyharts, KE5FNO/FX0STD, on Monday, April 7. Eyharts provided feedback on ARISS school contacts and operation of the ARISS radio equipment.

5. ARISS Presentation at Dayton Hamvention

The Dayton Hamvention will be held at the Hara Arena Complex in Dayton, Ohio on
May 16 - 18. The American Radio Relay League (ARRL) and the Radio Amateur Satellite Corporation (AMSAT) will both support exhibit booths at the event. Amateur Radio on the International Space Station (ARISS) Chairman Frank Bauer
plans to give a presentation on "A Ham Radio Operator's View of ARISS" at the
AMSAT forum which will cover new ARISS initiatives and a status report on SuitSat-2. The Dayton Hamvention is an internationally attended amateur radio
convention that draws crowds of 25,000 annually.
For more information on Dayton Hamvention 2008, go to:
http://www.hamvention.org/hv2008/forums/forumlist.htm

[ANS thanks Carol, KB3LKI, for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's
Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are
available from the AMSAT Office.

73,
This week's ANS Editor,
Lee McLamb, KU4OS

What are the general ARRL Field Day Plans for satcoms?

This will be our clubs first attempt for points on satcoms. Are there any really good links I should look?

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deorbited/returned satellites

BID: $ANS-115.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink:   145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

=====
MO-46 TIUNGSAT-1
Catalog number: 26548
Launched: September 26, 2000

Status: Non-Operational

Uplinks:   145.850 MHz
           145.925 MHz 9600-baud FSK
Downlink:  437.325 MHz

Broadcast callsign: MYSAT3-11
BBS:                MYSAT3-12

TiungSat-1 is Malaysia's first micro-satellite and in addition to
commercial
land and weather imaging payloads offers FM and FSK Amateur Radio
communica-
tion.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a
collaborative effort between the Malaysian government and Surrey
Satellite
Technology Ltd.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deborbited/returned satellites

AMSAT NEWS SERVICE BULLETIN 121.S1 FROM AMSAT HQ
SILVER SPRING, MD, May 01, 2008
TO ALL RADIO AMATEURS
BID: $ANS-121.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon that is
active. Each transponder has a different beacon.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launch date: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

Delfi-C3
Catalog number:
Launch Date: April 28, 2008

Status: IN ORBIT

Telemetry: 145.870 MHz

Downlink: 145.880 to 145.920 MHz
Uplink: 435.530 to 435.570 MHz

Proposed Frequencies:
* Primary telemetry downlink: 145.870 MHz 1200 Baud BPSK AX.25 400mW
* Backup telemetry downlink: 145.930 MHz 1200 Baud BPSK AX.25 400mW
* Linear transponder passband downlink: 145.880 - 145.920 MHz
(inverting)
  400mW PEP
* Linear transponder passband uplink: 435.570 - 435.530 MHz
* Transponder mode beacon: 145.870 MHz CW (10dB below transponder PEP)

INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational

Current Mode: FM Repeater - U/v
Voice - Occasianally
BBS - ON
APRS - ON
SSTV - OFF

Expedition 17 crew:

Commander:	Sergey Volkov	RU3DIS
Flight Engineer:	Oleg Kononenko	RN3DX
Flight Engineer:	Garrett Reisman	KE5HAE

Available Modes and Frequencies:
Digital/APRS:
Worldwide packet uplink: 145.825 MHz FM
Worldwide packet downlink: 145.825 Mhz FM

Voice:
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

Crossband Repeater:
Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM

Mode and Antenna Polarization:
V: Linear
U: Linear

Callsigns:
German: DP0ISS
Russian: RS0ISS

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:

AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

Most of my information comes from, "The History of Modern Science". In any case, "empty" space within the universe does have some sort of quantum structure and EM waves indeed do require that quantum medium. That's why light cannot escape the universe.

Okay. Sorry. "Carrier" is the wrong word. The radio reciever captures
and demodulated 2 GHz waves as if those waves are amplitude-modulated.
So this "carrier" is really the waves emitted from cosmic sources.

Wouldn't I hear sounds resulting from demodulating the 2 GHz waves in an
AM-manner?

Why do you say that "UHFs tend to the best for extremely long distance reception"? Have a look at the basic equation governing line-of-sight reception.

Why do you not answer your own question? It sounds to me like as reasonable a premise for a science fiction book as many that have been successful. You could perhaps spin it into quite an interesting story. You've already started with a premise that's so far from -- so very, very far from -- the current realities or even the dreams of people designing receivers that you may as well suppose you're going to receive whatever your wildest imagination might come up with. Since there is a nearly countless number of stars in the known universe, and since a large percentage of them could be planetary systems, each with the possibility of emitting interesting amplitude modulated carriers, your choices are pretty near limitless. Wow! Let your imagination run wild. It obviously did when you posed the question; you may as well let it run as wild with the answer. Back to you, Nonex!

Oh, and by the way, "spamming" comes, in one form, from posting too many places; I've trimmed off a whole bunch of groups for this reply. By my way of thinking, you're being pretty generous with yourself saying you don't spam.

<Sigh>

What is the energy of ONE 2GHz photon?

Free clue: Planck says "E = h.v" ;

h is Planck's constant (IIRC ~ 6.6E-34 Js)
v (Greek letter nu) is frequency, in Hz, i.e. 2E9 here

How does the resultant photon energy, in Joules, compare to your imagined
intensity of (2^-10000) Wm^-2 ? How many 2GHz photons are you going to
get per square metre per second at that ridiculously low intensity?

Do you really think there'll be enough photons to carry any useful
(e.g. audio frequency) signal?

Hmm; (2^-10000) Wm^-2 ~= 5E-3011 Wm^-2 = 5E-3011 Js^-1m^-2

E = h.v ~= 6.6E-34 * 2E9 ~= 1.32E-24 J per 2GHz photon

I guess you could expect an average of 1 photon per m^2 moseying on by about
every 2.64E2986 seconds.

So far, the universe is estimated at 13.7E9 years
~= 86400 * 365.25 * 13.7E9 seconds
~= 4.32E17 seconds.

For all intents and purposes, at that intensity, at 2GHz, there ARE NO
PHOTONS to detect - unless you wanna wait about a fucktillion universe-
lifetimes for each photon - time that you don't have.

Let me put that simply:

THERE IS NO 2GHz SIGNAL AT (2^-10000) Wm^-2.

Radium, why do you have this tendency to use such enormous exponents in
your questions?

Martin

AMSAT NEWS SERVICE
ANS-280

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

******************* AMSAT 2007 Space Symposium *************************

The Wireless Association of South Hills Amateur Radio Club announces the 2007 AMSAT Space Symposium will be held at the Pittsburgh Airport Marriott Hotel on Friday, October 26 through Sunday, October 28, 2007. The AMSAT web team has posted informational pages on the AMSAT web site. You can find the announcement with many links at:
http://www.amsat.org/amsat-new/symposium/2007/index.php

In this edition:

- 2007 AMSAT Space Symposium Features and Events Announced
- Sputnik-1 50th Anniversary Special Event Via AO-51
- AO-51 Includes Special L/U BBS and Telemetry Experiment
- Three Packet Satellites Available on 145.825 MHz
- F8ZS Silent Key
- ARISS Status Report for the week of October 1, 2007

SB SAT @ AMSAT $ANS-280.01
2007 AMSAT Space Symposium Features and Events Announced

AMSAT News Service Bulletin 280.01
>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.01

Make plans now to attend the AMSAT-NA 2007 Space Symposium! Amateur Radio Satellite Operators will find the AMSAT Space Symposium to be an exciting and rewarding event-filled weekend. Here are some of the features and events to look forward to:

- AMSAT-NA Annual General Meeting
- AMSAT-NA Board of Directors Meeting
- AMSAT Directors and Officers will be available to answer your questions
- AMSAT Annual Banquet with Keynote Speaker
- Technical forums focusing on the latest planning and technology of Amateur Radio in Space
- All Papers and Presentations will be published in the Symposium Proceedings for all registered attendees
- Technical demonstrations of prototype flight hardware and software for AMSAT Eagle - the next generation in space
- Discussions and demonstrations of SuitSat-2, ARISS, solid state RF power amp, antennas, AO-51
- Update on AMSAT's new Maryland Lab
- AMSAT Area Coordinators' Breakfast and Meeting on Sunday Morning
- IARU Satellite Forum
- President's Club Reception
- Satellite Beginner's Session: Introduction to Satellites
- An operating satellite station capable of working AO-7, FO-29,

AO-27, SO-50, AO-51 and VO-52
 + N2SPI satellite antenna demonstrations and antenna construction
 with students
 + Meet and greet old friends and make new friends
 + Enjoy eyeball QSOs with satellite designers, builders, and operators
 from around the world
 + Sunday afternoon tour to the WPXI-DT Digital Studio

The AMSAT Software Defined Transponder Team is working toward having an operational VHF - UHF transponder available for the entire weekend. Eagle Project Team members will be available to answer your questions and provide demonstrations.

New to the Symposium this year is a selection of apparel that may be ordered. We have Symposium themed golf shirts, tee shirts, key rings ball caps. A percentage of these sales will go to Eagle.

For those people who would rather not register for the Meeting through the AMSAT store, you can register via phone by calling 301-589-6062.

[ANS thanks 2007 AMSAT Space Symposium Co-chairs Kevin N3HKQ,
 and Pat KC4WTT for the above information]

SB SAT @ AMSAT $ANS-280.02
Sputnik-1 50th Anniversary Special Event Via AO-51

AMSAT News Service Bulletin 280.02
>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.02

This week AMSAT hosted a Special Event on Wednesday night when AO-51 was used to retransmit the original Sputnik-1 telemetry in commemoration of Sputnik's 50th birthday.

AMSAT-NA Vice President of Operations, Drew KO4MA, summarized the event, "I just wanted to thank everyone for what looks like a well received special event. Special thanks to our participating uplink stations:

 + VE3NPC, Clare
 + N8BBQ, Ed
 + KD8CAO, Doug
 + WA6FWF, Kevin
 + K7WIN, Jeff
 + G1OCN, Dave
 + IW4DTU, Fer
 + Our chief AO-51 Command Op, WA4SXM, Gould,
 + and Drew's wife Merete for compiling and equalizing the audio."

Send a report to Kevin, WA6FWF at his callbook address with a 9x12 SASE and you will receive a nice QSL certificate.

Comments were received from many stations after the Sputnik passes:

"Great idea and very nice delivery! Enjoyed it very much on the the first active pass of AO-51 tonight." - VE4NSA

"Wonderfully loud and clear in DM-13 Southern California.
MANY THANKS." - K6LCS

"Clear copy of AO-51 message and Sputnik transmission at 0001 UTC from my balcony with a three element hand held UHF antenna." - VE3VIG

"It was great! My 8 year-old and 5 year-old boys listened with awe in their eyes as the bird came into view. I've been trying to spark their interest for years, and this may have done the trick!" - N8AU

"Tonight was truly fantastic and historic. My thanks to all for the hard work they undoubtedly put into this night." - KB2HSH

"I would like to add my thanks for a superb event. I copied most of the last two passes over NA on my IC R-20 and recorded the audio. This will be used along with Visual Sightings of the ISS and construction of 1/4 scale models of Sputnik (6" Styrofoam Ball and Wood Dowels) for a Sputnik 50th Birthday Party with 39 Elementary School Kids." - W5IU

"Midway into our Ottawa Amateur Radio Club executive meeting, we all took a break out to the street to have a listen to the rebroadcast of Sputnik-1 with an arrow and HT. Present were VE3TLY, VA3PAX, VE3FFK, VE3ZTU, VE3IGJ and VA3DB." - VA3DB

[ANS thanks Drew, KO4MA and everyone else for the above information]

SB SAT @ AMSAT $ANS-280.04
Three Packet Satellites Available on 145.825 MHz

AMSAT News Service Bulletin 280.04
>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.04

Bob, WB4APR reminds satellite packet operators of the opportunity of up to 25 passes per day for 2-way keyboard communications with simple packet equipment on 145.825 MHz uplink and downlink.

The 145.825 MHz frequency includes ARISS aboard the ISS, ANDE and PCSAT-1 operating at 1200 baud. Recently GO-32 became available on 435.225 MHz for 9600 baud communications

APRS Igate Packet gateway stations copying these three packet digipeater satellites on 145.825 feed to the two web pages:

http://www.ariss.net
http://pcsat.aprs.org

For additional information regarding the GO-32 435.225 MHz 9600 baud operation see: http://www.ew.usna.edu/~bruninga/GO32-ops.html

[ANS thanks Bob, WB4APR for the above information]

F8ZS Silent Key

AMSAT News Service Bulletin 280.05

>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.05

It is with sadness that I must inform our AMSAT colleagues, of the passing away of Jean Edmond Gruau F8ZS, President of Radio Amateur Club de l'Espace and Honorary President of AMSAT-France.

Jean was the father of ARSENE radioamateur mini satellite, launched in May, 1993.

He retired a few years ago from his position as Inspecteur General of the french space agency (CNES) that he contributed to create as well as the European Space Center in Kourou, french Guyana.

Jean F8ZS was a very kind man with always a lot of good stories to tell to his visiting friends about his large experience in radio transmissions and preventive failure security in space industry.

73 de Bernard, F6BVP
AMSAT France founding President

[ANS thanks Bernard, F6BVP for the above information]

SB SAT @ AMSAT $ANS-280.06
ARISS Status Report for the week of October 1, 2007

AMSAT News Service Bulletin 280.06
>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.06

1. Heidelberg University Contact Successful

On Monday, September 25, students from Heidelberg University for Applied Sciences in Germany experienced an ARISS contact via the telebridge station WH6PN in Hawaii. Clay Anderson, KD5PLA, answered one question from each of twenty students, as 200 youth gathered in the radio shack.

2. ARISS Contact Achieved with Texas School

An ARISS contact between students at the Art and Pat Goforth Elementary School in League City, Texas and Clay Anderson, KD5PLA, aboard the ISS took place on Wednesday, September 26 via the telebridge station WH6PN in Hawaii. Approximately 50 students, teachers and parents gathered in the school�s amphitheater as Anderson fielded 25 questions put to him by 13 students, the first question asked by his daughter.

3. Smithsonian � ARISS Contact

On Saturday, September 29, youth visiting the Smithsonian National Air and Space Museum in Washington, D.C. participated in an ARISS contact as part of its Family Day, �Commemorating 50 Years in Space.� The telebridge station WH6PN in Hawaii assisted in the contact. Gathered in the Space Race gallery, five children had 25 questions answered by Clay Anderson, KD5PLA. The Radio Amateur Satellite Corporation (AMSAT) and ARISS booths were set up near the main entrance and generated much interest. Many local amateur radio operators attended to help out. Approximately 15,000 - 20,000 visitors were expected to attend the event throughout the day.

4. School Contacts

An ARISS contact was held for the Town of Anamizu ARISS School Contact Executive Committee in Anamizu-town, Housu-gun Ishikawa, Japan on Saturday, October 6. Six hundred students from seven elementary and junior high schools will participate in this event. Conversational English, computers, amateur radio and the International Space Station are the subject matters studied in preparation for this event. Because this wass the first ARISS contact within the prefecture of Ishikawa, all preparations leading up to and including the contact were covered in the media.

Prairielands Council, Boy Scouts of America in Champaign, Illinois held an ARISS contact on Saturday, October 6 via the telebridge station VK4KHZ in Australia. Prairielands Council is made up of three districts supporting Boy Scouts and Cub Scouts in Central Eastern Illinois and Central Western Indiana. The Prairielands Council has created a new event, the Space Jamboree. Scouts attending will work on the Space Exploration Merit Badge requirements which include designing Mars missions and constructing Moon base models. They will design and launch water rockets and become familiar with robotic technology. Segway of Chicago will assist in robotics education and the FIRST program regional director will bring robots to this first annual Space Jamboree. The local rocket club will be providing rocket launches throughout the event, two during the outdoor viewing of the movie "October Sky." The youth are also expected to complete many of the Radio Merit Badge requirements.

An ARISS contact has been scheduled for Isummasaqvik School in Quaqtaq, Quebec, Canada on Wednesday, October 10 at 18:31 UTC. The telebridge station ON4ISS in Belgium will assist in the contact. Approximately 100 students, from Kindergarten through high school levels, attend Isummasaqvik School. The school plans to hold a contest to create a mission

patch to be worn on T-shirts by everyone participating in the contact.
All classes will participate in space related projects which will be
displayed in the school gym on the day of the contact.

5. ARISS International Meeting Held

An ARISS teleconference was held on Tuesday, September 25. Topics of
discussion included a new telebridge station, status of the Columbus
Module antennas and SuitSat-2. The minutes have been posted to the
ARISS web site. See: http://www.rac.ca/ariss/arisstel2007-09-25.htm

6. Astronaut Training Status

Astronaut Michael Barratt, KD5MIJ, participated in a simulated ARISS
school contact during a training session held the last week of
September.
Barratt is the backup for Michael Fincke on Expedition 18.

[ANS thanks Carol, KB3LKI for the above information]

Okay. So 10-to-the-power-NEGATIVE-10,000 watt-per-meter-squared is so low it�s impossible.

What is the minimum watts-per-meter-squared I need to receive if I want audio?

> Radium, why do you have this tendency to use such enormous exponents in
> your questions?

I tend to be interested and obsessed with the occult and extreme.

Lower frequencies are absorbed by charged particles. Ionized zones [such as Earth ionosphere and the heliosphere around the solar system] tend to block low-frequency radio waves. That is why UHF is the best.

UHFs are the �sweet-spot� of radio waves. They are high-frequency-enough not to be attenuated by objects that block longer-wave radio signals and low-frequency-enough not to be attenuated by objects that block infrared rays.

Okay, I will let my imagination run wild.

I would hear scary stuff on the space station�s radio.

I used to often play my Nintendo when it was connected to channel 3. However, I was change the TV channel to 4. I could see the video of the game but it was fuzzy and covered in grains. The music of the game was absent, and instead was filled with frightening-yet-enjoyable tones [sounding like a buzzer, lawn mower, or electric shaver] along with a faint audio of what was being discussed on the channel 4 news.

I would hear something similar on my 2 GHz AM DX receiver in space.

Also, whenever there is drill or an actually emergency, the Emergency Alert System [EAS] plays their music. First they play the boring low-pitch square-wave tones. Then they play the high-pitched, terrifying, enjoyable, psychedelic sine-wave tones.

I would also hear something similar to the second higher-pitched set of EAS tones on my 2 GHz AM DX receiver in space but not the 1st lower pitched tones. The lower-pitched 1st tones don�t at all resemble what I would hear on the AM receiver.

In addition, I would hear sounds that are similar to the following terrifying-yet-enjoyable tones present on this keyboard�s 100 sound tone back:

http://concertmate.evenement0.net/img/concertmate_realistic_concertmate-450_img1.jpg

#75 �cosmic sound� when the volume is at maximum

#76 �telephone� when the volume is at minimum and I press keys from the 7th black key [from the left] or lower. If any key that is right of the 7th black key is pressed, the sound is totally different and will not even remotely resemble anything I would hear on the AM receiver.

#81 �marimba� when the volume is at minimum and I press the lowest or highest key separately � especially if I first press the lowest key, then let go, and then immediately press the highest key afterwards.

#85 �afro percussion� when the volume is at maximum and I smoothly slide my hand from lowest to highest note and then highest to lowest note or if I play notes two or more notes with one no higher than the 7th black key from the left and the other note no lower than the 10th key from the right. Actually any combinations of this tone will resemble what I would hear on my 2 GHz receiver.

#96 �bass/piano� when the volume is at maximum and I press the lowest key.

All the sounds I hear on the receiver are those that result from the radio waves emitted by the magnetic fields of objects in the distant cosmos -- such as magnetars. At times, when the magnetic objects cause magnetic vibrations at an RF-rate, they cause radio waves to be generated. If the rates include 2-billions-vibrations-per-second, then my receiver will demodulate the 2 GHz parts and I can hear the signals -- provided that the demodulations result in frequencies anywhere from 20 to 20,000 Hz [the human hearing range].

I only posted to relevant NGs.

I would also hear something similar to the second higher-pitched set of EAS tones on my 2 GHz AM DX receiver in space but not the 1st lower pitched tones. The lower-pitched 1st tones don�t at all resemble what I would hear on the AM receiver.

In addition, I would hear sounds that are similar to the following terrifying-yet-enjoyable tones present on this keyboard�s 100 sound tone back:

http://concertmate.evenement0.net/img/
concertmate_realistic_concertmate-450_img1.jpg

#75 �cosmic sound� when the volume is at maximum

#76 �telephone� when the volume is at minimum and I press keys from the 7th black key [from the left] or lower. If any key that is right of the 7th black key is pressed, the sound is totally different and will not even remotely resemble anything I would hear on the AM receiver.

#81 �marimba� when the volume is at minimum and I press the lowest or highest key separately � especially if I first press the lowest key, then let go, and then immediately press the highest key afterwards.

#85 �afro percussion� when the volume is at maximum and I smoothly slide my hand from lowest to highest note and then highest to lowest note or if I play notes two or more notes with one no higher than the 7th black key from the left and the other note no lower than the 10th key from the right. Actually any combinations of this tone will resemble what I would hear on my 2 GHz receiver.

#96 �bass/piano� when the volume is at maximum and I press the lowest key.

All the sounds I hear on the receiver are those that result from the radio waves emitted by the magnetic fields of objects in the distant cosmos -- such as magnetars. At times, when the magnetic objects cause magnetic vibrations at an RF-rate, they cause radio waves to be generated. If the rates include 2-billions-vibrations-per-second, then my receiver will demodulate the 2 GHz parts and I can hear the signals -- provided that the demodulations result in frequencies anywhere from 20 to 20,000 Hz [the human hearing range].

For some reason, I had it in my mind that you'd (Radium) suggested
an intensity of (2^-10000) Wm^-2, but having read your reply, I notice
that it was in fact 1E-10000 Wm^-2, which makes the situation EVEN WORSE.

Just for shits and giggles, since you're so into BIG NUMBERS:
Here, check out this Wikipedia article on "Graham's Number":

http://en.wikipedia.org/wiki/Graham%27s_number

The number cannot easily be written down in any form that is easily comprehensible to a non-mathematician, but suffice to say, it's fucking unimaginably huge. Mind you, so is 1E1000000 (10^1000000), and that's not even an ATOM in Graham's Number's back-yard.

Now, imagine (well, try, but you'll fail):

If Graham's number is G:

G!

G!!

G!!!

G(!^G) (G followed by G factorial operators '!')

G^G

As Googolplex=10^Googol , so: G(plex^G), i.e. G-plex-plex-plex...(G times)

I suppose you've got wood by now, Radium.

Martin

Space Weather News for Oct. 10, 2007
http://spaceweather.com

CELESTIAL TRIANGLE: Set your alarm. For the next five mornings, just before dawn banishes the night, you can see a compact celestial triangle rising in the eastern sky. The corners are dazzling Venus, Saturn and the bright star Regulus. This is worth waking up for--at least once. Visit http://spaceweather.com for sky maps and more.

AURORA WATCH: A solar wind stream is heading for Earth and it may spark a geomagnetic storm when it arrives on Oct. 11th or 12th. High-latitude sky watchers should be alert for auroras.

Okay. So 10-to-the-power-NEGATIVE-10,000 watt-per-meter-squared is so low it�s impossible.

What is the minimum watts-per-meter-squared I need to receive if I want audio?

> Radium, why do you have this tendency to use such enormous

AMSAT NEWS SERVICE BULLETIN 281.S1 FROM AMSAT HQ
SILVER SPRING, MD, October 08, 2007
TO ALL RADIO AMATEURS
BID: $ANS-281.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

```
Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink:   435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink:   435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon:  145.859330 MHZ CW
Dutch Beacon:   145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon.

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink:   145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)

* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the
President's Club. Members of the President's Club, as sustaining donors
to AMSAT Project Funds, will be eligible to receive additional benefits.
Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the
memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen,
G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

Hi:

I started a new thread because in
http://groups.google.com/group/rec.radio.amateur.space/browse_frm/thread/3126d2cacaf60a83/
OT content was added.

On Oct 9, 12:22 pm, "Fleetie" <flee...@fleetie.demon.co.uk> wrote in

Okay. So 10-to-the-power-NEGATIVE-10,000 watt-per-meter-squared is so low it�s impossible.

What is the minimum watts-per-meter-squared I need to receive if I want audio?

No offense but please respond with reasonable answers & keep out the jokes, off-topic nonsense, taunts, insults, and trivializations. I am really interested in this.

Thanks,

Radium

P.S. What is the minimum watts-per-meter-squared I need to receive if I want audio?

What is the minimum watts-per-meter-squared I need to receive if I want audio?

What is the minimum watts-per-meter-squared I need to receive if I want audio?

What is the minimum watts-per-meter-squared I need to receive if I want audio?

Life's like that.

>What is the minimum watts-per-meter-squared I need to receive if I want
>audio?

But posting the same questoin a zillion times is merely trolling.

plonk

Assuming you mean 1 photon per second per square meter, that's 1.3 yW/m^2 (that's 1.3 yoctowatts per square meter, or 1.3e-24 watts per square meter).

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deborbited/returned satellites

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u
```

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

* ARISS Status - 08 October 2007

SB SAT @ AMSAT $ANS-287.01
Certificates for AO-51 Sputnik 50th Anniversary Special Event

AMSAT News Service Bulletin 287.01
From AMSAT HQ SILVER SPRING, MD.
October 14, 2007
To All RADIO AMATEURS
BID: $ANS-287.01

Kevin Schuchmann, WA6FWF, reports that he has started to receive the requests for certificates and is working on getting them out as fast as possible. The response has been great so far. People requesting a certificate should keep the following in mind:

1) this is not a small QSL card, it is a certificate that is 8.5" x 11", if you send a small envelope he will be forced to fold it.

2) make sure you have enough postage

3) if you want to make sure it does not get bent, include a card board backer or use a heavier envelope

4) do not include money or stamps, I appreciate the gesture but it is not necessary, donations can be sent to Martha directly

5) if you put "your" address up in the upper left coner as the return instead of Kevin's then in the event there is not enough postage it will be returned to the sender instead of Kevin for additional postage!!

Kevin observed that, "based on the fact that my mailbox was full and the postman had to leave more at the front door I might need the couple weeks we said it might take!"

[ANS thanks Kevin, WA6FWF, for the above information]

SB SAT @ AMSAT $ANS-287.03
GO-32 mobile APRS access success

AMSAT News Service Bulletin 287.03
From AMSAT HQ SILVER SPRING, MD.
October 14, 2007
To All RADIO AMATEURS
BID: $ANS-287.03

Bob Bruninga, WB4APR reports receiving over 150 packets from GO32 in the mobile and gives the following report.

If you want to impress someone with handheld Satellite Communcications, just stand outside during the prime morning or evening pass of GO-32 with your D7 HT set for APRS 9600 baud receive on 435.230 (5 KHz high at the start of the pass) and watch the messages fly by... Switch to .225 and finally to .220 by the end for maximum packets.

Tonight I finally remembered to set my D700 in my van to the GO32 downlink. Was out doing honeydoos around 7:50 PM and heard a few squelch breaks. This would be the first evening pass. So that told me to be out 100 minutes later for the prime pass of the evening.

I was not disappointed! Received over 150 packes during the central 6 minutes of the pass. I was just making hash marks on the back of an envelope while watching the packets fly by on the front panel of the radio. I did tune 3 times for Doppler since I was just sitting there with nothing else to do.

This confirms that an unattended D700 or D7 hooked to a simple OMNI antnena (and short coax) can make an excellent APRS satellite gateway. With say a dozen of these across the USA, then the APRS-Internet system should get a solid downlink!

After the fact, I came in and looked at the pass on Instantrack. Here is the nitty-gritty showing the elevation angle versus number of packets received per minute.

TIME	EL	PACKETS
0933	30	18
0934	40	23
0935	46	36
0936	45	35
0937	36	24
0938	26	13

For an unattended ground station without Doppler tuning, my guess would be that this station would have received the center full 3 minutes of this 45 degree pass.

So, what is your handy D7 doing sitting on your shelf turned off? Hook it to a 19" vertical whip over a ground plane outside your window and contribute to the National GO-32 APRS downlink system!

I'll get someone to write a simple turn-key APRS IGate background application, so you don't have to hasssle with all the other APRS stuff if you dont want to. This way, you can just turn on the D7, hook it to a serial port, run this application in the background, and you too will be a contributor to the

solid APRS downlink from GO-32!

Oh, On the D700, I had pressed the PACKET MONITOR button so that I was seeing all GO-32 downlink packets on the front panel, not just the APRS ones. The D7 does not have the PMON button, so you will only see the APRS packets. But I

did receive the 3 APRS downlink bulletins perfectly many times, and every 30 seconds or so, I did receive the GO-32 TIME STATUS report on the front panel

of the radio.

So, even if you are not going to Igate, just hook that D7 to an outside 19" vertical whip (this serves as a 3/4 wave gain vertical on the 435 downlink) through a short coax (Antnena height does not matter, coax loss does!). You won't hear anything below 30 degrees anyway... And just leave the HT on all

the time tuned to 435.230. Every morning and every evening, you will receive GO-32 and any other APRS operators playing that evening.

When you hear good signals on 435.230, then 2 minutes later, switch to 435.225 and so on. When the pass is over, set your radio back to 435.230 for the next HIGH pass 12 hours or so later.

You can leaave this on all the time, since it will not wake you up. GO-32 PEAK passes are within an hour or so of 9 AM and PM local time (maybe an hour later after the change back to standard time)..

Thousands of AMSAT folks have these D7's, and I bet that 99% of them are not

in use most of the time. All we need are a dozen or so serving this space-diversity ground station function...

[ANS thanks Bob, WB4APR, for the above information]

Satellite Shorts From All Over

AMSAT News Service Bulletin 287.04
From AMSAT HQ SILVER SPRING, MD.
October 14, 2007
To All RADIO AMATEURS
BID: $ANS-287.04

+ Henk, PA3GUO, one of the control operators for the ANDE satellite reminds amateurs that the packet-to-voice mode still remains available. A command from a ground station is required to enable this mode so Henk invites amateurs interested in experimenting to contact him by e-mail at pa3guo@amsat.org.

+ Drew, KO4MA, AMSAT VP of Operations reminds amateurs interested in experimenting with different modes on AO-51 to submit their request via e-mail to ao51-modes@amsat.org. One experimental mode under consideration includes a day dedicated for D-Star testing via AO-51.

+ Special Events Station GB5OSO, celebrating the 50th anniversary of the launch of Sputnik-1 has worked several stations through the SO50, VO52, AO51, AO27, and AO7 satellites. Robert, G8ATE reported a transatlantic contact between GB5OSO and Jim, VE1ZM on SO-50.

+ Earlier this year the Japanese Space Agency (JAXA) sponsored an activity to fly your name to the moon aboard its "KAGUYA" (SELENE) lunar probe. Selene has attained lunar orbit and JAXA reports that messages from 412,627 people around the world are now at the moon. For more information see: http://www.isas.ac.jp/e/snews/2007/1005.shtml

+ A video featuring the Amateur Radio Mars Orbiter P5-A has been put on the YouTube website. Details at http://www.uk.amsat.org/.

[ANS thanks everyone for the above information]

SB SAT @ AMSAT $ANS-287.05
ARISS Status - 08 October 2007

AMSAT News Service Bulletin 287.05
From AMSAT HQ SILVER SPRING, MD.
October 14, 2007
To All RADIO AMATEURS
BID: $ANS-287.05

1. Anamizu Contact Successful

On Saturday, October 6, students from seven elementary and junior high schools in Anamizu-town, Housu-gun Ishikawa, Japan gathered to ask Clay Anderson, KD5PLA, questions via an Amateur Radio on the International Space Station (ARISS) contact. Nearly six hundred students were expected to participate in this event and preparations leading up to and including the contact were to be covered by the media. More information will follow as it becomes available.

2. Boy Scouts Participate in ARISS Contact

Boy Scouts from the Prairielands Council who attended the Space Jamboree in Oakwood, Illinois, experienced a successful Amateur Radio on the International Space Station (ARISS) contact on Saturday, October 6 via the telebridge station VK4KHZ in Australia. All twenty questions which had been planned were asked and answered. Clay Anderson, KD5PLA, then answered an additional twelve for a total of 32 questions posed by thirteen of the scouts. Approximately 300 scouts, leaders, parents and one newspaper reporter attended the event. The audio was fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) conference room servers, receiving 30 connections, including 4 repeater nodes, from 9 countries. Among those countries listening were Poland, Denmark, Ukraine, and Thailand. The audio was also fed into the IRLP Discovery Reflector 9010.

The Prairielands Council contact was the 38th contact made by the Expedition 15 crew members, tying Expedition 12 for the most contacts made during one increment.

3. Upcoming School Contacts

Malaysian space visitor Sheikh Shukor launched into space with Expedition 16 crew members on Wednesday, October 10. While onboard the ISS, Shukor plans to participate in the Amateur Radio on the International Space Station (ARISS) program. He has been scheduled for 5 contacts with Malaysian students. Each group of students will gather at the National Planetarium in Kuala Lumpur and will speak with Shukor, 9W2MUS, directly via 9M2RPN. The following contacts have been planned:

Malaysian Group of Schools #1, Sunday, October 14, 2007 at 17:17 UTC

Malaysian Group of Schools #2, Monday, October 15, 2007 at 16:06 UTC
Malaysian Group of Schools #3, Tuesday, October 16, 2007 at16:28 UTC.
Malaysian Group of Schools #4, Thursday, October 18, 2007 at 15:39 UTC
Malaysian Group of Schools #5, Saturday, October 20, 2007 at 14:50 UTC

4. ARRL Article on 2008 Spaceflight Participant Richard Garriott, KE5QNX

The American Radio Relay League (ARRL) ran a story on Richard Garriott,
KE5QNX, (son of Owen Garriott, W5LFL) who will be a spaceflight
participant
next year, launching to the ISS in October 2008. Garriott plans to make
Amateur Radio on the International Space Station (ARISS) contacts while
onboard the ISS. See:
http://www.arrl.org/news/stories/2007/10/03/100/?nc=1

[ANS thanks Carol, KB3LKI, for the above information]

Thinking of picking up one of these to dabble with satellites (FM);
probably with a preamp for 70cm.

Can anyone recommend this unit for such use ? Can anyone point out any
reason why this would be a particularly BAD choice (other than it's not
multimode) ?

Thanks.

RS-15 will be in continuous sunlight from October 24 to November 25. If it continues the pattern of recent behaviour, it should be audible most passes during this period, between 29.3522 and 29.2533MHz. During the most recent eclipse season, the beacon frequency fell to 29.3517MHz, consistent with my earlier hypothesis that the frequency varies with the amount of solar energy reaching the satellite, and (with earlier observations) further suggesting that the influence of solar energy (via spacecraft temperature) takes place over a long period.

There is no sign of the transponder coming back to life.

AMSAT-NA Space Symposium Begins This Week

AMSAT News Service Bulletin 294.01
From AMSAT HQ SILVER SPRING, MD.
October 21, 2007
To All RADIO AMATEURS
BID: $ANS-294.01

The AMSAT-NA 2007 Space Symposium will begin this week! The AMSAT

Board of Director's meeting on Thursday, October 25 kicks off the event. Symposium activities begin on Friday, October, 26. Amateur Radio Satellite Operators will find the AMSAT Space Symposium to be an exciting and rewarding event-filled weekend. Here are some of the features and events to look forward to:

- AMSAT-NA Annual General Meeting
- AMSAT-NA Board of Directors Meeting
- AMSAT Directors and Officers will be available to answer your questions
- AMSAT Annual Banquet with Keynote Speaker
- Technical forums focusing on the latest planning and technology of Amateur Radio in Space
- All Papers and Presentations will be published in the Symposium Proceedings for all registered attendees
- Technical demonstrations of prototype flight hardware and software for AMSAT Eagle - the next generation in space
- Discussions and demonstrations of SuitSat-2, ARISS, solid state RF power amp, antennas, AO-51
- Update on AMSAT's new Maryland Lab
- AMSAT Area Coordinators' Breakfast and Meeting on Sunday Morning
- IARU Satellite Forum
- President's Club Reception
- Satellite Beginner's Session: Introduction to Satellites
- An operating satellite station capable of working AO-7, FO-29, AO-27, SO-50, AO-51 and VO-52
- N2SPI satellite antenna demonstrations and antenna construction with students
- Meet and greet old friends and make new friends
- Enjoy eyeball QSOs with satellite designers, builders, and operators from around the world
- Sunday afternoon tour to the WPXI-DT Digital Studio

The AMSAT Software Defined Transponder Team is working toward having an operational VHF - UHF transponder available for the entire weekend. Eagle Project Team members will be available to answer your questions and provide demonstrations.

AMSAT-DL Vice-President and Board member Hartmut P�sler, DL1YDD will give a presentation about the current status of the P3-E project and P5-A.

The full Symposium schedule has been posted on the web pages.

New to the Symposium this year is a selection of apparel that may be ordered. We have Symposium themed golf shirts, tee shirts, key rings ball caps. A percentage of these sales will go to Eagle.

For those people who would rather not register for the Meeting through the AMSAT store, you can register via phone by calling 301-589-6062.

[ANS thanks 2007 AMSAT Space Symposium Co-chairs Kevin N3HKQ, and Pat KC4WTT for the above information]

SB SAT @ AMSAT $ANS-294.02
Talk-in for the Symposium

AMSAT News Service Bulletin 294.02
From AMSAT HQ SILVER SPRING, MD.
October 21, 2007
To All RADIO AMATEURS
BID: $ANS-294.02

All:
Bottom line:

Talk-in for Symposium will be on 146.955/146.355 or 443.65/448.65 repeaters. (out/in) BOTH repeaters REQUIRE 131.8Hz CTCSS.

The 443.65 has very good coverage (3 remote receivers and 250 W tx) in areas where the 2m is "marginal". If not making UHF, user should try VHF.

73,
Jim
wb4gcs@amsat.org

SB SAT @ AMSAT $ANS-294.03
EchoLink to be activated during the AMSAT Symposium

AMSAT News Service Bulletin 294.03
From AMSAT HQ SILVER SPRING, MD.
October 21, 2007
To All RADIO AMATEURS
BID: $ANS-294.03

During the AMSAT open meeting portion of the Symposium, Echo-Link will be activated so people from around the globe can check in and join the meeting's discussion. What follows is an instruction set to enable you to use this feature. See the echolink website for further clarification.

>> Here's the instructions as best I can write based on just doing it.
>> Feel free to contact someone more familiar with echolink --
>> I'm a rare user.
>>
>> 1. Download and install the echolink client from echolink.org
>> 2. Launch it.

>> 3. First time users must provide some info and allow a few days for
>> authentication as a valid ham.
>> 4. Select explorer view
>> 5. select Node Types
>> 6. Select Conferences
>> 7. View AMSAT and double click.
>> 8. You will either connect or time out.
>> 9. If you time out, accept the "learn more" option to learn how to
>> connect either through a proxy or configure your router to allow the
>> ports needed by echolink.
>>
>> 73,
>> Jim
>> wb4gcs@amsat.org

SB SAT @ AMSAT $ANS-294.05

Donate to AMSAT via MissionFish

AMSAT News Service Bulletin 294.05
From AMSAT HQ SILVER SPRING, MD.
October 21, 2007
To All RADIO AMATEURS
BID: $ANS-294.05

For all of you that sell your goodies on eBay, wether it is ham radio related or not, you can donate a portion of your sale automatically to AMSAT through MissionFish.

To do this, when you list your item for sale, there is a tab that pops up on the �How you�re selling� screen for Online Auction or Fixed Price. Within those tabs, there is a blue and yellow ribbon with �Donate a percentage of sale.� After selecting AMSAT as your nonprofit organization, pick a percentage of the selling price to go to the AMSAT. That�s all you have to do.

When the auction is over, you give your donation to MissionFish or do nothing and MissionFish will deduct it from your credit card. In turn, MissionFish, will deposit the funds into AMSAT�s bank account.

This is an ideal way to donate a little bit or a big bit to AMSAT every time you auction something. You do not need to be a member of AMSAT to donate money through eBay�s online auctions. So, ask your non-ham friends if they would donate a little to AMSAT every time they auction something on eBay.

To see how MissionFish works, go to http://www.missionfish.org.

[ANS thanks Bruce, KK5DO for the above information]

AO-51 Software Crash - Reload/Reboot in Progress

AMSAT News Service Bulletin 294.06
From AMSAT HQ SILVER SPRING, MD.
October 21, 2007
To All RADIO AMATEURS
BID: $ANS-294.06
AO-51 Software Crash - Reload/Reboot in Progress

Drew, KO4MA AMSAT-NA Vice President of Operations reported that at 1848Z on OCtober 11 the software on AO-51 crashed and shut down both transmitters. The repeater and BBS have been down for several days while the command stations reload and restart the software.

On October 17, Drew reported on progress by the AO-51 Operations Team, "We are making good progress in reloading the software necessary to run AO-51, although it was a bit of a rocky start. The control stations hope to have AO-51 reloaded by the weekend of October 20-21. As we reload and restart operations on the satellite we will be able to better predict its return to service."

Interested stations can use their TlmEcho software to watch progress on the 435.150 MHz downlink. This downlink may only be on over the Southeastern US depending on how far along the reloading has proceeded.

[ANS thanks Drew, KO4MA for the above information]

Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)
- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors

to AMSAT Project Funds, will be eligible to receive additional benefits.
Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

The Weekend That Changed Amateur Radio

AMSAT News Service Bulletin 301.01
>From AMSAT HQ SILVER SPRING, MD.
October 28, 2007
To All RADIO AMATEURS
BID: $ANS-301.01

This past weekend, October 26-28 AMSAT-NA held a very successful Space Symposium in Pittsburgh, Pennsylvania.

Rick Hambly, W2GPS, AMSAT President along with Bob McGwier, N4HY, AMSAT Vice-President of Engineering were able to make public the results of their recent work which will change the face of amateur radio going forward. AMSAT has been in consultation with Intelsat regarding an application of an Intelsat platform carrying our amateur radio satelites

into geosynchronous orbit.

Engineering studies, funding studies, among other negotiations are continuing at this point. However Bob, N4HY made the following observation of the project AMSAT has termed Phase IV Lite, "There is enough in place at this time that AMSAT needs to begin planning engineering work and possible construction of a geosychronous payload so we are ready if Intelsat says they have a ride for us."

The Phase IV Lite Geosynchronous Payload is planned to consist of similar transponders already under development for the Phase 3 satellites. Accelerated development on the digital Advanced Communication Package is anticipated. In addition to the communication payload flown to space, AMSAT plans to develop an earth station attainable by the average ham so that users can immediately take advantage of the audio, digital messaging, and video services.

The Advanced Communication Package would be a self-contained earth station which could be sent with amateur radio communication teams or delivered to disaster areas for 24/7/365 emergency communications. These teams would be able to point a small dish at a predictable spot in the sky and immediately begin delivering disaster communication support without depending on HF propagation.

A Phase IV payload could also be used to provide TDRSS-like relay of ARISS communications. The 10 minute school contact could now be expanded to hours-long contact with the International Space Station. This opens possibilities for student involvement with experiments aboard the space station.

The Intelsat geosynchronous platform would be able to provide the AMSAT Phase IV Lite payload with approximately 400 watts of DC power for 15 years. The primary payload would also perform the GTO boost phase as well as perform station keeping and antenna pointing once it has arrived on station. Bob, N4HY summarized, "The Intelsat team would be doing all the things nearly impossible for amateurs and that enables AMSAT to do what we do best ... build a communication system that changes amateur radio for the better!"

More details will be published in upcoming editions of the AMSAT Journal.

[ANS thanks Rick, W2GPS and Bob, N4HY for the above information]

SB SAT @ AMSAT $ANS-301.02
Congratulations and Applause for the Symposium Committee

AMSAT News Service Bulletin 301.02
>From AMSAT HQ SILVER SPRING, MD.
October 28, 2007
To All RADIO AMATEURS
BID: $ANS-301.02

This weekend's AMSAT Space Symposium featured:
+ The AMSAT Annual Membership Meeting
+ Board of Directors meeting
+ Over 30 technical presentations
+ Discussion of the future of AMSAT and Amateur Radio in Space
+ Technical Demonstrations
+ Mentoring of students to build their own antenna and make their first satellite contact.

The Symposium was hosted by the Wireless Association of South Hills

Amateur Radio Club and area AMSAT members. The huge success of the Symposium was driven by co-chairs: Kevin Smith, N3HKQ and Pat Sanford, KC4WTT. A wonderfully capable team who ensured their success included:

Jim Sanford, WB4GCS
Dave DeMotte, N3IDH
Richard Crow, N2SPI (student mentoring a succesful satellite contact)
Bill Hill, W3WH (Master of Ceremonies)
Randy George, N3ZK
Robert Timmins, AB3ED
Paul Lusardi, N0VLR
Hank Marzina, KB3FNM
Mary Lou Marzina
Ed Oelschlager, N3ZNI
Jacqueline Gossedin, N3ZEL
Larry Conden, K3VX
Frank Bodro, N3FB
Dan Schultz, N8FGV
Dan McAnn, KB3HVN
Georgeianne Sarco, KB3LIV
Dave Kitzinger, N3DFK

Details and photos of the Symposium will be published in upcoming editions of The AMSAT Journal. Thank you for all your help!

[ANS thanks Martha at AMSAT HQ for the above information]

SB SAT @ AMSAT $ANS-301.03
2008 AMSAT Space Symposium to be Held in Atlanta

AMSAT News Service Bulletin 301.03
>From AMSAT HQ SILVER SPRING, MD.
October 28, 2007
To All RADIO AMATEURS
BID: $ANS-301.03

The AMSAT Board of Directors announced that the 2008 AMSAT Space Symposium will be held in the October timeframe in Atlanta, Georgia. This Symposium will be named the "2008 Harry Yoneda JA1ANG AMSAT Space Symposium" in memory and honor of JA1ANG - Silent Key.

Harry was a former AMSAT Board Member and close friend of many in the group. Harry also was a founding member of JAMSAT.

OSCAR-11 Report

AMSAT News Service Bulletin 301.04
>From AMSAT HQ SILVER SPRING, MD.
October 28, 2007
To All RADIO AMATEURS
BID: $ANS-301.04

Clive, G3CWV says,"OSCAR-11 has been heard from 06 October to 08 October. The beacon switched on as expected, on 06 October, but prematurely switched OFF sometime between 08 and 09 October. Signals were weaker than usual. The premature shutdown has probably caused the watchdog timer to reset, and start a new 20 day cycle. If that has occurred then the beacon should resume transmissions around 29 October 2007."

Clive continued, "I am indebted to John N7ZL, John N3NKC, Thomas HB9SKA, and Peter ZL3TC, for their reports. Many thanks."

The satellite is now in continuous sunlight and this will continue until the start of November, when there will be a short eclipse season, lasting until around 07 January. However the maximum duration of the eclipses will only be about 12 minutes. At this level the satelite might just survive.

The active beacon frequency is VHF 145.826 MHz with AFSK FM ASCII Telemetry.

Listeners to OSCAR-11 may be interested in visiting Clive's website:
http://www.users.zetnet.co.uk/clivew/

[ANS thanks Clive, G3CWV for the above information]

ARISS Status Report For the Week of October 22, 2007

AMSAT News Service Bulletin 301.06
>From AMSAT HQ SILVER SPRING, MD.
October 28, 2007
To All RADIO AMATEURS
BID: $ANS-301.06

1. Five Malaysian School Contacts Successful

Malaysian space visitor Dr. Sheikh Muszaphar Shukor, 9W2MUS, participated in the ARISS program while on board the ISS. Five different groups of Malaysian school children gathered at the National Planetarium in Kuala Lumpur and spoke with Shukor, direct via ground station 9M2RPN. All five of the successful contacts took place over the week of October 14. Former Shuttle astronaut, Robert "Hoot" Gibson attended the final ARISS event and also spoke to Shukor. Shukor returned to Earth on Sunday, October 21 with the Expedition 15 crew. The Star Online ran an article on the first contact with the Malaysian students. See:
http://thestar.com.my/news/story.asp?file=/2007/10/15/nation/19172923&sec=nation

2. School Contacts

The first ARISS contact of Expedition 16 was held on Tuesday, October 23 with students, ages 13 � 14, from Giosu� Carducci in Santa Marinella, Italy. Princess Elettra Marconi visits the school annually as it runs a program, �Guglielmo Marconi.� The program covers the research and experiments which were conducted by Marconi at the National Radioelectric Centre located in Santa Marinella.

3. ARISS International Team Teleconference Held

The monthly ARISS teleconference was held on Wednesday, October 17. Topics of discussion included the 2008 ARISS International Face to

Face meeting, the Columbus antennas and SuitSat-2. A new Canadian delegate was also announced. Meeting minutes have been posted.
See: http://www.rac.ca/ariss/arisstel2007-10-17.htm

4. ARISS Antennas on Columbus

A write up on the Columbus Module ARISS antennas has been posted to the ARISS-Europe Web site. Photos of the antennas and movie clips of their installation and inspection are also available. See:
http://www.ariss-eu.org/columbus.htm

[ANS thanks Carol, KB3LKI for the above information]

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deorbited/returned satellites

AMSAT NEWS SERVICE BULLETIN 302.S1 FROM AMSAT HQ
SILVER SPRING, MD, October 29, 2007
TO ALL RADIO AMATEURS
BID: $ANS-302.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

```
Uplink:   145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

TiungSat-1 is Malaysia's first micro-satellite and in addition to commercial land and weather imaging payloads offers FM and FSK Amateur Radio communication.

TiungSat-1, named after the mynah bird of Malaysia, was developed as a collaborative effort between the Malaysian government and Surrey Satellite Technology Ltd.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

The following is a Q-S-T. AMSAT announces plans for a geosynchronous ham radio satellite, W-R-C 2007 opens in Geneva, D-Star comes to Germany and France and ham radio operators stand down as the California wildfires are contained. Find out the details on Amateur Radio Newsline� report number 1577 coming your way right now.

**

HAM RADIO IN SPACE: AMSAT SAYS HAM RADIO GEOSAT IN PLANNING

Its called Phase 4 Lite and it will likely change the face of ham radio forever. Amateur Radio Newsline's Bruce Tennant, K6PZW, has a peek at the future of a geosynchronous ham radio satellite in Earth orbit:

--

The weekend of October 26th to the 28th has likely changed the face of ham radio space operations. So say two leaders in the Amateur Radio space program speaking at the AMSAT-North America Space Symposium in Pittsburgh, Pennsylvania. That�s they announced that a first-ever geosynchronous ham radio satellite is now in its initial planning.

In satellite talk, geosynchronous means stationary in the sky. From the standpoint of a ground station user, it means always knowing where to point an antenna. No tracking and no guesswork.

At that gathering, AMSAT President Rick Hambly, W2GPS, and Vice-President of Engineering Bob McGwier,N4HY, announced that AMSAT has been in consultation with Intelsat. This, regarding an application of an Intelsat platform carrying amateur radio satellites into geosynchronous orbit.

The Phase IV Lite Geosynchronous Payload is planned to consist of similar transponders already under development for the Phase 3 satellites.   Accelerated development on the digital Advanced Communication Package is anticipated. The Intelsat geosynchronous platform would be able to provide the AMSAT Phase IV Lite payload with approximately 400 watts of DC power for 15 years.

In addition to the on-orbit payload AMSAT plans to develop an earth station attainable by the average ham so that users can immediately take advantage of the audio, digital messaging, and video services of the Phase IV bird. The Advanced Communication Package would be a self-contained earth station which could be sent with amateur radio communication teams or delivered to disaster areas to provide for 24 hour a day, 7 day a week and 3565 days a year emergency communications. These teams would be able to point a small dish at a predictable spot in the sky and immediately begin delivering disaster communication support without depending on the vagaries of High Frequency propagation.

But that�s not all. Hambly and Mc Gwier say that the Phase IV payload could also be used to provide a Tracking and Data Relay System Satellite -like relay of ARISS communications. The current 10 minute school contact could now be expanded to hours-long contact with the International Space Station. This opens possibilities for extended student involvement with experiments aboard the space station.

As the late Roy Neal, K6DUE, might have said: Truly a new world of Amateur Radio.

For the Amateur Radio Newsline I'm Bruce Tennant, K6PZW, in Los Angeles.

--

So when can we expect this new satellite to be on-orbit?, AMSAT says that engineering studies, funding studies, among other negotiations are continuing so no specific date can be set.   However Bob McGuier N4HY observes that the project is far enough along that AMSAT needs to begin planning engineering work and possible construction of such a geosynchronous payload so it is ready if Intelsat says they have a ride for it. (AMSAT-NA)

AMSAT NEWS SERVICE
ANS-308

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:
* Bob McGwier, N4HY, speaking at Texas Microwave Society Meeting
* PCSAT-1 recovery in work
* Over 300 QSOs for Sputnik Satellite Special Event Station
* SatPC32 ver 12.7 released
* ARISS Status - 29 October 2007

SB SAT @ AMSAT $ANS-308.01
Bob McGwier, N4HY, speaking at Texas Microwave Society Meeting

AMSAT News Service Bulletin 308.01
From AMSAT HQ SILVER SPRING, MD.
November 4, 2007
To All RADIO AMATEURS
BID: $ANS-308.01

Bob McGwier, N4HY, Vice President of Engineering for AMSAT, Software Expert, heavy contributor to Software Defined Radios, and all around entertaining speaker will be the guest speaker at the 10 Nov 2007 North Texas Microwave Society Meeting. This meeting will be held at the University of North Texas Student Union building in Denton, TX. People start gathering at 12:00 PM and the meeting starts at 1:00 PM.

With Bob's announcement of AMSAT's Phase 4 Lite project at the AMSAT Space Symposium last weekend, this should be a very interesting meeting. Bob is "up to speed" on all of AMSAT's projects and is deeply involved with Flex Radio and others in Software Defined Radios.

While this is the same day as the NCTECH Hamfest in Azle, TX, you can attend both if you play your cards right. Plan to join us for an informative meeting and help pass the word.

[ANS thanks Keith, W5IU, for the above information]

/EX

SB SAT @ AMSAT $ANS-308.02
PCSAT-1 recovery in work

AMSAT News Service Bulletin 308.02
From AMSAT HQ SILVER SPRING, MD.
November 4, 2007
To All RADIO AMATEURS
BID: $ANS-308.02

PCSAT-1 responded to all RESTORE commands on the 1320Z pass on 02 November 2007.

On the next pass (now in full sun), she remembered it all and was fully operational (though the transmitters were again cross connected meaning that relay had dropped out in the dark over Europe. But we set the relay again and she should be fine. PLEASE limit all operations to DAYLIGHT hours only, and PCSAT-1 should be good for the next few weeks. Also, on the same 145.825, you should also hear ANDE and ARISS. That's 18 passes a day!

RULE: If you see packets from both PCSAT-1 and PCSAT-11 on the same frequency, then STOP digipeating. The transmitters are cross connected and consuming TWICE the battery power (which we don't have). You can confirm what is happening prior to your pass by checking the packets on http://pcsat.aprs.org If you see packets from both the -1 and -11 callsign via the same satgates, then the transmitters are cross connected and should not be used. Also avoid any use after dark.

PCSAT-11 downlink is on 144.39 over North America so all mobiles on the normal APRS channel can be alerted when it is in view.

And full details on http://www.ew.usna.edu/~bruninga/pcsat.html

[ANS thanks Bob, WB4APR, for the above information]

/EX

SB SAT @ AMSAT $ANS-308.03
Over 300 QSOs for Sputnik Satellite Special Event Station

AMSAT News Service Bulletin 308.03
From AMSAT HQ SILVER SPRING, MD.
November 4, 2007
To All RADIO AMATEURS
BID: $ANS-308.03

Many thanks to all stations who managed to have a QSO with the sputnik special event Satellite station GB5OSO, well done! QSL cards have yet to come from the printers so it may be a while before they arrive.

The event went very well with 300+ QSO's in 33 DXCC countries on AO-7, AO-27, SO-51, AO-51 and VO-52, in all 170+ stations were logged many of whom were worked on more than one satellite and special thanks to the two stations who were worked on all 5 birds namely G1OCN and ON5NY. Also many thanks to JA0CAW and JH1EKH who were able to organise a connection via EchoLink to SO-50 and AO-51 whilst they were over Japan. There was also some activity on HF.

[ANS thanks Robert, G8ATE, for the above information]

/EX

SB SAT @ AMSAT $ANS-308.04
SatPC32 ver 12.7 released

AMSAT News Service Bulletin 308.04
From AMSAT HQ SILVER SPRING, MD.
November 4, 2007
To All RADIO AMATEURS

BID: $ANS-308.04

SatPC32 version 12.7 has been released by Erich Eichmann, DK1TB.

What's new in verions 12.7:

1. The program now comes with additional sets of 2D and 3D physical world maps. Via mouse click the user can switch between political and physical maps.

2. The political 2D world maps have been updated. Now they show the border lines of the successor states of the former Soviet Union and the former Yugoslavia.

3. The programs (SatPC32, SatPC32ISS and Wisat32) now support rotor steering with the Italian rotor system ProSistel.

4. The "Uplink Calibration" feature has been expanded. With previous versions this function could only be used with "normal" SSB satellites (SSB on Uplink and Downlink). Now it also works with mixed-mode satellites (Uplink: SSB, Downlink:FM). Sometimes AO-51 is using this mode.

   The "Uplink Calibration" function allows users to automatically calibrate the Uplink frequency for best audio pitch of their downlink signal and to save the change. With future program starts the user will then immediately hear his own downlink when he switches to that satellite, without the necessity to tune around and produce QRM.

   Important: With SSB/FM satellites the SatPC32 control "V" must be switched to "V+" before the "Uplink Calibration" function can be used.

5. The programs (SatPC32, SatPC32ISS,Wisat32) no longer use the IOPort.SYS driver for port access. This driver doesn't work on 64-bit systems. So, no special version of these programs is necessary for 64-bit systems.

   The driver was used to steer the German rotor interface IF-100. Since direct steering of this Interface by SatPC32 is no longer possible the update includes a little server program similar to the rotor driver files for the other interfaces and controllers supported by SatPC32. The new IF-100 server program is only functional with 32-bit systems. The other rotor interfaces and controllers - except the FodTrack interface and the KCT-Tracker - are supported with 32-bit and 64-bit systems.

6. Some minor improvements have been made with SatPC32ISS, WinAOS and WinListen.

[ANS thanks Alan, WA4SCA, for the above information]

/EX

SB SAT @ AMSAT $ANS-308.05
ARISS Status - 29 October 2007

AMSAT News Service Bulletin 308.05
From AMSAT HQ SILVER SPRING, MD.
November 4, 2007
To All RADIO AMATEURS
BID: $ANS-308.05

1. Giosu� Carducci Contact, a Success

The first Amateur Radio on the International Space Station (ARISS) contact of Expedition 16 took place on Tuesday, October 23. Seventeen students from Giosu� Carducci in Santa Marinella, Italy asked one question each of Clay Anderson, KD5PLA as an audience of approximately 265 students, guests and reporters gathered for the event. The audio from this contact was fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers and received 22 connections, of which 3 were repeater nodes, from 6 countries. The audio was also fed into the Internet Radio Linking Project (IRLP) Discovery Reflector 9010. Two television stations, two radio stations and all local newspapers covered the event. A write up with photos and audio may be found on the ARISS-Europe Web site. See:
http://www.ariss-eu.org/2007_10_24.htm

3. AMSAT-NA Space Symposium

The 2007 Radio Amateur Satellite Corporation (AMSAT) Annual Meeting and Space Symposium was held Friday � Sunday, October 26 -28 in Pittsburgh, Pennsylvania. Four presentations were given covering the Amateur Radio on the International Space Station (ARISS) program. The ARISS contact with the Arnold Palmer Hospital for Children, the SuitSat-2 project status, human spaceflight, and the long term impact of the SAREX and ARISS programs were all presented.

4. Space Jamboree Article and Update

A local newspaper, The Fountain County Neighbor, ran an article on the
October
6 Boy Scouts of America Space Jamboree held at Camp Robert Drake in
Oakwood,
Illinois. The Scouts participated in a NASA Mission to Mars Expedition
through
a Digital Learning Lab and approximately 400 witnessed an Amateur Radio
on
the International Space Station (ARISS) contact. Over one hundred scouts

earned their Radio Merit Badges during the event.

[ANS thanks Carol, KB3LKI, for the above information]

immense effort
I rose to my knees, wavered and tottered, and fell prone again. As if I were lifting the whole weight of the world I rose shakily to my feet.

From the house came a woman running, saying, "Oh, what have you done now? You should come in and lie down." She looked at me and a startled expression came upon her face, and for a moment I thought she was going to scream in hysteria. She controlled herself, and put an arm round my shoulders and helped me across the grass. Over a little gravel path, up one stone step, and through a wooden doorway and into a small hallway. From thence it was difficult indeed, for there were many stairs to climb and I was as yet very uncertain and clumsy in my movements.

The house really consisted of two flats and the one which I was to occupy was the upper. It seemed so strange, entering an English home in this manner, climbing up the somewhat steep stairs, hanging on to the rail to prevent myself from falling over backwards. My limbs felt rubbery, as if I lacked full control over them-as indeed was the case, for to gain complete mastery of this strange new body took some days. The two lamas hovered round, showing considerable concern, but of course there was nothing they

could do. Soon they left me, promising to return in the small hours of the night.

Slowly I entered the bedroom which was mine, stumbling like a sleepwalker, jerking like a mechanical man. Gratefully I toppled over on to the bed. At least, I consoled myself, I cannot fall down now! My windows looked out on to both the front and the back of the house. By turning my head to the right I could gaze across the small front garden, on

--

My only difficulties have been when I had a perfectly legitimate passport. Passports merely inconvenience the innocent traveler, causing him to be subjected to ridiculous red tape. Lack of a passport has never hindered a person who had to cross frontiers. However, presumably there have to be passports in order to harass harmless travelers and give work to hordes of often very unpleasant officials. This is not a treatise on how to cross frontiers illegally, so I will just say that without difficulty the three of us entered Czechoslovakia. The guard went his way, and we went ours.

"My home is at Levice," said Jozef, "I want to go home. You can stay with me as long as you like."

Together we made our way to Kosice, Zvolen, and on to Levice, walking, getting lifts, and riding on trains. Jozef knew the country well, knew where to get potatoes or beets or anything which could be eaten.

At long last, we walked up a mean street in Levice to a small house. Jozef knocked, and as there was no reply, knocked again. With extreme cau

AMSAT NEWS SERVICE BULLETIN 309.S1 FROM AMSAT HQ
SILVER SPRING, MD, November 05, 2007
TO ALL RADIO AMATEURS
BID: $ANS-309.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon that is active. Each transponder has a different beacon.

=====
AO-51 ECHO
Catalog number: 28375
Launch date: June 29, 2004

Status: Operational

Current Modes: FM Repeater - V/u
BBS - /u
Telemetry - /u

Analog voice downlink: 435.300 MHz FM
435.150 MHz FM
2401.200 Mhz FM
Analog voice uplink: 145.880 MHZ FM
145.880 MHz USB
145.920 MHz FM
1268.700 MHz FM 67Hz PL tone
Digital Downlinks: 435.150 MHz FM 38k4 Digital, PBP, 1 watt output
435.150 MHz FM 9k6 Digital, Pacsat Broadcast Protocol
2401.200 MHz FM 38k4 bps, AX.25
Digital Uplink: 145.860 MHz FM 9k6 Digital, Pacsat Broadcast Protocol
1268.700 mhz FM 9k6 PBP Digital
Beacon: 435.150 MHz

Mode and Antenna Polarization:
T: Linear
V: Linear
U: TX A (usually digital)LHCP
   TX B (usually analog) RHCP
L: Linear
S: Linear

Broadcast: PECHO-11
BBS: PECHO-12

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)
- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

Foxy's Showtime on Capital FM 25/11/98 7.35pm

Certainty level: 100%

This one, I can say with absolute certainty, is about me. It was recorded on my Sony Recording Walkman on the evening of Wednesday 25 November 1998. It doesn't mention me by name, so the objective observer might have trouble understanding why I'm so sure it's about me. I'm sure, because the harassment had restarted over the period when this piece was broadcast, and what Capital transmitted would have been in context with events at the time. (Sorry if that explanation is somewhat opaque, but I don't really want to embarrass myself by giving an explanation in detail, and an intelligent reader should be able to work it out for him/her self.)

This isn't the first time Capital have "got at" me; they were doing so right at the very beginning in summer 1990, when they said, "if he listens to Capital then he can't be all bad"; and Tarrant made remarks about me in his breakfast show in spring 1994, when he said, "you know this bloke? he says we're trying to kill him. We should be done for attempted manslaughter."

Unfortunately I didn't record those previous, much more conclusive instances of harassment by Capital DJs, and Capital Radio tells me they only keep recordings for three months. But lately I've been recording everything, and here is one product of that recording.

Neil Fox was introducing some petite Swedish songstress, sounded like Amelia, when he said something about her petite-ness ;

"she's a big big girl, actually she's really about tiny, she's this big, would you say what less than....."

then one of his studio staff shouted, "six inches"

then Fox laughed and said, "less than a meter tall, definitely"

What I think the "six inches" referred to should be obvious. I think it's sexual abuse directed at me.

Also there were a lot of words like "crazy", "mad" etc on this programme, which reinforced my belief that this was on purpose directed at myself.

I think Fox may be something of an unwilling participant in this abuse, he doesn't want to be an abuser but the persecutors are using his show and his staff to get at me. This is not the first time this sort of thing has happened from his show; and my guess is that it won't be the last

Jackie King from the Flying Eye 14/3/99

Certainty level: 40%

In early March 1999, Capital Radio alleged they had received some emails, one of which was forwarded to me. It contained the words, "you know this bloke, he says we're trying to kill him, we should be done for attempted manslaughter!" which Chris Tarrant had said in 1994.

Following these emails there was an explosion in abuse activity, both from Capital Radio, and from MI5 themselves. MI5 followed me around and hurled abuse at me. The following audio file contains what may be abuse from the radio station.

Jackie King from the Flying Eye made these remarks on Sunday (14/3/99) lunchtime 12.24pm; "gas main work being, er, HANDLED if you like (laughs, embarrassed) outside Madame Tussauds, Euston Road obviously feeling the backlash of that".

The key word is "handled", which she sounds embarrassed to be saying; to me it looks like an attempt at a sexual slander. Capital Radio aren't even pretending not to get at me any more. I asked Chris Tarrant several times about his remark from 1994, and he has consistently avoided answering.

Virgin Radio-Johnny Boy (21/August/1998)

Certainty level: 60%

On Saturday 15 August 1998 I attended a gathering of contributors to newsgroup uk.misc at London's Victoria railway station. Also present was Simon G, who had previously given this description of what he would be wearing;

At 06:36 AM 13/8/98 GMT, Simon wrote:
>further clarification to aid recognition, i'll be wearing
>a t shirt, a brown suede waistcoat, a brown suede miniskirt,
>& a pair of patchwork leggings (& may have a widebrimmed straw
>hat, too).

It is my belief that my persecutors, who monitor my home telephone line (and consequently read all modem communications including email), were aware of this meeting, and may even have observed the "meat" taking place.

Following the "meat" it seemed to me that one or two attempts were made by my persecutors to portray me as "gay", on the basis of Simon's suede miniskirt, which in their inventiveness my persecutors attributed to me, not Simon. (Just for the record, Simon is hetero, and has agreed to the above email extract being published.) The following item from Johnny Boy's Wheels of Steel (between 7pm-11pm, Friday 21/8/98) is one such attempt.

(conversation) (J=Johnny-Boy, H=Hipster)

J: Texas of course part of V98 this weekend enjoy it if you're going. Keep your eyes out on Sunday in Chelmsford for Hipster, because he's going to be there. What are you going to be wearing?

H: I'll be wearing my, er, my suede shorts.
(sycophantic laughter)

J: and believe me he ain't joking, he ain't joking. OK coming next at Virgin on the Wheels of Steel...

Why do I think Hipster's "suede shorts" refers to Simon's mini-skirt? Because "suede" in both cases (obvious!); because "suede shorts" indicates "gay" which they were trying to pin on me; because "shorts" = something short, such as a "mini"-skirt; and because the two DJs both laughed as soon as Hipster said "suede shorts", they knew what the joke was, they knew that they were meant (and probably paid) to find it funny.

Virgin Radio-Johnny Boy (19/June/1999)

Certainty level: 30%

I'm not quite sure about this one, so I've given it a one in three chance of being about me. First the background.... from mid-March 1999 for some three or four months, every weekend, I bombarded Westminster MPs with faxes about the terrible, all-encompassing MI5 Persecution. (Jesting aside, it really is terrible and all-encompassing, in the UK anyway.) Of course each week some MPs replied; but in June 1999, after I'd been at it some three months, I started getting "covert" feedback from Virgin Radio.

The first feedback I got was from Danny Baker, on Sunday 13th June. That weekend I was sending an article which contained biting criticism of the police inaction in this case. Danny Baker on his Virgin radio show started an angry rant that "he knows it's rubbish", ie. he was rubbishing what I'd said in that weekend's faxed article. Unfortunately I wasn't recording this programme.

The next possible Virgin-Radio feedback was a week later on 19th June 1999. This is contained in the audio file above, in which Johnny Boy on his "Wheels of Steel" programme says;

"and if you would like to put a triple play together, ahhh.... because quite frankly Hipster and me are running out of ideas...."

He goes on to counter Hipster's "how dare you" with a protestation that he is "only joking".

What I reckon is that my article faxed to MPs that weekend was forwarded by one of the recipients to Virgin Radio. My article had included the words;

"I am beginning to run out of both new topics and energy to write these articles."

So what I reckon is that Johnny Boy read the article.... and rephrased the above line "run out of ... new topics" to "running out of ideas". I recognise that this is a pretty tenuous inference to make.... but do listen to the audio file, from the "ahhh...." pause in JB's speech you can guess he is about to say something "risky" and at someone's expense. Anyway, I listen to the Wheels of Steel regularly and will continue to do so, recording it as I always do - so any future funny remarks will get immortalised on these pages!

What analogue methods were used for this pitch-shifting? Were they as
efficient as audio softwares?

Does the meteor shower make a buzzing sound on FM radio stations?

I suppose it depends what exactly you mean by "radio astronomy". Radio astronomers have been extending the original radio techique of Earth Rotation Aperture Sythesis up into the IR and near optical bands recently. As such the highest frequency at which a fringe baseline correlator has been operated for astronomy is now in the visible band.

COAST and the NRAO optical interferometer group have both produced indirect images of the sky using radio correlator methods implemented by very cunning mechanical optical bench designs at visible wavelengths.

>
> > If you read on a little farther you'll find
> > 'blurring the distinction between radio astronomy and infrared astronomy.'

Many of the early microwave groups spun out of radio astronomy sections. The catch is that at least for a while the non-thermal sources get significantly fainter with increasing frequency (fewer higher energy photons get emitted).

>
> > So where do you want to draw the line between radio astronomy and

Although they do study movements of the suns surface by Doppler shift of known reference spectral wavelengths this is something entirely different to what radio astronomers do. Very few big radio telescopes enjoy being pointed at the sun.

>
> I wonder if a space station with a 3,438 GHz AM receiver could pick up

> magnetars, gamma-ray-bursts, supernovae and other high-energy but
> cosmic objects] after demodulating the 3,438 GHz AM carrier wave.- Hide quoted text -

There is no carrier wave (unless you happen to chose a specific naturally occurring spectral wavelength like 21cm neutral hydrogen for instance). The telescope operator choses the frequency and bandwidth they receive - the source is normally a broadband emitter.

Most objects emit broadband thermal radiation determined by their characteristic temperature and broadband non-thermal radiation determined by a combination of shockwaves, magnetic fields and fast particle interactions. It would sound like the white noise on a detuned radio reciever if you were to put it on a speaker. Pulsars are the only obvious exception where there is clear periodic structure in the signal.

Jupiter sometimes provided faintly interesting amplitude modulation of its radio emission that should be within the reach of a decent amateur short wave receiver with a directional antenna to listen into.

Regards,
Martin Brown

> I suppose it depends what exactly you mean by "radio astronomy". Radio astronomers have been extending the original radio techique of Earth Rotation Aperture Sythesis up into the IR and near optical bands recently. As such the highest frequency at which a fringe baseline correlator has been operated for astronomy is now in the visible band. COAST and the NRAO optical interferometer group have both produced indirect images of the sky using radio correlator methods implemented by very cunning mechanical optical bench designs at visible wavelengths.

A radio-wave can travel a larger distance with less attenuation than an infrared or light wave. Objects in the path that allow radio-waves to pass undisturbed can have a serious impact on optical telecommunications.

Microwaves have characteristics that more closely resembles radio-waves than light/infrared waves.

> > > So where do you want to draw the line between radio astronomy and infrared astronomy? There's you're answer.

> Although they do study movements of the suns surface by Doppler shift of known reference spectral wavelengths this is something entirely different to what radio astronomers do. Very few big radio telescopes enjoy being pointed at the sun.

What happens to a radio telescope when directed toward the sun?

> > I wonder if a space station with a 3,438 GHz AM receiver could pick up any extremely-distant audio signals between 20 to 20,000 Hz [from magnetars, gamma-ray-bursts, supernovae and other high-energy but cosmic objects] after demodulating the 3,438 GHz AM carrier wave

> There is no carrier wave (unless you happen to chose a specific naturally occurring spectral wavelength like 21cm neutral hydrogen for instance). The telescope operator choses the frequency and bandwidth they receive - the source is normally a broadband emitter.

I would guess the higher the frequency of the radio-wave reception, the better it is for this application. This is because higher-frequency radio waves can more easily pass through ionospheric elements [such as the heliosphere around our solar system] than lower-frequency radio waves.

The above assumes the reception occurs in space itself [e.g. on a space station]. On Earth, the higher end of the radio spectrum tends to be opaque to the atmosphere while the lower end is blocked by the ionosphere. Hence, if the experiment is done on Earth, you can't go too high or too low [even within the "radio spectrum"]. The limits are stricter on Earth than in outer-space. In space, you don't have these limits as long as you stay in the radio band.

What would the pulsars sound like in this experiment? Square-waves?

I've been to certain websites containing recordings of these emissions. They sound like strong winds.

Make your mind up. You asked about the highest frequency used by radio
astronomers.

They are all electromagnetic radiation. The transparency or otherwise
varies somewhat with wavelength.
>

The receiving electronics get warmed up by the partially focussed
image of the sun. Or in the case of a catadiotric design the secondary
reflector gets warmed up and potentially distorted by thermal
expansion.

Scopes intended to be pointed at the sun are designed with that
purpose in mind.

Not really radio astronomy is now operating between around 35MHz and
upwards. There are difficulties with gettign coherent signals, but
once 3 or more scopes are linked together there are good observables.

The biggest problem for radio astronomy is that radio objects mostly
get dimmer with increasing frequency. And there are some bands like
the terahertz where there are very few natural processes capable of
emitting them.

No. They are sharp narrow pulses roughly 1:100 to 1:1000 mark space
ratio with a broad spectrum of harmonics (a square wave would be 1:1).
You can listen to some pulsar waveforms online at Jodrell Bank:

http://www.jb.man.ac.uk/~pulsar/Education/Sounds/sounds.html

Regards,
Martin Brown

> varies somewhat with wavelength.

What distinguishes them are really our technology:

Radio waves have wavelengths which are much larger than the components we use to receive them.

Microwaves have wavelengths which are comparable in size to the components we use to receive them. In practice, this wavelength band has shifted towards shorter wavelengths as the miniaturization of our electronics has progressed - wavelengths which earlier (50+ years ago) had to be amplified using specially designed microwave valves can nowadays be amplified with more conventional (and much smaller) electronic components.

Optical (IR/light/UV) waves have wavelengths which are much shorter than the components we use to receive them.

Finally, we have X-rays and gamma rays, where normal optics no longer can be used since it's hard or impossible to construct optical elements which refract or reflect them. There we often use photon counters instead. Special optics can sometimes be used for some of these wavelength bands though, such as Wolter telescopes for X-rays which use grazing incidence to its optical surfaces to be able to reflect X-rays.

A common satellite receiver's dish is a mixture of the three first kinds of components: the parabolic reflector is a typical optical component, the LNB uses microwave techniques to convert the 10-12 GHz frequency to something between 1 and 2 GHz instead, and the satellite receiver uses conventional electronics.

No. You hear brief bursts of the station, reflected off the
ionization trail.

This happens with television too. VHF signals can reflect
off other things too, like auroras and patches of intense
ionization in the E layer ("E Layer Skip"). Sporadic E
signals can be extremely strong.

...except that VHF television is vanishing. In Sweden, the very last
VHF TV transmitters will close down this fall - most of them already
have closed down. After that, we only have digital UHF television.
Other European countries are expected to do the same within a few
years.

And UHF signals don't reflect as well off sadly sporadic E layes.

As Laura and others point out, all such definitions are somewhat arbitrary, though I suppose the above is as good as any.

> The usual agreement is that it's radio astronomy when the

If you define "radio" as employing _coherent_ detection, which I think is what Laura is getting at here, then the limit 30 years ago was about 3E13 Hz, i.e., 10 microns in the infrared. The limit today may be higher; laboratory physics experiments have been done with higher frequencies, but I'm not aware of any astronomical observations. The technique is entirely radio-like: mix the incoming signal with a local oscillator (laser in this case), then amplify and detect the beat frequencies.

As others have written in response to the OP's additional query, none
of this has anything to do with amplitude modulation or sound.

I did a living room experiment with my TV's remote control,
it seems to be adequately modulated, changing channels,
raising and lowering sound, muting and so on quite reliably.
I expect laboratory physics experiments could do it at optical
frequencies if they really tried hard (defining radio as employing
_coherent_ detection, that is).

Human natures are fine tuned for gene pool survival.

The way we evolve in the gene pool is that when we're not at war, we're in a race.

Peace and freedom means competition. Some people are uncompetitive. So they don't want to compete. Those people demand slavery.More...

Those who demand slavery are not necessarily poorer or richer, superior or inferior. Those are people that somehow do not like competition.

The farm owning farmers in southern US, for example, do not want to compete with the higher salary the industrial north has, so they demand slavery. This happens despite the fact that the landlords are already way richer than their slaves.

Uncompetitive businesses also do not want customers to be free to choose the best products. They demand enslavements of consumers by restricting consumers choice to choose better products.

As time goes by and consensual productive means to aquire wealth become available, those who oppose competition tends to be the one inferior.

When we're not at war, we're in a race. So in a sense, some part of life is a zero-sum game. The happiness of some superior competitors correlate with gene pool survival of such people. This correlate with the extinction of inferior people and this make inferior people unhappy....page...

For example, women prefer rich smart males and normal males prefer as many females as possible. Actually poor males prefer more money rather than more women, but that's later.

If rich smart males get more females, then rich smart alpha males will survive better in the gene pool. That means, the other males do not get any. Hence, the lesser males will not be happy. They will then come up with monogamy to ration females in equal share for everyone.

Those who are uncompetitive are not going to say honestly that they are disgruntled competitors. They're going to come up with some religious unscientific fairy tales to come up with pretext that freedom, such as free sex is wrong.

In short, whenever someone is happy, whenever something gives pleasure, happiness, and money, you can count that someone, somewhere, somehow, will come up with some fairy tales of who knows what that somehow it's wrong, bad, and should be prohibited.

The preference to snuff of happiness earned by others are called envy. In a sense, those who want to be happy are meant to kill each other with those who are envious.

Unless those who run the fastest also hit the hardest, success is simply a bridge to a gas chamber. Deviation from free fair competition turns life into some form of gun fight.

Not everyone can be appeased in a gun fight. Envy is simply unappeasable. The way to keep pursuing our happiness and still be alive is either to kill, or threaten to kill, those who are envious of us that it's not to their best interests to kill or prosecute us....page...

That's why I strongly support death penalty. Without it, all succesful people will be slaughtered by bigots that don't mind going to jail for it.

It's also the same reason why many ugly women oppose porn. That's because those women are envy bigots.

Think of it this way. Pretty women can just show some skin and make millions of dollars. Ugly women has to sexually serve poor males and get knocked up for much less money.

If this keeps going, pretty women can pick the best males with the best genes and provide their sons with better education, opportunity, and more initial start up capital.

The pretty genes will survive better in the gene pool and the ugly will be outcompeted, like in Europe or Japan. All thanks to porn.

Obviously, pretty porn stars are way better of then ugly wife. Becoming a porn star or prostitute is then one of the best job ever in this world.

However, out of envy, ugly women will want to prevent that. What's their justification? By saying that all the good jobs are so bad that it can't possibly consensual, and hence has to be prohibited.

They said that porn should be prohibited to protect women. Which women? Not the consenting one of course. How in the earth people get protected from consensual offers anyway. It's there to protect disgruntled envy competitors.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)

* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

AMSAT Presentation at HAMCON, Torrance, CA

AMSAT News Service Bulletin 245.01
From AMSAT HQ SILVER SPRING, MD.
September 2, 2007
To All RADIO AMATEURS
BID: $ANS-245.01

AMSAT member Clint Bradford, K6LCS, will be presenting his "Working

AO-51 with your HT" multimedia session at the HAMCON convention Friday, September 7, 2007 in Torrance, California.

He'll be speaking during the Long Beach Amateur Radio Club's special 5:00pm meeting at the Marriott Hotel Convention Center, 3635 Fashion Way, Torrance, CA, 90503-4809. Attendees should download his 4-page tutorial and radio programming matrix before the meeting from http://www.clintbradford.com.

There will be a workable pass of AO-51 right after the meeting!

Clint has been a licensed amateur (and GMRS Licensee KAF3359) since 1994, and has been involved in public service communication for most of that time.

He owns an award winning Web site on the JFK assassination. Professionally, he was sales manager for ADI/ Premier/Pryme, worked for Motorola, and for HRO. He proudly supports AMSAT at all his presentations.

Clint resides in Mira Loma with his wife Karen, her Icelandic horse Mjollnir, and Clint's donkey, Edaward R. Burro.

[ANS thanks JoAnne, K9JKM, for the above information]

AMSAT News Service Bulletin 245.03
From AMSAT HQ SILVER SPRING, MD.
September 2, 2007

To All RADIO AMATEURS
BID: $ANS-245.03

During the period 15 July to 31 August 2007, The satellite has remained silent. Eclipses finished on 20 August. Previous observations indicated that anytime after 10 August there would have been sufficient solar power to support continuous operation.

Owing to the lack of accurate timings, it is impossible to predict when sustained beacon operation will restart, although this is expected any day now. When the beacon starts it is expected to operate 10 days ON followed by 10 days OFF.

The satellite is now in continuous sunlight, and this will continue until 14 November, when a short eclipse season starts.

I have received one reception report, from Jim G3WGM, who heard weak signals at the end of a pass on 01 August. Many thanks JIM.

The Beacon frequencies are -

VHF 145.826 MHz. AFSK FM ASCII Telemetry
UHF 435.025 MHz. OFF
S-band 2401.5 MHz. OFF

Listeners to OSCAR-11 may be interested in visiting my website. The current monthly bulletin contains further details of the satellite's status. If you need to know what OSCAR-11 should sound like, there is a short audio clip for you to hear. The website contains an archive of news & telemetry data. It also contains details about using a soundcard or hardware demodulators for data capture. There is software for capturing data, and decoding ASCII telemetry. The URL is www.users.zetnet.co.uk/clivew/

If you place this bulletin on a terrestrial packet network, please use the bulletin identifier $BID:U2RPT136.CWV, to prevent duplication.

73 Clive G3CWV   xxxxx@amsat.org (please replace xxxxx by g3cwv)

[ANS thanks Clive, G3CWV, for the above information]

+ Eric, W4OTN, AMSAT Area Coordinator for Southeastern Virginia is proposing creating a Satellite Islands on the Air (IOTA) award. He is currently in the process of collecting comments to support his request to the IOTA Board. If you are interested in supporting this new award please submit your comments to Eric via: http://eric-sparks.blogspot.com/2007/08/official-iota-satellite-award-petition.html (careful with the line-wrap!)

+ Ed, WA4SWJ Editor of The AMSAT Journal reported this week that the July/August issue of the Journal was uploaded to the printer on August 28. This issue should be on its way to your mailbox shortly.

+ Information about an ESA student project with a 30 kilometre tether which will perform a deorbit manoeuvre of a capsule is now available on-line at http://www.yes2.info/. This is scheduled to fly in late September. The tether is expected to be visible over parts of Africa the Middle East, South America (below 55�S), Antarctic Peninsula (above 82�S), and Eastern Russia and western Alaska (above 170�E).

+ The Smallsat conference held in August published the abstracts from the papers presented including one by Kyle Leveque KG6TXT`on GENSO - the Global Educational Network for Satellite Operators. He will be presenting a further update on this network at the AMSAT Symposium in October. See http://www.smallsat.org/tech-sessions for more information.

+ The presentation slides from the CalPoly Summer Workshop are available at http://cubesat.atl.calpoly.edu/pages/workshops/2007-summer-workshop.php, Included is an update on the Delfi-C3 sunlight only U/V transponder mission due for launch from India later this year.

+ The ARRL Great Lakes Division Convention is being held on Saturday, September 22, 2007 at the Sheraton Independence Hotel in Independence, Ohio. This is near Cleveland. Jim Sanford, WB4GCS will be making a presentation on AMSAT's Eagle Satellite. More information about the convention can be found at: http://www.2007gldc.org/.

[ANS thanks JoAnne, K9JKM, for the above information]

1. ARISS Contact with Nanjing, China, a Huge Success

On Sunday, August 26, the first Amateur Radio on the International Space Station (ARISS) contact with a Chinese school was performed with youth from Nanjing No. 3 High School in Nanjing, Jiangsu. Twenty students spoke with astronaut Clay Anderson, KD5PLA. Twenty questions were asked and answered as approximately 300 students and parents looked on. A vice-director of MII (Chinese FCC) was present during the contact, as well as a vice mayor of Nanjing and a group of 60 local government officials. Mr. Chen, BA1HAM, and Mr.Tong, BA1AA, two of the veterans in Chinese Amateur Radio Society, also attended. Local hams and businesses supported the students with the contact. ARISS Chairman Frank Bauer, KA3HDO, was invited to speak via teleconference to the students and other participants prior to the contact. Ten television stations, including local, provincial, and national stations, as well as another television team from Hong Kong reported on the event. The news story was also picked up by several radio stations, and was broadcasted live in several provinces across China. It was also covered by thirty newspapers. Live video of the contact was also available on sina.com and qq.com, which are two major internet news portals in China, and they also put the contact on their front pages as featured reports. A headline about the upcoming school contact in China was posted on the MSN startup window, so every Chinese MSN messenger user would see this notice. Many other websites published their own press releases. Through all media avenues, more than 100 million people were reached!

The audio for this event was fed into EchoLink AMSAT (101 377), JSDXC (337 784) and JK1ZRW (277 208) servers, receiving 106 connections from 10 countries, of which five were repeater nodes. (A fourth server in Bangkok was also used, although it was not monitored for connections.) The audio was also fed into the IRLP Discovery Reflector 9010 and received 5 connections and another 9 picked up on the streaming audio. Several press releases may be viewed on the following sites:

2. Upcoming School Contacts

Gail Borden Public Library in Elgin, Illinois has been slated for an Amateur Radio on the International Space Station (ARISS) contact on Wednesday, September 5 at 18:38 UTC. A multi-media educational exhibit entitled, �SPACE: Dare to Dream,� will be on display for four months and is expected to draw 350,000 people of all ages. The exhibit will include the Forest of Dreams where the night sky rises, Galileo�s studios, and a Saturn V section. Other NASA exhibits will be on display, all to encourage the public to join the library�s reading program � �Mission: Read.� In addition to these ongoing displays, many special programs with presentations and hands on activities will be offered throughout the summer. Veteran astronaut Dr. Janice Voss visited on July 10. On the day of the event, space videos will be shown and a slideshow of the crew and earth observation photos will be presented during the contact. In concluding the event, the staff will run the video, �NASA back to the Moon.� The collaborative exhibit and program partners are Adler Planetarium, Chicago, IL; Fermilab, Batavia, IL; Planetary Studies Foundation, Galena, IL; Lizzadro Museum of Lapidary Art, Elmhurst, IL; NASA Glenn Research Center, Cleveland, OH; SciTech, Aurora, IL. Extensive media coverage is planned through newspapers, magazines, television, radio and the internet.

3. ARISS International Meeting Held

The monthly Amateur Radio on the International Space Station (ARISS) International Team teleconference was held on Tuesday, August 21. Topics discussed included the Malaysian space participant, SuitSat-2 and Columbus Module antennas. The minutes have been posted to the ARISS website. See: http://www.rac.ca/ariss/arisstel2007-08-21.htm

[ANS thanks Carol, KB3LKI, for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

Yes I think top-posting is the way to go these days, a normal PC screen
holds alot more text than in the old days, and people reply to specific
topics so the people already know what it's all about, and if I reply
to a specific question I'll quote that one ,so kill me :)

Actually (not complaining - just noting for those who don't know) you
can also receive single meteors entering the atmosphere,
not only meteor shower.
Tuning the SSB radio to a tv carrier far far away will give you a 'ping'
every time a meteor hits between you and the station, the farther away
the more pings you get.

http://www.gravitywell.org/misc/misc.htm
to show you what it sounds like (no I'm not a webdesigner either :)

To the best of my knowledge the station I'm tuned in on is in the baltic,
and I live in Sweden, so across the entire baltic sea I get to hear alot of
pings... I also have a feeling they'll continue using analogue tv for a while.

>> This happens with television too. VHF signals can reflect
>> off other things too, like auroras and patches of intense

The problem with top posting is the respondent doesn't actually
need to read what you said.

--

'we establish by definition that the "time" required by
light to travel from A to B equals the "time" it requires
to travel from B to A' because I SAY SO and you have to
agree because I'm the great genius, STOOOPID, don't you
dare question it. -- Rabbi Albert Einstein

http://www.androcles01.pwp.blueyonder.co.uk/Smart/tAB=tBA.gif

'we establish by definition that the "time" required by
light to travel from A to B doesn't equal the "time" it requires
to travel from B to A in the stationary system, obviously.' --
Heretic Jan Bielawski, assistant light-bulb changer.

Ref: news:1188363019.673281.67710@k79g2000hse.googlegroups.com

"SR is GR with G=0." -- Uncle Stooopid.

The Uncle Stooopid doctrine:
http://sound.westhost.com/counterfeit.jpg

"What can be asserted without evidence can also be dismissed without
evidence." -- Uncle Stooopid.

"Counterfactual assumptions yield nonsense.
If such a thing were actually observed, reliably and reproducibly, then
relativity would immediately need a major overhaul if not a complete
replacement." -- Humpty Roberts.

Rabbi Albert Einstein in 1895 failed an examination that would
have allowed him to study for a diploma as an electrical engineer
at the Eidgen�ssische Technische Hochschule in Zurich
(couldn't even pass the SATs).

According to Phuckwit Duck it was geography and history that Einstein
failed on, as if Eidgen�ssische Technische Hochschule would give a
damn. That tells you the lengths these lying bastards will go to to
protect their tin god, but its always a laugh when they slip up.
Trolls, the lot of them.

"This is PHYSICS, not math or logic, and "proof" is completely
irrelevant." -- Humpty Roberts.

AMSAT NEWS SERVICE
ANS-252

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

******************* AMSAT 2007 Space Symposium *************************

The Wireless Association of South Hills Amateur Radio Club announces the 2007 AMSAT Space Symposium will be held at the Pittsburgh Airport Marriott Hotel on Friday, October 26 through Sunday, October 28, 2007. The AMSAT web team has posted informational pages on the AMSAT web site. You can find the announcement with many links at:
http://www.amsat.org/amsat-new/symposium/2007/index.php

* ARISS Status - 3 September 2007

SB SAT @ AMSAT $ANS-252.01
September 11th

AMSAT News Service Bulletin 252.01
From AMSAT HQ SILVER SPRING, MD.
September 9, 2007
To All RADIO AMATEURS
BID: $ANS-252.01

As amateur radio operators, we all know "when all else fails, there is still amateur radio!" September 11th is a prime example of preparedness. President Bush has declared September as Emergency Preparedness Month and we share in responsibilities to our communities in times of communications disasters.

I, for one, was directly involved with 9/11 emergency comms on a professional level and admired that during this time amateurs were providing parallel comms. I wasn't home for five days to insure emergency communications were in place to serve the needs of the area and the organization I work for.

Keep those batteries charged and know what frequencies to monitor locally and be prepared to drop in an assist. This is true for any area of the world you may be at when something can suddenly happen.

[ANS thanks Dee, NB2F, for the above information]

/EX

SB SAT @ AMSAT $ANS-252.02
AMSAT September 15th Deadline

AMSAT News Service Bulletin 252.02
From AMSAT HQ SILVER SPRING, MD.
September 9, 2007
To All RADIO AMATEURS
BID: $ANS-252.02

Ballots must be received in Silver Spring by September 15th. This is for the BOD election. Also, this is the deadline for those that are attending the Pittsburgh Symposium to obtain special discounted rates. You can save a few dollars by registering before September 15th for the activities planned at the Symposium. Please plan early to attend and enjoy all that is offered. See the attached headline for more info.

[ANS thanks Martha for the above information]

/EX

SB SAT @ AMSAT $ANS-252.03
OSCAR-7 The Old/New Satellite

AMSAT News Service Bulletin 252.03
From AMSAT HQ SILVER SPRING, MD.
September 9, 2007
To All RADIO AMATEURS
BID: $ANS-252.03

AO-7 is one of the early satellites amateurs had to work with. Since its miraculous emergence from a battery problem, it has been an available "other" satellite to use. It has transponders on it so SSB is the normal mode of ops with several QSO's allowed at a time. Numerous reports of its switching between mode A & B have been verified.
It has a much larger footprint than AO-51 and is in view much longer.
Dust off those mode A receivers (HF) and try to make a contact on this bird. This will prepare you for the upcoming HEO satellites Phase 3 E and Eagle. I was told that many CQ's go unanswered for lack of operators listening. It may take a little more effort to use, however, it's more fun and rewarding.

[ANS thanks John, LA2QAA, for the above reminder]

Amateur Radio on the International Space Station (ARISS) Status Report
September 3, 2007

1. ARISS - Amagasaki Contact Successful

On Tuesday, August 28, Amagasaki Child Science Hall in Amagasaki, Hyogo, Japan experienced an Amateur Radio on the International Space Station (ARISS) contact. Astronaut Clay Anderson, KD5PLA, answered twenty questions put to him by seventeen students. The contact was organized in part to help celebrate the 90th anniversary of the founding of Amagasaki City. Children studied the history of Amagasaki, its economic growth and the environmental issues associated with that growth. Through this contact, students learned about space and were able to practice their English. More information will follow when available.

2. Successful ARISS Contact with Ashland Greenwood High School

On Wednesday, August 29, an Amateur Radio on the International Space Station (ARISS) contact took place between Ashland Greenwood High School in Ashland, Nebraska and Clay Anderson, KD5PLA, aboard the ISS. Anderson, an Ashland Greenwood alumnus, answered 24 questions posed to him by 8 students, as twenty-one people gathered around the radio. The contact was broadcast on the school's cable television station so that all 839 students could listen in. It was also available on the school's website and publicized to the parents. Reporters from three television stations, three newspapers and one radio station covered the event. Twenty-four ham stations from 7 countries connected to EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers, including 4 repeater nodes. IRLP received 10 connections from the U.S.A. and Scotland and 7 connections to the streaming audio on its website.

Video of the event may be viewed on the News radio 1110 KFAB website.
See:
http://www.kfab.com/cc-common/news/sections/newsarticle.html?feed=159377&article=2577691

The Ashland Greenwood Public School website posted this story:
http://news.agps.org/vnews/display.v/ART/2007/08/28/46d5ea4755cdd

The Lincoln ARC posted news clips from Channel 8 and Channel 10/11. See:
http://www.146760.net/cgi-bin/yabb2/YaBB.pl?num=1188431470/0

The Journal Star, the Omaha World-Herald and KETV also ran articles:
http://journalstar.com/articles/2007/08/30/news/local/doc46d60ab04e864109929910.txt
http://www.omaha.com/index.php?u_page=2798&u_sid=10119034

http://www.ketv.com/technology/14006509/detail.html

3. Upcoming School Contacts

An Amateur Radio on the International Space Station (ARISS) contact has been scheduled for M. L. King Academy (formerly Alexander Macomb Academy) in Mount Clemens, Michigan on Tuesday, September 11 at 16:06 UTC. The academy is a Title 1 school located in a suburb of Detroit and has a population of approximately 66% African American and 30% Caucasian students. Nearly 80% of the students and their families are economically disadvantaged. Students in grades K- 6 will study space and the history of spaceflight. They will participate in related hands on activities and will use several resources available on the NASA education website. As a result of their space science research, lower grades will create posters and upper grades will produce Power Point presentations. All students will be able to witness the contact through the school's television equipment. Media outlets have been invited to report on the event. The audio from this event will be fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers, as well as being fed into the IRLP Discovery Reflector 9010.

An Amateur Radio on the International Space Station (ARISS) event has been planned for Westbrook Intermediate School in Clear Creek, Texas on Friday, September 14 at 18:40 UTC via the telebridge station W6SRJ in California. Westbrook is a gifted and talented magnet school with a program known as Webster Academy - Visions in Education (WAVE), which started at Webster Academy in 1996. The audio from this event will be fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers, as well as being fed into the IRLP Discovery Reflector 9010.

4. Article on Richmond Community Center Contact

The Queens Courier ran an article on the August 7 Amateur Radio on the International Space Station (ARISS) contact with the One Stop Richmond Community Center in New York. See:
http://www.queenscourier.com/articles/2007/08/24/news/regional_news/queens_courier/news/news16.txt

5. Nanjing - ARISS Contact Publicity

On Sunday, August 26, China's Nanjing No. 3 High School in Nanjing, Jiangsu participated in an Amateur Radio on the International Space Station (ARISS) contact - the first for China. It received extensive media coverage. Video of the contact may be found at:
http://tech.sina.com.cn/d/bn/2007-08-26/19421289.shtml

A photo report may be viewed here:
http://en.chinafotopress.com/index/onegroup?gid=1717212

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deorbited/returned satellites

AMSAT NEWS SERVICE BULLETIN 253.S1 FROM AMSAT HQ
SILVER SPRING, MD, September 10, 2007
TO ALL RADIO AMATEURS
BID: $ANS-253.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon.

=====

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

```

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

- AMSAT News Service (ANS)
- General satellite discussion (AMSAT-BB)
- Orbit data (KEPS)
- Manned space missions (SAREX)
- District of Columbia area (AMSAT-DC)
- New England area (AMSAT-NE)
- AMSAT Educational Liaison mailing list (AMSAT-EDU)
- AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

WH6PN
Contact is a go for: Sat 2007-09-29 16:28 UTC 16 deg

The audio for this event will be fed into the EchoLink *AMSAT* (101
377)
and *JK1ZRW* (277 208) Conference Room servers. The audio from this
event
will also be fed into the IRLP Discovery Reflector 9010. We hope to
have
good two way audio from this contact.

As we do normally, as soon as audio is suitable for transmission over
amateur radio, we start feeding audio of set up activities from about
25
minutes prior to the start of the actual contact into EchoLink for
listeners who enjoy listening in on these proceedings.

Please note that there are automatic breaks in the audio transmission
every
2.5 minutes during the event and while we listen to preparations going
on
for this contact. Each audio break is approximately 1 second long.
Please
configure your systems to not time out during times of inactivity or
ongoing audio transmissions.

For everyone's information and future reference. When any ARISS event
is
supported through the IRLP "Discovery" Reflector 9010, audio is
automatically streamed to the Internet.

It is then available via the "Discovery" Reflectors companion web site

www.discoveryreflector.ca . Once on its main page, select "Live

Streaming
Audio" on the left side bar and follow the prompts.

More directly the URL is as follows:
www.discoveryreflector.ca:8000/listen.pls

The audio on the Internet is typically delayed by about two minutes.

AMSAT NEWS SERVICE
ANS-259

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

******************* AMSAT 2007 Space Symposium *************************

The Wireless Association of South Hills Amateur Radio Club announces the 2007 AMSAT Space Symposium will be held at the Pittsburgh Airport Marriott Hotel on Friday, October 26 through Sunday, October 28, 2007. The AMSAT web team has posted informational pages on the AMSAT web site. You can find the announcement with many links at:
http://www.amsat.org/amsat-new/symposium/2007/index.php

****

In this edition:

* New launch date for Netherlands Delfi-C3
* AO-51 Schedule for September Includes V/U FM, L/S FM, SSB, and L/U
* AMSAT at the LA County Fair
* Three Satellites Spur Activity on 145.825 MHz Packet
* Satellite Shorts From All Over
* ARRL Announces 1296 MHz WAS #1
* ARISS Status Report for the Week of September 10, 2007

SB SAT @ AMSAT $ANS-259.01
New launch date for Netherlands Delfi-C3

AMSAT News Service Bulletin 259.01
>From AMSAT HQ SILVER SPRING, MD.
September 16, 2007
To All RADIO AMATEURS
BID: $ANS-259.01

The Delfi-C3 team has been informed by its launch broker that the launch of Delfi-C3 has been moved to December, 2007.

The two major factors that have contributed to the postponement of the launch are weather and the Indian launch schedule. The weather effect on the launch is the typhoon season in India, which lasts from mid-October until December. The launch schedule is dependent on mission priorities.

In the meantime the Delfi-C3 team will continue to work on futher testing parts of the satellite and preparing for the operations phase. As soon as more information regarding the launch of Delfi-C3 is available it will be available on the Delfi-C3 website.

For downloads related to the press presentation (promotional movie, pictures, presentations) please go to http://www.delfic3.nl/press/

Delfi-C3 will have a telemetry downlink in the amateur satellite segment of the VHF amateur radio frequency band. Telemetry decoding software will be made available to participating amateur radio operators and universities which allows them to decode and display real time telemetry. This software will allow for uploading received telemetry date to the central Delfi-C3 ground station via the Internet for data processing. The Delfi-C3 team would like to invite all interested radio amateurs to receive, decode and forward telemetry data to the Delfi-C3 ground station.

Delfi-C3 includes a mode UV linear transponder. The satellite will be in telemetry only mode for approximately the first three months of the mission, after which it is switched to transponder mode.

Delfi-C3 Frequencies:

+ Primary telemetry downlink: 145.870 MHz 1200 Baud BPSK AX.25 400mW
+ Backup telemetry downlink: 145.930 MHz 1200 Baud BPSK AX.25 400mW
+ Linear transponder passband downlink: 145.880 - 145.920 MHz (inverting) 400mW PEP
+ Linear transponder passband uplink: 435.570 - 435.530 MHz
+ Transponder mode beacon: 145.870 MHz CW (10dB below transponder PEP)

[ANS thanks the Delfi-C3 team for the above information]

/EX

SB SAT @ AMSAT $ANS-259.02
AO-51 Schedule for September Includes V/U FM, L/S FM, SSB, and L/U

AMSAT News Service Bulletin 259.02
>From AMSAT HQ SILVER SPRING, MD.
September 16, 2007
To All RADIO AMATEURS
BID: $ANS-259.02

Drew, KO4MA, AMSAT-NA Vice President of Operations described the AO-51 Satellite Schedule for September. Drew said, "We are currently running

370 mW on TXA (435.150) and 630 mW on TXB (435.300). Power levels will continue to increase as eclipses get shorter, leading up to 10 weeks of continuous sun in early 2008."

Drew continued, "These are going to be interesting times. Keep in mind that anytime we have something other than telemetry running on TXA (i.e. L/U repeater), we may have to interrupt it occasionally for telemetry and satellite maintenance. Our lead command station, Gould WA4SXM, has been doing an outstanding job of squeezing every last drop of power for the downlinks."

AO-51 just completed 5 days of Mode L/S FM repeater operation. The schedule for the remainder of September 2007 is as follows:

September 14 - September 17

FM Repeater, V/U
Uplink: 145.920 MHz FM, No PL Tone
Downlink: 435.300 MHz FM
Downlink: 435.150 MHz FM, 9k6 Telemetry Only

September 17 - September 21

SSB/FM Repeater, V/U
Uplink: 145.880 MHz USB
Downlink: 435.300 MHz FM
Downlink: 435.150 MHz FM, 9k6 Telemetry Only

September 21 - October 1

FM Repeater, V/U
Uplink: 145.920 MHz FM, No PL Tone
Downlink: 435.300 MHz FM

FM Repeater, L/U (subject to interuption for satellite maintenance)
Uplink: 1268.700 MHz FM, No PL Tone
Downlink: 435.150 MHz FM

[ANS thanks Drew, KO4MA for the above information]

SB SAT @ AMSAT $ANS-259.03
AMSAT at the LA County Fair

AMSAT News Service Bulletin 259.03
>From AMSAT HQ SILVER SPRING, MD.
September 16, 2007
To All RADIO AMATEURS
BID: $ANS-259.03

As part of the Amateur Radio Expo at the Los Angeles County Fair,

AMSAT member Clint Bradford, K6LCS, is manning an AMSAT booth.
The Expo runs weekends throughout the Fair.

"It's been an AMSAT week," Clint reports. "I gave my "Working AO-51 with your HT" presentation Friday night at the annual HAMCON conference in Torrance. We had 62 people in attendance, including Gordon West and Cathy Gardenias. And right after that presentation, we had a great pass of AO-51 that we worked from the top of the conference hotel's parking structure.

"Then on to the LA County Fair for all day Saturday and Sunday. Amateur Radio is well-represented here, with over 300 feet of booth space. Our booth is a 10x10 E-ZUP, with a slideshow running with photos and "stimulating" information. Handouts include a special "Fair Edition" of AMSAT News, and other material.

"If you are planning a trip to the Fair, we are set up outside between Commercial Buildings 4 and 6."

The Los Angeles County Fair runs September 7-30 this year. It is the largest county fair in the United States and retains its impressive ranking of fourth among the top 50 fairs and festivals in all of North America. The all-time record attendance was 1,612,097 over 24 days in 1991. Fair attendance in 2006 was the highest since that record-breaking year, clocking in at 1,427,656. For more Fair information, their Web site is... http://www.lacountyfair.com

[ANS thanks Clint, K6LCS for the above information]

SB SAT @ AMSAT $ANS-259.04
Three Satellites Spur Activity on 145.825 MHz Packet

AMSAT News Service Bulletin 259.04
>From AMSAT HQ SILVER SPRING, MD.
September 16, 2007
To All RADIO AMATEURS
BID: $ANS-259.04

The ARISS system aboard the International Space Station has frequently enabled its packet digipeater for APRS on 145.825 using the path of "VIA ARISS".

Additionally, by mid-September PCSAT-1 should enter a FULL SUN OPERATING PERIOD. This may present a period of a few weeks when we will have THREE APRS satellites flying in constellation: ISS, PCSAT-1, and ANDE, all operating 145.825 MHz.

This will assure over 18 passes per day. And since they all respond to the same path "VIA ARISS" then which satellite is in view is transparent to the user. Two-hop paths via ARISS,ARISS might also be possible.

Bob, WB4APR noted, "In order for the global APRS internet system to capture all these packets, we do need volunteer ground stations to place an IGATE to monitor all packets on 145.825 MHz downlinks. In many cases, a simple omni antenna connected to APRS is all that is needed."

Successful packet digipeating on 145.825 can be seen on either: http://www.ariss.net or http://pcsat.aprs.org

Bob added, "We are also working on getting GO-32 enabled for APRS operation at 9600 baud. But since it uses different uplink and downlink fequencies, it cannot be used for multiple-APRS-satellite operations."

[ANS thanks Bob, WB4APR for the above information]

SB SAT @ AMSAT $ANS-259.05
Satellite Shorts From All Over

AMSAT News Service Bulletin 259.05
>From AMSAT HQ SILVER SPRING, MD.
September 16, 2007
To All RADIO AMATEURS
BID: $ANS-259.05

+ Hotel reservations in the reserved block of rooms for the AMSAT Symposium in Pittsburgh are being quickly booked up. This is a reminder to visit the Symposium web page and make your reservation.

+ Robert, G8ATE and John, G7HIA will be using the special call sign GB5OSO starting on the 4th October for one month to celebrate the 50th Anniversary of the launch of the first earth orbiting satellite SPUTNIK ONE on that date in 1957. All of the available analogue satellites will be used as time permits. A special QSL card will be available after the event.

+ Special congratulations to Beth (KD5CAA) and Kenneth Ransom (N5VHO ARISS/ISS Ham Radio Project Engineer) on the birth of their daughter Angela Hope on September 10, 2007! Everyone is reported doing well.

+ John, LA2QAA, administrator of the AO-7 resource page reminds satellite operators of these AO-7 pages:
http://www.planetemily.com/ao7/ao7log.php

http://www.observations.biz/Observations_from_Norway/howmuchpowerisenough.htm

http://www.observations.biz/Observations_from_Norway/how_much_power_is_enoug

While no prizes or certificates are currently being offered for the number of contacts via AO-7 the Resource Page includes an activity log from active stations on the satellite. In recent weeks we have received a report of the milestone of the 2000th QSO via AO-7 by G1WPR. F3ZD reports his AO-7 log since May, 1975 has 4276 QSOs via AO-7. The current leader in the logged number of contacts on the Resource Page is K3SZH.

+ The operating schedule for the FO-29 satellite is available on-line at: http://www.ne.jp/asahi/m-arai/gkz/satinfo/fo29e.htm

+ Clive, G3CWV reports from Hitchin, North Hertfordshire, in the UK that nothing has been heard from OSCAR-11. The satellite is operational in sunlight but the current eclipses ended on August 20. Prior experience with OSCAR-11 suggest that operation should have been restored at this point. Clive would appreciate any reception reports of the satellite. Please post to AMSAT-BB or directly to g3cwv@amsat.org. The frequency of the VHF beacon is 145.825 MHz, mode FM. For more information see: http://www.users.zetnet.co.uk/clivew.

[ANS thanks everyone for the above information]

SB SAT @ AMSAT $ANS-259.06
ARRL Announces 1296 MHz WAS #1

AMSAT News Service Bulletin 259.06
>From AMSAT HQ SILVER SPRING, MD.
September 16, 2007
To All RADIO AMATEURS
BID: $ANS-259.06

Al Ward, W5LUA, of Allen, Texas, is the first person to achieve the ARRL's Worked All States (WAS) on 1296 MHz, making him 1296 MHz WAS #1. Ward first started on his pursuit January 25, 1977, with his first 1296 MHz contact with Leroy May, W5HN (SK). His 30 year quest ended last week, with confirmed contacts with Wyoming, Utah and Idaho, giving Ward his last three needed states, thanks to Paul Perryman's, WA5WCP, EME DXpedition.

"I couldn't have done this without Paul," Ward said. "Also, thanks to Ron Roche, K0ALL, and Barry Malowanchuk, VE4MA, in North Dakota for number 47 in August. Without them, it just wouldn't have been possible." After collecting his 50th QSL card, Ward drove from his home in Texas to Little Rock, Arkansas so ARRL President Joel Harrison, W5ZN, could verify his cards and complete his WAS paperwork. "Verifying QSL cards from 30 years of activity brought back a lot of memories of several stations active on 1296, many who are Silent Keys now," Harrison said.

[ANS thanks the ARRL Letter Vol. 26, No. 37 for the above information]

SB SAT @ AMSAT $ANS-259.07
ARISS Status Report for the Week of September 10, 2007

AMSAT News Service Bulletin 259.07
>From AMSAT HQ SILVER SPRING, MD.
September 16, 2007
To All RADIO AMATEURS
BID: $ANS-259.07

1. Successful Contact with Gail Borden Public Library

Youth from Elgin, Illinois experienced an ARISS contact on Wednesday, September 5. Astronaut Clay Anderson, KD5PLA, fielded 20 questions put to him by 16 children visiting the Gail Borden Public Library. The contact was held in conjunction with the multi-media educational exhibit "SPACE: Dare to Dream." Approximately 100 people witnessed the contact, including the mayor of Elgin and three city council members. Two administrators from School District U-46 attended, as did reporters from the Daily Herald and Elgin Courier newspapers. Children were interviewed pre-contact by WGN Radio and the event was reported on by WBBM News Radio 780 in Chicago. Video was also streamed over the internet.
The audio from this event was fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers, and received 16 connections from 6 countries and 3 repeater nodes. Five connections were also made to the IRLP Discovery Reflector 9010. The Courier News ran an article covering the event:
http://www.suburbanchicagonews.com/couriernews/news/544694,3_1_EL06_A1SPACE_S1.article

To view the Daily Herald story, complete with slide show and audio, see:
http://www.dailyherald.com/story/?id=32229

2. Successful Contact with M. L. King Academy

An ARISS contact was completed with the M. L. King Academy (formerly Alexander Macomb Academy) in Mount Clemens, Michigan on Wednesday, September 12. The academy is a Title 1 school located in a suburb of Detroit and has a population of approximately 66% African American and 30% Caucasian students. Nearly 80% of the students and their families are economically disadvantaged. Students in grades K- 6 will study space and the history of spaceflight. They will participate in related hands on activities and will use several resources available on the NASA education website. As a result of their space science research, lower grades will create posters and upper grades will produce Power Point presentations. All students will be able to witness the contact through the school's television equipment.

3. Successful Contact with Westbrook Intermediate School

An ARISS event with Westbrook Intermediate School in Clear Creek, Texas took place on Friday, September 14 via the telebridge station W6SRJ in California. Westbrook is a gifted and talented (GT) magnet school with a program known as Webster Academy - Visions in Education (WAVE), which started at Webster Academy in 1996. This GT magnet brings together over 500 gifted and talented students from across the district to participate in a unique program design. One of the opportunities available to WAVE students is an amateur radio license class. In partnership with the Clear Lake Amateur Radio Club, over 300 students have earned their ham radio license over the last 8 years. At any time, there are approximately 100 hams in attendance at the school. Students and teachers have discussed the ARISS contact in their classes, and all students have participated in the development of questions for Clay Anderson.

4. Upcoming School Contacts

Mitchell Elementary School, a NASA Explorer School (NES), in Ann Arbor, Michigan has been slated for an ARISS contact. The event is planned for Monday, September 17 at 13:39 UTC. The use of Amateur Radio provides for the integration of technology, math, science, geography, writing, reading, and speaking through hands on applications of these concepts. Amateur radio operators in Ann Arbor will present talks and demonstrations covering these concepts prior to the actual contact with the ISS. Through this experience, students will gain an understanding of amateur radio technology and it's potential. Students will visit websites to view and listen to previous conversations with the astronauts. Mitchell Elementary will download and install tracking software onto the school lab computers to follow the space station as it passes by on the day of the contact. Using computer software,

students will write essays explaining why they should be chosen to fly on the ISS. Local, state and federal officials will be invited to attend the event. Television, radio, newspapers, and the internet will cover the contact. The audio from this event will be fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers, and into the IRLP Discovery Reflector 9010.

Pueblo Magnet High School in Tucson, Arizona plans to participate in an ARISS contact on Friday, September 21 at 15:04 UTC. The school formed an Amateur Radio Club last year to involve students in math and science. Donations of radio equipment were made by the local Catalina and Green Valley Amateur Radio Clubs. Five students have already earned their Technician licenses and one has upgraded to General Class. Science, art, and the economic departments are involved in this endeavor; the Special Education department has also been included - some students who will participate in this event are autistic. Eighty percent of the students come from economically disadvantaged families. Local and national media coverage is anticipated. The audio from this event will be fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers, and into the IRLP Discovery Reflector 9010.

5. ARISS - Ashland Greenwood Contact Receives Publicity

Omaha Newstand.com ran an article on the ARISS contact with Ashland
Greenwood
High School. The contact took place on August 29. See:
http://www.zwire.com/site/index.cfm?newsid=18782692&BRD=2712&PAG=461&dept_id
=556245&rfi=8

[ANS thanks Carol, KB3LKI for the above information]

I've been trying to hit GO-32 on APRS. According to the pages, it's supposed to be operational, with the right settings. I'm using a Kenwood TH-D7A(G) HT. I can hear it quite clearly at 9600 baud, but can't decode anything on APRS, or put any packets up. The next step is to set the TNC to "PACKET" and decode the raw downlink.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
and off within the 10 Minute window.

3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

SB SAT @ AMSAT $ANS-266.03
GO-32 enabled for experimental APRS access

AMSAT News Service Bulletin 266.03
From AMSAT HQ SILVER SPRING, MD.
September 23, 2007
To All RADIO AMATEURS
BID: $ANS-266.03

The GO-32 Satellite TECHSAT-1B team has announced experimental 9600 baud APRS access for mobile and tactical APRS on a not-to-interfere basis with the existing PACSAT BBS.

The uplink is possible with 5 Watts on 2 meters, but the downlink is 9 dB worse to an omni antenna on UHF and requires tuning 10 to 20 KHz for Doppler. Currently there are no permanent IGates to bring the downlink into the global APRS system, but it is hoped volunteers will surface with permanent satgates. So initally, do NOT expect to see yourself on FINDU.COM. Enjoy ham radio, Make a contact instead!

Experimental testing shows that an APRS HT with a 19.5" whip can get a lucky shot into this satellite (but not when there is congestion on the uplink). With a handheld beam, it should be no problem for an HT, and the beam is needed on reception anyway. Fifty Watt mobiles should have no problem using a stock mobile whip. Due to the absence of APRS signals to date, we do not have good statistics on reception in a mobile yet...

Operating on a 9600 baud FULL DUPLEX APRS satellite is MUCH different than ARISS, or any of the other 1200 baud APRS PCSATS. Because the turn-around is so fast, you cannot see your own digipeated packets on the same radio (usually)... Please read and understand this entire bulletin before attempting to operate.

The easiest way to get on GO-32 with 9600 baud APRS is to use a Kenwood D7, D700 or D710 radio. These radios since 1998 have been satellite 9600 baud ready, just waiting on a satellite!.

Read these notes on how to operate GO-32 with a D7 or D700:

Set APRS Baudrate to 9600 baud.
Set A band to uplink on 145.93
Set B band to receive 435.225 +/- 10 KHz
Set Path to be via 4XTECH
Set MYCALL to a unique SSID
Set TX method to AUTO
Set TX RATE 1 min for HT. 2 min for D700
Put something useful in your STATUS text maybe describing your setup:
"50W mobile, 1/4 wave, 2m rate" or "5W HT, long whip, 1m rate"

Save in a PM for use anytime you are outside of the terrestrial APRS network.

SATELLITE OPERATING NOTES:

The GO32 uplinks and downlinks are for the PACSAT store and forward system and users. APRS use is on a secondary basis and should not be operated unattended. If you see that the BBS PBLIST is full of other users, do not enable your APRS since the uplink will be busy. Currently the PBLIST is not in APRS format so you cannot see it unless you are running normal packet mode.

On the D700 you can press PMON on the front panel and see these packets... but they FLY by...

ACCESS TIMES: GO-32 is sun synchronous and so it comes over everywhere three times between about 8 AM to Noon and again between 8 PM to midnight local sun time. During these two windows at least one pass each will be an overhead pass which might also work for an HT. The other passes will be lower to the East or West and will work fine for a 50W mobile.

WHAT YOU HEAR: 9600 baud sounds almost exactly like open squelch, though the tuned ear can soon distinguish the difference. Before the pass, set your squelch normally to quiet the speaker. When you hear the satellite, the squelch will open and you may see up to 3 bars on your S meter. Tune to the "best sounding" noise.

DOPPLER: Depending on how low to the horizon you can see, the satelite approaches 10 KHz high at 435.235 MHz... But it is maybe 3000 km away. As it gets higher, and 6 dB closer, it will be on 435.230 MHz, passing through 435.225 published center frequency at the middle point, and then drop down through 435.220 and ending at 435.215.

But since it is 6 to 10 dB closer (and stronger) towards the center of the pass (800 km overhead), the mobile antenna is probably only going to hear the middle 435.230, .225, .220 portion easily. So I would start my receiption at 435.230...

UPLINK CHANNELS: GO-32 allows two APRS uplinks. One is exclusive to D7/D700 tactical position reporting and the other exclusive to messaging. This is in hardware, not policy...

1) All APRS messaging (or fixed station non-Mic-E positions) must use the 145.85 uplink where GO32 only digipeats APRS packets with TOCALLs that begin with the usual "APxxxx". (Even the D7 and D700 use "APKxxx" for messages.)

2) All APRS Mic-E position uplinks (D7, D700 and D710s) must be on 145.93 MHz and they must have the position comment set to "Committed, Special or PRIORITY"... With those comment settings then the TOCALL first LATITUDE digit will be 1,2,3,4,5,6,7 and only these will be

accepted by GO32 for digipeating from 145.93.

DATA CARRIER DETECT: The D700 and non(g) model D7's will NOT TX if they are hearing the downlink at the same time due to CARRIER DETECT. The D7(g) model has DCD IGNORE that *will* let it TX anyway. So use separate rigs for TX and for RX if you want to see yourself.

Otherwise stick to the receommended TX rates and know that you are getting in if you stick to the protocol. Sticking to the recommended rates also keeps channel loading low, so that everyone gets in with less congestion.

PERMANENT SATGATES: Here is a great place to use your D7 HT when you are not using it otherwise. Simply connect it to a 19" whip over a ground plane and to your APRS IGate system. The antenna does not even need to be high, since it cannot hear, nor will it be on frequency for low packets near the horizon 3000 km away. Set it to 9600 baud RX and tune to 435.230 (which is 5 KHz high). This Doppler setting will match the stronger signals.

This 19.5" whip (3/4 wave on 435) does not need to see below 25 degrees, since its max gain (almost 7 dB) is between 30 to 70 degrees anwyay. This also protects your HT from lightning, since it can be low, below all of your other antnenas. Yes, your station will only see about 30% of all possible packets and only on the best two passes per day, but combined with dozens of other such unattended SATgates, all packets should be heard somewhere by someone and injected into the APRS Internet system.

Bob Bruinga, WB4APR, reports that he hopes to have an APRS-via-GO32 web page up in a few weeks.

Additional information about GO-32 can be found on the AMSAT web site at:
http://www.amsat.org/amsat-new/satellites/satInfo.php?satID=14&retURL=/satellites/status.php

Good luck!

[ANS thanks Bob, WB4APR, for the above information]

AO-51 Sputnik 50th Anniversary Special Event

AMSAT News Service Bulletin 266.04
From AMSAT HQ SILVER SPRING, MD.
September 23, 2007
To All RADIO AMATEURS
BID: $ANS-266.04

AMSAT-NA will mark the 50th anniversary of the launch of Sputnik with a special event on AO-51. AO-51 will rebroadcast original Sputnik telemetry and a congratulatory message to mark the event during passes over North America on the evening of Wednesday, October 3rd in North America, which is early October 4th UTC. At this time, only the passes over North America will be able to carry the special event. Please watch ANS and the amsat-bb mailing list for further information as the date approaches.

[ANS thanks Drew, KO4MA, for the above information]

ARISS Status - 17 September 2007

AMSAT News Service Bulletin 266.06
From AMSAT HQ SILVER SPRING, MD.
September 23, 2007
To All RADIO AMATEURS
BID: $ANS-266.06

1. ARISS Contact with M. L. King Academy Successful

On Wednesday, September 12, students attending M. L. King Academy (formerly Alexander Macomb Academy) in Mount Clemens, Michigan experienced an Amateur Radio on the International Space Station (ARISS) contact. Clay Anderson, KD5PLA answered 25 questions put to him by ten students. A crowd of approximately 350 gathered to watch the contact with several television stations and newspapers in attendance to report on the event. The school board director was also present and is now encouraging other schools to submit applications to ARISS. The audio from this contact was fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers. It received 33 connections, including 6 repeater nodes, from 9 countries. Among those listening were China, Trinidad Tobago, Uruguay and Thailand. To view the Macomb Daily article covering the event, see:
http://www.macombdaily.com/stories/091307/loc_students001.shtml

2. Successful ARISS Contact with Westbrook Intermediate

Students from Westbrook Intermediate School in Clear Creek, Texas took part in an Amateur Radio on the International Space Station (ARISS) contact on Friday, September 14. The contact was made possible with the assistance of telebridge station WH6PN in Hawaii. Twenty-four students asked one question each of Clay Anderson, KD5PLA. The audio from this event was fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) servers, receiving 28 connections from the U.S., Australia, Thailand and England, including 4 repeater nodes.

3. Upcoming School Contacts

An Amateur Radio on the International Space Station (ARISS) contact has been planned for Art and Pat Goforth Elementary School in League City, Texas on Friday, September 28 at 16:04 UTC via the telebridge station WH6PN in Hawaii. The school has a student body of which 25% of the children come from economically disadvantaged families and 12% receive special education. This event is a crew pick of Clay Anderson, KD5PLA.

The Smithsonian National Air and Space Museum in Washington, D.C. has been scheduled for an Amateur Radio on the International Space Station (ARISS) contact on Saturday, September 29 as part of its Family Day, "Commemorating 50 Years in Space." It will take place at 16:28 UTC via the telebridge station WH6PN in Hawaii The overall theme of the day will be to celebrate at least one major event and object in the Museum's collection for each decade of the space age. This event will focus on the ISS and the Shuttle program, and will acknowledge its sponsor, Charles Simonyi, who also participated in ARISS contacts with students while on the ISS. Visitors will be encouraged to participate in hands on activities during their time at the museum. Approximately 15,000 - 20,000 visitors are expected to attend throughout the day. The event will be promoted on the National Air and Space Museum's website, (http://www.nasm.si.edu/events/eventDetail.cfm?eventID=664) advertised by e-flyer to a variety of lists, and have newspaper ads in the Express (a daily tabloid of the Washington Post with a daily circulation of 286,000) and The City Paper, an alternate newsweekly, with a weekly subscription of 85,000.) The audio for this event will be fed into the EchoLink AMSAT (101 377) and JK1ZRW (277 208) Conference Room servers and into the IRLP Discovery Reflector 9010.

4. Scouts Participate in SuitSat-2 Project

On Saturday, September 15, approximately 58 boys, ages 6-18, from cub scout packs 983, 977, 778, 997, troop 993 and ham radio explorer post 599 in Maricopa, Arizona met to assemble two non-flight safety boxes for SuitSat-2. The scouts also drew pictures to be included on the SuitSat-2 DVD. Afterwards, the older boys were taught how to solder and lace cables. Photos from the explorer scouts may be found on this site: http://www.briansnapped.com/content/pics/SuitSat_2007/

5. ISS Radio Running Packet Operations

On Tuesday, September 11, the Kenwood radio was turned on and configured to run Packet operations. The Amateur Radio community world wide has been very pleased to have this capability restored.

6. Astronaut Training Status

On Wednesday, September 12, astronaut Koichi Wakata, KC5ZTA, participated in a simulated amateur radio school contact. Wakata is slated to fly on the shuttle STS-126 mission.

[ANS thanks Carol, KB3LKI, for the above information]

I was monitoring the WEFAX frequency last week and heard a male with what sounded like a Russian accent saying "Hello people of earth" on 137.500 MHz.

Anyone with an idea who it might be?

You should check the time of the ISS overflight relative to your QTH
relative to your reception. The ISS and the supply ships use VHF NBFM
30 KHz deviation downlinks normally on 143.625 MHz. 137.500 does not
ring a bell to me, but might be within the capability of their radios.

There difference between IR communication and RF communication is that while both can be wireless, the former can only be used for point to point communication while the latter doesn�t have that restriction.

Think about it.

Using a remote control for your TV. If your remote is IR you must aim the remote at the TV in order to make the changes you want [such as changing the channel or turning the TV on/off]. If the remote is RF, then you make those desired changes to the TV regardless of what direction you point the remote at -- you even control the TV from a different room provided that are no metals blocking the radio signals between the TV and the RF remote.

Using the above definition, what is the highest-frequency of electromagnetic spectrum that is considered �radio� and not IR?

Equally interesting -- what is the highest-frequency of radio that is not opaque to the earth�s atmosphere?

Thanks,

Radium

I think that's a gross oversimplification, an attempt to make
black-and-white a question that encompasses shades of grey.

> Using a remote control for your TV. If your remote is IR you must aim

Radio/microwaves penetrate more substances than IR, but they're no more
or less directed. Substitute a radio-opaque obstacle (e.g. a Faraday
cage) for the wall or body that blocks your IR remote, and the situation
is pretty well the same. Have you never heard a car radio lose its
signal when the vehicle passes under a reinforced-concrete structure?

Take your remote out of its casing and I bet the IR emission becomes
nearly omnidirectional ... OTOH masers emit coherent beams of RF energy.

> There difference between IR communication and RF communication is that
> while both can be wireless, the former can only be used for point to
> point communication while the latter doesn?t have that restriction.

Babbling nonsense.

The directivity of RF and light sources is determined by the emitting
structure, the antenna if you will.

RF at low megahertz can be "point to point" with a sufficiently
directive antenna and light can be omnidirectional.

Ever seen a light bulb or candle?

> Think about it.

I suggest you do.

<snip remaining nonsense>

You are trying to educate a troll.
Trust me, its better to leave them under a bridge.
Look at the list of groups, and google for his name.

SILVER SPRING, MD, September 24, 2007
TO ALL RADIO AMATEURS
BID: $ANS-267.S1

VO-52 HAMSAT
Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon
that is
active. Each transponder has a different beacon.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10

minute timer.

AMSAT NEWS SERVICE BULLETIN 267.S4 FROM AMSAT HQ
SILVER SPRING, MD, September 24, 2007
TO ALL RADIO AMATEURS
BID: $ANS-267.S4

THE FOLLOWING SATELLITES ARE NOT IN ORBIT BUT ARE PROPOSED FOR LAUNCH AT THIS TIME:

Phase 5a Mars Mission
Catalog Number:
Proposed Launch Date: 2009 or 2011

Status: Design Phase

For the latest project status update please visit the AMSAT-DL P5-A web page:
http://ticket-to-mars.org
[01222007]
=====
PHASE 3E AO-??
Catalog number:
Proposed Launch Date: Late 2007

Status: Under Construction

For the latest project status update please visit the AMSAT-DL P3-E web page:
http://www.amsat-dl.org/p3e/
[01222007]
=====
Eagle AO-??
Catalog Number:
Proposed Launch Date: Early/Mid 2009

Status: Design Phase

For the latest project status updates please visit the AMSAT-NA webpage:

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

AMSAT NEWS SERVICE
ANS-273

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

******************* AMSAT 2007 Space Symposium *************************

The Wireless Association of South Hills Amateur Radio Club announces the 2007 AMSAT Space Symposium will be held at the Pittsburgh Airport Marriott Hotel on Friday, October 26 through Sunday, October 28, 2007. The AMSAT web team has posted informational pages on the AMSAT web site. You can find the announcement with many links at:
http://www.amsat.org/amsat-new/symposium/2007/index.php

In this edition:
* Annual International Amateur Radio Satellite Forum at Symposium
* AMSAT Awards
* Students to Build Satellite Antennas at AMSAT Symposium
* Sputnik 50th Anniversary Special Events Planned for October 4
* Satellite Shorts From All Over

SB SAT @ AMSAT $ANS-273.01
Annual International Amateur Radio Satellite Forum at Symposium

AMSAT News Service Bulletin 273.01
From AMSAT HQ SILVER SPRING, MD.
September 30, 2007
To All RADIO AMATEURS
BID: $ANS-273.01

The International Amateur Radio Union (IARU) Administrative Council holds its Amateur Satellite Forum on alternating years between the AMSAT-NA Symposium and the AMSAT-UK Colloquium. This year is the turn to hold this forum in the USA at the Symposium on Sunday, October 28.

Three speakers are currently scheduled to address the forum. There is also time planned for a panel discussion with the IARU delegates. The forum will be open to everyone attending the Symposium.

[ANS thanks the Symposium Committee for the above information]

SB SAT @ AMSAT $ANS-273.03
Students to Build Satellite Antennas at AMSAT Symposium

AMSAT News Service Bulletin 273.03
  From AMSAT HQ SILVER SPRING, MD.
September 30, 2007
To All RADIO AMATEURS
BID: $ANS-273.03

Richard Crow, N2SPI will conduct a workshop which will mentor students to build satellite antennas for 145 and 435 MHz. They will be able to use their antenna to receive signals from AO-51, SO-50, and AO-27. The workshops are slated to take place on Friday evening and Saturday morning at the Symposium.

[ANS thanks the Symposium Committee for the above information]

SB SAT @ AMSAT $ANS-273.04
Sputnik 50th Anniversary Special Events Planned for October 4

AMSAT News Service Bulletin 266.04
  From AMSAT HQ SILVER SPRING, MD.
September 30, 2007
To All RADIO AMATEURS
BID: $ANS-273.04

AMSAT-NA will mark the 50th anniversary of the launch of Sputnik with a special event on AO-51. AO-51 will rebroadcast original Sputnik telemetry and a congratulatory message to mark the event during passes over North America on the evening of Wednesday, October 3rd in North America, which is early October 4th UTC. At this time, only the passes over North America will be able to carry the special event. Please watch ANS and the amsat-bb mailing list for further information as the date approaches.

Robert, G8ATE and John, G7HIA will be using the special call sign GB50SO starting on the 4th October for one month to celebrate the 50th Anniversary of the launch of the first earth orbiting satellite SPUTNIK ONE on that date in 1957. All of the available analogue satellites will be used as time permits. A special QSL card will be available after the event.

[ANS thanks Drew, KO4MA, and Robert, G8ATE for the above information]

To All RADIO AMATEURS
BID: $ANS-273.05

+ Make your room reservations for the 2007 AMSAT Space Symposium in Pittsburgh as soon as possible. Any rooms that have not been reserved by October 8th will be released to the hotel. For the reservation code, go to the AMSAT website and click on the left hand side - AMSAT Symposium. If you have any problems making a reservation, please call Martha in the ASMAST office at (301-589-6062).

+ Drew, KO4MA, AMSAT VP Operations reminds AO-51 users that its time to again submit your mode requests for the month of October. Please submit them to ao51-modes@amsat.org as soon as possible.

+ Norm Fusaro, W3IZ, ARRL Assistant Manager, Membership & Volunteer Programs Department wrote this week, "After review, ARRL will permit contacts through the ISS (Earth - ISS - Earth) to be counted towards satellite endorsement for WAS and DXCC. This applies to contacts made via the onboard repeater equipment provided that the equipment does not hold and re-transmit information. Contacts with the ISS do not receive any award credit. Further information will be available on the LoTW website." See: http://www.arrl.org/lotw/

+ Masa, JN1GKZ has an FO-29 Operation Schedule page at:
http://www.ne.jp/asahi/m-arai/gkz/satinfo/fo29e.htm

[ANS thanks everyone for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the

President's Club. Members of the President's Club, as sustaining donors
to AMSAT Project Funds, will be eligible to receive additional benefits.
Application forms are available from the AMSAT Office.

Perhaps it was ET :-)
Well, besides a couple of ~143-148MHz freq's I've also marked
121.750 and 130.167 as MIR/ISS frequencies, I guess their
radios cover several vhf bands, however I think the amateur radio
on ISS is a dedicated 2m/70cm bander....
But transmitting on the 137-138MHz wefax band?
Never heard of before...
//Greg.

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear

U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

Hi:

Let's say I am in a space station which has a 2 GHz DX AM analog receiver that receives the magnetic fields [while ignoring the electric fields] of extremely weak 2 GHz AM analog carrier signals. In addition, this receiver is so sensitive and powerful that it can clearly pick up AM carrier waves as weak as 10-to-the-power-NEGATIVE-10,000 watt-per-meter-squared. This receiver also has a robust signal processor that can eliminate clipped-waveforms [such as square waves], spikes, clicks, pops, hiss, and random noise even at those trivial wattage levels. After eliminating those unwanted signals, the carrier wave is amplified. This receiver has an astronomically-powerful amplifier which amplifies those extremely-soft carrier waves until the resulting modulation signals will be just loud enough for the human ear to coherently detect. Following this amplification, the carrier waves are demodulated to modulation waves -- the stuff we "hear" -- and then sent to loudspeaker so those onboard can hear those sounds.

Equally important, the 2-GHz receiver is pointed away from the earth to assist in preventing the pickup of signals generated from Earth.

If I am on this spaceship, what will I most likely hear on the radio?

Thanks,

Radium

Depends on where you are. Electromagnetic emissions from the Earth
greatly increased after WW II with the advent of widespread television
broadcasting. This resulted in a veritable step function in the sphere
of energy expanding as it races away from the Earth at the speed of
light. On the very leading edge of that sphere of energy are the Howdy
Doody Show and the McCarthy hearings. This explains why no aliens have
ever visited the Earth. But it sounds like programming that's right up
your alley. If you can find that sweet spot in space, sit back and enjoy.

There is no carrier, it was one of those signals you just eliminated.

> There is no carrier,

Yes there is. Why do you say there isn't? Certain waveforms in the carrier wave that would cause the modulator signal to contain clipped-waveforms [such as square waves], spikes, clicks, pops, hiss, and random noise are removed. However, the remainder of the carrier-wave remains unscathed.

> it was one of those signals you just
> eliminated.

How so?

> > If I am on this spaceship, what will
> > I most likely hear on the radio?

> Stop trying to troll, you are too stupid to pull it off.

I don't troll or spam. I am asking this question because -- unlikely [if not impossible] as my 2-GHz-in-outer-space scenario is -- I am still interested in it.

Now please please please answer my question. What would I hear?

I chose 2 GHz because it is in the UHF band. UHFs tend to be best for extremely long distance reception. Of the radio waves emitted by objects trillions of miles -- or more -- away, UHF is usually the most receivable.

AMSAT NEWS SERVICE
ANS-280

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

******************* AMSAT 2007 Space Symposium *************************

The Wireless Association of South Hills Amateur Radio Club announces the 2007 AMSAT Space Symposium will be held at the Pittsburgh Airport Marriott Hotel on Friday, October 26 through Sunday, October 28, 2007. The AMSAT web team has posted informational pages on the AMSAT web site. You can find the announcement with many links at:
http://www.amsat.org/amsat-new/symposium/2007/index.php

In this edition:

* 2007 AMSAT Space Symposium Features and Events Announced
* Sputnik-1 50th Anniversary Special Event Via AO-51
* AO-51 Includes Special L/U BBS and Telemetry Experiment
* Three Packet Satellites Available on 145.825 MHz
* F8ZS Silent Key
* ARISS Status Report for the week of October 1, 2007

SB SAT @ AMSAT $ANS-280.01
2007 AMSAT Space Symposium Features and Events Announced

AMSAT News Service Bulletin 280.01
>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.01

Make plans now to attend the AMSAT-NA 2007 Space Symposium! Amateur Radio Satellite Operators will find the AMSAT Space Symposium to be an exciting and rewarding event-filled weekend. Here are some of the features and events to look forward to:

+ AMSAT-NA Annual General Meeting
+ AMSAT-NA Board of Directors Meeting
+ AMSAT Directors and Officers will be available to answer your questions
+ AMSAT Annual Banquet with Keynote Speaker
+ Technical forums focusing on the latest planning and technology of

Amateur Radio in Space

- All Papers and Presentations will be published in the Symposium Proceedings for all registered attendees
- Technical demonstrations of prototype flight hardware and software for AMSAT Eagle - the next generation in space
- Discussions and demonstrations of SuitSat-2, ARISS, solid state RF power amp, antennas, AO-51
- Update on AMSAT's new Maryland Lab
- AMSAT Area Coordinators' Breakfast and Meeting on Sunday Morning
- IARU Satellite Forum
- President's Club Reception
- Satellite Beginner's Session: Introduction to Satellites
- An operating satellite station capable of working AO-7, FO-29, AO-27, SO-50, AO-51 and VO-52
- N2SPI satellite antenna demonstrations and antenna construction with students
- Meet and greet old friends and make new friends
- Enjoy eyeball QSOs with satellite designers, builders, and operators from around the world
- Sunday afternoon tour to the WPXI-DT Digital Studio

The AMSAT Software Defined Transponder Team is working toward having an operational VHF - UHF transponder available for the entire weekend. Eagle Project Team members will be available to answer your questions and provide demonstrations.

New to the Symposium this year is a selection of apparel that may be ordered. We have Symposium themed golf shirts, tee shirts, key rings ball caps. A percentage of these sales will go to Eagle.

For those people who would rather not register for the Meeting through the AMSAT store, you can register via phone by calling 301-589-6062.

[ANS thanks 2007 AMSAT Space Symposium Co-chairs Kevin N3HKQ, and Pat KC4WTT for the above information]

SB SAT @ AMSAT $ANS-280.02
Sputnik-1 50th Anniversary Special Event Via AO-51

AMSAT News Service Bulletin 280.02
>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.02

This week AMSAT hosted a Special Event on Wednesday night when AO-51 was used to retransmit the original Sputnik-1 telemetry in commemoration of Sputnik's 50th birthday.

AMSAT-NA Vice President of Operations, Drew KO4MA, summarized the event, "I just wanted to thank everyone for what looks like a well received special event. Special thanks to our participating uplink stations:

- VE3NPC, Clare
- N8BBQ, Ed
- KD8CAO, Doug
- WA6FWF, Kevin
- K7WIN, Jeff
- G1OCN, Dave
- IW4DTU, Fer
- Our chief AO-51 Command Op, WA4SXM, Gould,
- and Drew's wife Merete for compiling and equalizing the audio."

Send a report to Kevin, WA6FWF at his callbook address with a 9x12 SASE and you will receive a nice QSL certificate.

Comments were received from many stations after the Sputnik passes:

"Great idea and very nice delivery! Enjoyed it very much on the the first active pass of AO-51 tonight." - VE4NSA

"Wonderfully loud and clear in DM-13 Southern California.
MANY THANKS." - K6LCS

"Clear copy of AO-51 message and Sputnik transmission at 0001 UTC from my balcony with a three element hand held UHF antenna." - VE3VIG

"It was great! My 8 year-old and 5 year-old boys listened with awe in their eyes as the bird came into view. I've been trying to spark their interest for years, and this may have done the trick!" - N8AU

"Tonight was truly fantastic and historic. My thanks to all for the hard work they undoubtedly put into this night." - KB2HSH

"I would like to add my thanks for a superb event. I copied most of the last two passes over NA on my IC R-20 and recorded the audio. This will be used along with Visual Sightings of the ISS and construction of 1/4 scale models of Sputnik (6" Styrofoam Ball and Wood Dowels) for a Sputnik 50th Birthday Party with 39 Elementary School Kids." - W5IU

"Midway into our Ottawa Amateur Radio Club executive meeting, we all took a break out to the street to have a listen to the rebroadcast of Sputnik-1 with an arrow and HT. Present were VE3TLY, VA3PAX, VE3FFK, VE3ZTU, VE3IGJ and VA3DB." - VA3DB

[ANS thanks Drew, KO4MA and everyone else for the above information]

SB SAT @ AMSAT $ANS-280.04
Three Packet Satellites Available on 145.825 MHz

AMSAT News Service Bulletin 280.04
>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.04

Bob, WB4APR reminds satellite packet operators of the opportunity of up to 25 passes per day for 2-way keyboard communications with simple packet equipment on 145.825 MHz uplink and downlink.

The 145.825 MHz frequency includes ARISS aboard the ISS, ANDE and PCSAT-1 operating at 1200 baud. Recently GO-32 became available on 435.225 MHz for 9600 baud communications

APRS Igate Packet gateway stations copying these three packet digipeater satellites on 145.825 feed to the two web pages:

http://www.ariss.net
http://pcsat.aprs.org

For additional information regarding the GO-32 435.225 MHz 9600 baud operation see: http://www.ew.usna.edu/~bruninga/GO32-ops.html

[ANS thanks Bob, WB4APR for the above information]

SB SAT @ AMSAT $ANS-280.05
F8ZS Silent Key

AMSAT News Service Bulletin 280.05
>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.05

It is with sadness that I must inform our AMSAT colleagues, of the passing away of Jean Edmond Gruau F8ZS, President of Radio Amateur Club de l'Espace and Honorary President of AMSAT-France.

Jean was the father of ARSENE radioamateur mini satellite, launched in May, 1993.

He retired a few years ago from his position as Inspecteur General of the french space agency (CNES) that he contributed to create as well as the European Space Center in Kourou, french Guyana.

Jean F8ZS was a very kind man with always a lot of good stories to tell to his visiting friends about his large experience in radio transmissions and preventive failure security in space industry.

73 de Bernard, F6BVP
AMSAT France founding President

[ANS thanks Bernard, F6BVP for the above information]

SB SAT @ AMSAT $ANS-280.06
ARISS Status Report for the week of October 1, 2007

AMSAT News Service Bulletin 280.06
>From AMSAT HQ SILVER SPRING, MD.
October 7, 2007
To All RADIO AMATEURS
BID: $ANS-280.06

1. Heidelberg University Contact Successful

On Monday, September 25, students from Heidelberg University for Applied Sciences in Germany experienced an ARISS contact via the telebridge station WH6PN in Hawaii. Clay Anderson, KD5PLA, answered one question from each of twenty students, as 200 youth gathered in the radio shack.

2. ARISS Contact Achieved with Texas School

An ARISS contact between students at the Art and Pat Goforth Elementary School in League City, Texas and Clay Anderson, KD5PLA, aboard the ISS took place on Wednesday, September 26 via the telebridge station WH6PN in Hawaii. Approximately 50 students, teachers and parents gathered in the school�s amphitheater as Anderson fielded 25 questions put to him by 13 students, the first question asked by his daughter.

3. Smithsonian � ARISS Contact

On Saturday, September 29, youth visiting the Smithsonian National Air and Space Museum in Washington, D.C. participated in an ARISS contact as part of its Family Day, �Commemorating 50 Years in Space.�
The telebridge station WH6PN in Hawaii assisted in the contact. Gathered in the Space Race gallery, five children had 25 questions answered by Clay Anderson, KD5PLA. The Radio Amateur Satellite Corporation (AMSAT) and ARISS booths were set up near the main entrance and generated much interest. Many local amateur radio operators attended to help out. Approximately 15,000 - 20,000 visitors were expected to attend the event throughout the day.

4. School Contacts

An ARISS contact was held for the Town of Anamizu ARISS School Contact Executive Committee in Anamizu-town, Housu-gun Ishikawa, Japan on Saturday, October 6. Six hundred students from seven elementary and junior high schools will participate in this event. Conversational English, computers, amateur radio and the International Space Station are the subject matters studied in preparation for this event. Because this wass the first ARISS contact within the prefecture of Ishikawa, all preparations leading up to and including the contact were covered in the media.

Prairielands Council, Boy Scouts of America in Champaign, Illinois held an ARISS contact on Saturday, October 6 via the telebridge station VK4KHZ in Australia. Prairielands Council is made up of three districts supporting Boy Scouts and Cub Scouts in Central Eastern Illinois and Central Western Indiana. The Prairielands Council has created a new event, the Space Jamboree. Scouts attending will work on the Space Exploration Merit Badge requirements which include designing Mars missions and constructing Moon base models. They will design and launch water rockets and become familiar with robotic technology. Segway of Chicago will assist in robotics education and the FIRST program regional director will bring robots to this first annual Space Jamboree. The local rocket club will be providing rocket launches throughout the event, two during the outdoor viewing of the movie "October Sky." The youth are also expected to complete many of the Radio Merit Badge requirements.

An ARISS contact has been scheduled for Isummasaqvik School in Quaqtaq, Quebec, Canada on Wednesday, October 10 at 18:31 UTC. The telebridge station ON4ISS in Belgium will assist in the contact. Approximately 100 students, from Kindergarten through high school levels, attend Isummasaqvik School. The school plans to hold a contest to create a mission patch to be worn on T-shirts by everyone participating in the contact. All classes will participate in space related projects which will be displayed in the school gym on the day of the contact.

5. ARISS International Meeting Held

An ARISS teleconference was held on Tuesday, September 25. Topics of discussion included a new telebridge station, status of the Columbus Module antennas and SuitSat-2. The minutes have been posted to the ARISS web site. See: http://www.rac.ca/ariss/arisstel2007-09-25.htm

6. Astronaut Training Status

Astronaut Michael Barratt, KD5MIJ, participated in a simulated ARISS school contact during a training session held the last week of September.
Barratt is the backup for Michael Fincke on Expedition 18.

[ANS thanks Carol, KB3LKI for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

73,
This week's ANS Editor,
JoAnne Maenpaa, K9JKM

WRONG. it is therefore not an EM wave, and your receiver will not pick it
up.

> of extremely weak 2 GHz AM analog carrier signals. In addition,
> this receiver is so sensitive and powerful that it can clearly pick up
> AM carrier waves as weak as 10-to-the-power-NEGATIVE-10,000
> watt-per-meter-squared.

Powerful is the wrong word.

What type of "selectiveity" does it have?? (moron)

> This receiver also has a robust signal processor
> that can eliminate clipped-waveforms [such as square waves], spikes,
> clicks, pops, hiss, and random noise

It can not eliminate random noise, idiot stufinagle.

>even at those trivial wattage
> levels. After eliminating those unwanted signals,

snip rest of trivial drivialings

An EM wave has an electric component and a magnetic component. The
antenna determines whether you are interacting with the electric portion
of the field or the magnetic. A shielded loop will receive the magnetic
portion of the field and ignore the electric if properly constructed.

Then what is the correct word? "Sensitivity"?

> What type of "selectiveity" does it have??

What do you mean by "selectivity"?

>> This receiver also has a robust signal processor

How about in the mysterious too-good-to-be-true situation that it can?
Then what would happen?

I used to often play my Nintendo when it was connected to channel 3.
However, I was change the TV channel to 4. I could see the video of the
game but it was fuzzy and covered in grains. The music of the game was
absent, and instead was filled with frightening-yet-enjoyable tones
[sounding like a buzzer, lawn mower, or electric shaver] along with a
faint audio of what was being discussed on the channel 4 news.

Is there a good chance I would hear something similar on my 2 GHz AM DX
receiver in space?

Also, whenever there is drill or an actually emergency, the Emergency
Alert System [EAS] plays their music. First they play the boring
low-pitch square-wave tones. Then they play the high-pitched,
terrifying, psychedelic sine-wave tones.

Is there a good chance I would hear something similar to the second
higher-pitched set of EAS tones on my 2 GHz AM DX receiver in space?

Let me put you out of your misery,I do not know how old you are but
you unwittingly introduce a big no-no by postulating EM waves in space
and that implies a medium.

This is fine,they were faced with a dilemma in the mid19th century
inherited from Newton where they could live happily with the the Sun
influencing the Earth without a medium but could not conceive the Sun
illuminating the Earth without one.Check the top right column of the
following article from 1843 to affirm this -

http://www.bodley.ox.ac.uk/cgi-bin/ilej/image1.pl?
item=page&seq=9&size=1&id=bm.1843.10.x.54.336.x.425

50 years later they dumped a medium on Newton anyway as 'absolute
space' and then conveniently rejected it all over again and then you
have 100 years of relativistic junk,some hopeless cases still think it
is an achievement but they are the ones who jump in here and try to
make you look like an idiot even though it may be a fair question.

The sound of absolute zero, which sounds a lot like the sound
of absolute infinity, except that morons at Viacom pick
up the tab, rather than morons at AT&T.

Because a sine wave is a sine and you cannot
distiguish one from another. There is no
criterion that says anything is a "carrier"
and not just part of the background hiss.

> > it was one of those signals you just
> > eliminated.
>
> How so?

If you use a band pass filter at some frequency
that you guess could be a carrier followed by an

```
envelope detector, you get hiss. To eliminate
the hiss, you have to eliminate all other
frequencies so all you are left with is CW and
the envelope detector then gives a DC output.

Several people have answered you already, the
answer is silence.

George

They were only confused about the nature of the "ether".
Now we know that empty space is indeed not empty and
is something (as opposed to absolute nothing) that some
physicists describe as a "quantum soup" outside of which
EM waves cannot propagate.

>
> They were only confused about the nature of the "ether".

Again,the guys in the mid 19th century were inheriting a dilemma Newton created when he rejected a medium.If you really have to believe the cobblers of the last century where Albert rejects and aether by attaching it to Newton's 'absolute space' then be my guest,it is an incredible work of fiction but no more .

"The fictitious matter which is imagined as filling the whole of space is of no use for explaining the phenomena of Nature, since the motions of the planets and comets are better explained without it, by means of gravity; and it has never yet been explained how this matter accounts for gravity. The only thing which matter of this sort could do, would be to interfere with and slow down the motions of those large celestial bodies, and weaken the order of Nature; and in the microscopic pores of bodies, it would put a stop to the vibrations of their parts which their heat and all their active force consists in. Further, since matter of this sort is not only completely useless, but would actually interfere with the operations of Nature, and weaken them, there is no solid reason why we should believe in any

such matter at all. Consequently, it is to be utterly rejected."
Optics 1704 Newton

So Cecil,if you read the article again and especially the top right column you will see the distress of people who know they are stuck in a rut but cannot find a way out of it.In the end they dumped aether on Isaac as 'absolute space' and so began the relativistic junk. -

" In order to be able to look upon the rotation of the system, at least formally, as something real, Newton objectivises space. Since he classes his absolute space together with real things, for him rotation relative to an absolute space is also something real. Newton might no less well have called his absolute space ``Ether''; "Albert

Unless you have a severe reading disability,you will probably notice Newton using explict terms like "utterly rejected" in regard to aether hence the honest of the guys in the mid 19th century.

> Now we know that empty space is indeed not empty and
> is something (as opposed to absolute nothing) that some
> physicists describe as a "quantum soup" outside of which

> --
> 73, Cecil http://www.w5dxp.com

Quantum soup no less !, created by the witches of Macbeth no doubt -

Round about the cauldron go;
In the poison'd entrails throw.
Toad, that under cold stone
Days and nights has thirty-one
Swelter'd venom sleeping got,
Boil thou first i' the charmed pot.
Double, double toil and trouble;
Fire burn, and cauldron bubble

The fiction Newton created is far more impressive than the one built by the guys in the early 20th century but the fiction of Newton has a very,very astrological slant and it began with the work of John Flamsteed.I would love to fill you in with the details but you appear content believing the guys in the mid 19th century were confused.They were not,they were desperate.

rec.radio.amateur.space:132 rec.radio.amateur.misc:1576

Hello,

This is an amateur balloon launch announcement that may interest North European amateur radio operators. The Finnish balloon project Ilmari will (finally) launch a balloon on August 11th, 2007, at approximately 06 UTC from Padasjoki (latitude N61° 21', longitude E025° 03', Maidenhead square KP21MI). That is today, within 5 hours or so of this posting, sorry for the late announcement. The flight is expected to last from 3 to 6 hours and touch down around 30 nm north-east from the launch site.

Ilmari is more than just a typical balloon, for example it carries a 23cm ATV transmitter and a 2m up/70cm down linear transponder (cw/ssb/digital), in addition to more typical 80m CW beacon and 70cm APRS transmitter. If Ilmari reaches its projected height of 25 kilometers, it should be workable from most parts of Finland, Sweden, Estonia, Latvia and north-west Russia. It maybe possible to receive Ilmari in northern parts of Lithuania and eastern parts of Norway. The balloon will use callsigns OH2SIX-11 and/or OH2SIX-12, they should be visible in the APRS-IS during the flight.

For more information and instructions on how and where (frequencies) to work Ilmari, have a look at
http://www.kolumbus.fi/michael.fletcher/ilmari.htm and
http://wiki.ham.fi/Ilmari-2007 for a kind of launch log.

Tapio

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.
```

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

AMSAT NEWS SERVICE
ANS-224

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

In this edition:
* 2007 AMSAT Space Symposium and Annual Meeting - Call for papers
* FO-29 Power Status
* AMSAT Awards
* 100th Anniversary of Scouts Celebrated with ARISS Contact

SB SAT @ AMSAT $ANS-224.01
2007 AMSAT Space Symposium and Annual Meeting - Call for papers

AMSAT News Service Bulletin 224.01
From AMSAT HQ SILVER SPRING, MD.
August 12, 2007
To All RADIO AMATEURS
BID: $ANS-224.01

This is the third call for papers for the 2007 AMSAT Space Symposium and Annual Meeting to be held October 25-28, 2007 in Pittsburgh, Pennsylvania. The September 1, 2007 deadline for submitting electronic versions of papers for inclusion in the printed symposium proceedings to Dan Schultz is rapidly approaching.

Proposals for papers, symposium presentations, and poster presentations are invited on any topic of interest to the amateur satellite program. An emphasis for this year is an educational outreach to middle and high school students. In particular, papers on the following topics are solicited:

Students & Education, ARISS, AO-51, P3E, Eagle and other satellite-related topics.

Papers should be sent to: Daniel Schultz N8FGV by e-mail to: n8fgv@amsat.org.

[ANS thanks Dan, N8FGV, for the above information]

SB SAT @ AMSAT $ANS-224.02
FO-29 Power Status

AMSAT News Service Bulletin 224.02
From AMSAT HQ SILVER SPRING, MD.
August 12, 2007
To All RADIO AMATEURS
BID: $ANS-224.02

The internal impedance of the battery in FO-29 (Fuji-3) is now rising due to the deterioration caused by almost 12 years in orbit. According to the telemetry data a 25 minute eclipse duration is estimated as a limit as for the analog battery system use. Because the eclipse length of FO-29 (Fuji-3) is currently about 30% or almost 32 minutes, the power supply of the relay with the battery cannot serve a period of the eclipse.

A malfunction also occurs in part of the electricity control system. The malfunction is the UVC which is an automatic function for electricity management. When the satellite is in the eclipse, and the light of the sun is not the solar battery, the transmitter is turned OFF by the UVC. It is designed so that later an analog system transmitter becomes ON automatically when the terminal voltages of the battery exceed a set value after the power is available from the solar battery. However, it appears likely that a malfunction occurs for this function, and the terminal voltage cannot turn on a transmitter even if it exceeds the set value unless commanded from the ground.

The length of eclipses for FO-29 (Fuji-3) will rise in future and rises to 34% in March 2008 and comes over a peak of the eclipse duration. When it goes over this peak, the eclipses will decrease slowly, and drop to 20% in August 2009. By February 2010 it is all sunshine with no eclipses for about 8 months. It seems that we can apply the analog system relay consecutively for this period.

[ANS thanks Mineo Wakita, JE9PEL, for the above information]

SB SAT @ AMSAT $ANS-224.04
100th Anniversary of Scouts Celebrated with ARISS Contact

AMSAT News Service Bulletin 224.04
From AMSAT HQ SILVER SPRING, MD.
August 12, 2007
To All RADIO AMATEURS
BID: $ANS-224.04

On Saturday, August 4, an Amateur Radio on the International Space Station (ARISS) contact took place between scouts attending the 21st World Scout Jamboree in Chelmsford, England and Clay Anderson, KD5PLA, aboard the ISS. Ten scouts were able to ask two questions each of the astronaut using the special event station, GB100J. Approximately 40,000 scouts from 200 countries attended the jamboree. Audio was broadcast on the jamboree FM radio station and was webcast on the radio station's website. The audio was also fed into the EchoLink JK1ZRW (277 208) server and received 50 connections from stations in12 countries including 6 repeaters nodes. Video and audio may be found on this site: http://www.g6lvb.com/GB100JISS.wmv

[ANS thanks Carol, KB3LKI, for the above information]

> How did it go?

It went quite nicely, upto about 31 km in height and even the payload was retrieved successfully 8 minutes after touchdown. The biggest problem were people who used way too much power to access the transponder, you could've worked it with less than one watt and 1/4 2m vertical just fine. There's some pictures and text available about this flight in English at http://wiki.ham.fi/Ilmari-2007a and http://ham.zmailer.org/oh2mqk/ilmari/2007a/

This report is organized into FIVE parts.
Part 1 (S1) - operational analog amateur satellites
Part 2 (S2) - operational digital amateur satellites
Part 3 (S3) - non - operational satellites
Part 4 (S4) - proposed satellites
Part 5 (S5) - deorbited/returned satellites

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)

* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

I have been searching for a QST article that detailed modifying a TV style rotator such that the readout was ad igital panel meter that was scaled for degrees.
Does anyone recall the article- year/month?

Tnx,
Dale W4OP

AMSAT NEWS SERVICE
ANS-231

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:

ans-editor@amsat.org

******************* AMSAT 2007 Space Symposium *************************

The Wireless Association of South Hills Amateur Radio Club announces the 2007 AMSAT Space Symposium will be held at the Pittsburgh Airport Marriott Hotel on Friday, October 26 through Sunday, October 28, 2007. The AMSAT web team has posted informational pages on the AMSAT web site. You can find the announcement with many links at:
http://www.amsat.org/amsat-new/symposium/2007/index.php

****

In this edition:
* 2007 AMSAT Space Symposium and Annual Meeting
* FO-29 Returns to Semi-Operational Status
* Symposium Station
* ARISS Status Report for the Week of August 13, 2007

SB SAT @ AMSAT $ANS-231.01
2007 AMSAT Space Symposium and Annual Meeting

AMSAT News Service Bulletin 231.01
  From AMSAT HQ SILVER SPRING, MD.
August 19, 2007
To All RADIO AMATEURS
BID: $ANS-231.01

The Annual AMSAT Symposium of October 26, 27 & 28 can now be accessed via the AMSAT Website. Make your reservations early and save. See all that is offered and make your plans now to attend.
The 2007 AMSAT Space Symposium registration form is online. Go to the AMSAT website and click on 2007 AMSAT Symposium (left hand side of page). That will link you to the Symposium site and registration.

BID: $ANS-231.02

FO-29 Returns to Semi-Operational Status

After experiencing problems with its battery and charging system FO-29 was turned off on May 4, 2007. The control station at JARL worked on failure analysis and battery reconditioning. The team has been successful in partially recovering the satellite and this past week reported, "FO-29 is semi-operational!"

Masa, JN1GKZ in Tokyo provided additional details, "The FO-29 battery is almost dead and the automatic recovery function does not work. This means transmitter will stop after eclipse and a wake up command by the JARL Command Staion is needed to start the satellite.

FO-29 users are requested to please keep their downlink signal weaker than the beacon. JARL posts daily FO-29 operating schedules via the amsat-bb mailing list. Telemetry reception reports are welcomed. Please send reports to lab@jarl.or.jp.

Mika, OH8MBN reports from Finland, "Great signal levels, the bird works just fine!! Thanks to guys at JARL command station for bringing this great satellite back alive!"

Bruce, VE9QRP said, "I can report that from my location on the east coast of Canada, it was audible well past the point when SatPC32 believed the bird was in eclipse. I believe I could hear the beacon down to LOS. Thank you for all the hard work you put into making FO-29 work again."

[ANS thanks Mineo, JE9PEL and Masa, JN1GKZ for the above information]

SB SAT @ AMSAT $ANS-231.03
Symposium Station

AMSAT News Service Bulletin 231.03
From AMSAT HQ SILVER SPRING, MD.
August 19, 2007
To All RADIO AMATEURS
BID: $ANS-231.03

One of the events that will take place at the 2007 AMSAT Space Symposium is an operating satellite ground station will be available for use and demonstration. This station will have the capability to automatically track satellites using 2-meter and 70-cm circular polarized antennas and a Yaesu FT-847 that is appropriately computer controlled. We would like to demonstrate communication with digital satellites like GO-32 and AO-51 using WISP but we need assistance. We would also like to have telemetry capture and analysis demonstrated. If any Pittsburgh area amateurs have the expertise to help us demonstrate satellite digital communication and telemetry capture please contact Kevin Smith, N3HKQ at n3hkq@amsat.org or call 412-953-4957. Any assistance is greatly appreciated.

73,
Kevin Smith, N3HKQ
2007 AMSAT Space Symposium Co-Chair

[ANS thanks Kevin, N3HKQ, for the above information]

To All RADIO AMATEURS
BID: $ANS-231.04

ARISS Status Report for the Week of August 13, 2007

1. ARISS Contact with New York Community Center

On Tuesday, August 7, an ARISS contact took place between the One Stop Richmond Hill Community Center in Queens, New York and Clay Anderson, KD5PLA, via the telebridge station WH6PN in Hawaii. Twelve students had 23 questions answered by the astronaut as a gathering of 50 people looked on. There was some press interest in the event and the center expects to receive local media coverage. Eleven stations connected to EchoLink from the USA and England, including 3 repeater nodes.

2. Upcoming School Contact

Nanjing No. 3 High School in Nanjing, Jiangsu, P.R. China has been scheduled for an ARISS contact on Sunday, August 26 at 10:44 UTC. To prepare for the contact, elective courses will be offered on amateur radio and contests will be held to determine the best essays and cartoons concerning ARISS. Other schools in the area will be invited to the event. The school has an active amateur radio club which was established in 1992 and has been a five time winner of the national youth amateur radio contest. Local hams and businesses will support the students with the contact. Extensive media coverage is expected from newspapers, television and radio stations and the internet.

An article by The People's Daily about the upcoming contact can be viewed on-line at:
http://www.southgatearc.org/news/august2007/iss_peoples_daily.htm

3. ARRL Article on Educator Astronaut

The American Radio Relay League (ARRL) ran a web story on Barbara Morgan, KD5VNP, and the STS-118 mission. Morgan plans to talk with school children in Idaho during her flight.
See: http://www.arrl.org/news/stories/2007/08/08/100/?nc=1

[ANS thanks Carol, KB3LKI, for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10 minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

After a successful maiden flight two weeks ago, there will be another
Ilmari balloon flight next weekend. The flight is scheduled for 06 UTC
on Sunday, September 2nd, 2007, from Sappee (KP21GJ).

Ilmari should be workable from many parts of north-eastern Europe, if it
goes as high up as the previous flight (30 km). Remember to keep your
ERP low, 1 watt is plenty for working Ilmari's 2m/70cm ssb/cw
transponder! APRS(-IS) callsigns will probably be OH2SIX-11 and/or -12.

Have a look at http://wiki.ham.fi/Ilmari-2007b for operating
instructions and http://www.kolumbus.fi/michael.fletcher/ilmari.htm for
pictures and information from the maiden flight.

Tapio

Special Satellite Operating Event on ANDE for August 28 + 30

AMSAT News Service Bulletin 238.01
>From AMSAT HQ SILVER SPRING, MD.
August 26, 2007
To All RADIO AMATEURS
BID: $ANS-238.01

The US Naval Academy Satellite Laboratory announced a special ANDE Operations Event for the Tuesday, August 28 and Thursday, August 30 morning passes over the US East Coast.

Bob, WB4APR described the operation plans, "On Tuesday, Naval Academy stuents will operate ANDE to gather statistics on the success rate of the APRS mission. We invite participation, attended or unattended and request these guidelines be followed:
1) Tracking Base stations transmit at 5 minute intervals
2) 50W mobiles transmit at 3 minute intervals
3) 5W HT's transmit at 1 minute intervals

Bob reminds amateurs, "Please do not transmit more often, as it will mess up the statistics. It would be helpful if you put your station info in your posit text so we could confirm the validity of the statistics of your transmit rate". We recommend something like:
"Base=5min +10 dB"
"50W =3min w 5/8ths"
"HT=1min w 19" ant"

On Thursday, the Naval Academy may activate the packet to voice synthesizer.

ANDE operates on 145.825 MHz simplex and responds to packets that are addressed VIA APRSAT or VIA ARISS. For more information please See http://www.ew.usna.edu/~bruninga/ande-ops.html

[ANS thanks the US Naval Academy Satellite Laboratory for the above information]

SB SAT @ AMSAT $ANS-238.03
Digital Communications Conference September 28-30

AMSAT News Service Bulletin 238.03
>From AMSAT HQ SILVER SPRING, MD.
August 26, 2007
To All RADIO AMATEURS
BID: $ANS-238.03

The 26th Annual ARRL/TAPR Digital Communications Conference to be held on
September 28-30, 2007 in Hartford, CT will feature topics of interest to amateur satellite operators. AMSAT Director and VP Engineering, Bob McGwier, N4HY, will have several presentations.

On September 30 Bob will present the Sunday Seminar, "A Stroll Through Software Radio, Information Theory, and Some Applications." Software Radio will be the main theme and a package of tutorials and give away software will be a part of the seminar.

The Software Defined Radio linear transponder system in AMSAT's spacecraft
will be discussed. Some necessary information theory will be discussed with examples with the goal of leaving the attendee with a working knowledge of the practical use of this theory in thinking about communication
systems. As time permits, Bob will show some software radio systems from

the $30 softrock40 to GnuRadio/USRP doing multi megabit per second OFDM on the air and then a technical description of the Flex5000 and DttSP will be given.

Additional Software Defined Radio topics among the digital offerings at the conference include:

+ The FSM Virtual Radio Kernel: Why, What, & How (In That Order); Frank Brickle, PhD, AB2KT

+ AMSAT�s Phase IV (lite)?; Bob McGwier

+ On A Method for Automatic Image Balancing in IQ Mixer Based Software Defined Receivers; Bob McGwier, N4HY

+ TPSK31: Getting the Trellis Coded Modulation Advantage; Bob McGwier, N4HY

+ The Flex 5000 Software Defined Transceiver; Gerald Youngblood, K5SDR

And also known to AMSAT members, Bob Bruninga, WB4APR has written a paper for the conference: The APRS Local Voice Repeater Initiative.

Additional information and on-line registration is at:
http://www.tapr.org/dcc

[ANS thanks TAPR for the above information]

SB SAT @ AMSAT $ANS-238.04
Satellite Shorts From All Over

AMSAT News Service Bulletin 238.04
>From AMSAT HQ SILVER SPRING, MD.
August 26, 2007
To All RADIO AMATEURS
BID: $ANS-238.04

+ Satellite operators can find the latest information about New Zealand's KiwiSAT at http://www.kiwisat.org which is updated weekly. Terry, ZL3QL wrote, "The project is well down the track to completion and this page will give a good idea of what is still required." He invited amateurs to check out and respond to http://www.kiwisat.org.nz/funding.html.

+ Matthias, DD1US invites satellite operators to visit his "Sounds from Space" site at http://www.dd1us.de. He has posted a collection of recordings from various space objects. Most of them are ham radio satellites and space ships.

+ NASA's two venerable Voyager spacecraft are celebrating three decades of flight as they head toward interstellar space. Their ongoing odysseys mark an unprecedented and historic accomplishment. Voyager 2 launched on Aug. 20, 1977, and Voyager 1 launched on Sept. 5, 1977. They continue to return information from distances more than three times farther away than Pluto.

+ Zarya, the International Space Station's first component to go into space, passed the 50,000th orbit mark this week on August 14. Zarya, which is Russian for "Sunrise", was funded by the United States and built by Russia. It launched atop a Proton rocket from Baikonur Cosmodrome in Kazakhstan on Nov. 20, 1998.

+ An interactive guide to the International Space Station can be found on-line at: http://www.nasa.gov/externalflash/ISSRG/index.htm.

+ Google Earth software has now added the capability to view images of the sky. Using the new "Sky in Google Earth" feature you can zoom in Hubble images. Version 4.2 of the software at http://earth.google.com/ contains the additional sky watching features.

+ While not quite amateur radio related, many hams enjoy learning about scientific work in other fields. The events taking place today at CERN's Large Hadron Collider outside Geneva, Switzerland by one of the world's largest assembled teams of scientists attempting to discover what is considered the "Holy Grail" of particle physics, the Higgs Boson, and recreate the conditions that existed a few seconds after the Big Bang are highlighted in an interesting on-line BBC video at: http://video.google.com/videoplay?docid=6454521153918323669

[ANS thanks everyone for the above information]

ARISS Status Report For The Week of August 20, 2007

AMSAT News Service Bulletin 238.05
>From AMSAT HQ SILVER SPRING, MD.
August 26, 2007
To All RADIO AMATEURS
BID: $ANS-238.05

1. University Students Radio ISS

Fifteen students who attend Kursk State University in Russia experienced a successful ARISS contact on Thursday, August 9. The students spoke with cosmonaut Fyodor Yurchikhin, RN3FI, on board the ISS from Mount Elbrus in the Caucasus Mountains, Russia.

2. ARISS Contact with Teacher Barbara Morgan, Successful

The McCall-Donnelly School District in McCall, Idaho participated in an ARISS contact on Thursday, August 16, via the telebridge station VK5ZAI in Australia. The school district consists of two high schools, one middle school, and two elementary schools and approximately 900 students. During the contact, eleven students asked one question each of Barbara Morgan, KD5VNP, in front of an audience of 300. Local media outlets in McCall, Idaho were present to cover the news.

The event was aired live on NASA TV and can be heard online and via podcast at: http://www.nasa.gov/multimedia/podcasting/STS118_morgan_radio.html

Space.com ran an article on Morgan�s space activities including the ARISS contact with the McCall-Donnelly School District. See: http://www.space.com/missionlaunches/070816_sts118_morgan_idaho.html

3. Upcoming School Contacts

Nanjing No. 3 High School in Nanjing, Jiangsu, P.R. China has been scheduled for an ARISS contact on Sunday, August 26 at 10:49 UTC. To prepare for the contact, elective courses will be offered on amateur radio and contests will be held to determine the best essays and cartoons concerning ARISS. Other schools in the area will be invited to the event. The school has an active amateur radio club which was established in 1992 and has been a five time winner of the national youth amateur radio contest. Local hams and businesses will support the students with the contact. Extensive media coverage is expected from newspapers, television and radio stations and the internet. The audio for this event will be fed into the EchoLink AMSAT (101 377), the JSDXC (337 784) and JK1ZRW (277 208) servers. The audio from this event is also planned to be fed into the IRLP Discovery Reflector 9010.

Amagasaki Child Science Hall, located in Amagasaki, Hyogo, Japan has been scheduled for an ARISS contact on Tuesday, August 28 at 08:27 UTC. The children will learn the history of Amagasaki, its economic growth and the problems associated with its growth, such as pollution. They will cover environmental issues and weather patterns that occur globally, and will discuss the purpose of the ISS. An engineer will be invited to speak to the children and will arrange for a tour at his company�s research institute to increase the children�s interest in space.

An ARISS contact has been planned for Ashland Greenwood High School in Ashland, Nebraska on Wednesday, August 29 at 15:59 UTC. A NASA committee was formed at the school, comprised of teachers from grades K-12, in order to promote earth and space science. The school will present one space fact per day to the students over a five week period and at the end of this time a contest will be held to see who remembers the most facts. Clay Anderson, KD5PLA, is an alumnus of the school and visited students there in March 2007. Information about him has been posted to http://www.agps.org/. This event is expected to receive newspaper and television coverage. This contact is a Clay Anderson crew pick.

4. Gail Borden Public Library to Contact ISS via Amateur Radio

The Gail Borden Public Library in Elgin, Illinois, has been tentatively scheduled for an ARISS contact during the week of September 3. Gail Borden Public Library has posted its press release on the event.
See: http://www.gailborden.info/LivewithISS.html

5. ARISS Video to be Presented at AMSAT Symposium

The Orlando, Florida Area Coordinator for AMSAT is currently working on a presentation to be given at the 2007 Radio Amateur Satellite Corporation (AMSAT) Space Symposium which will be held in Pittsburgh, Pennsylvania on October 26- 28. The presentation will include video from the July 17 ARISS contact with the Arnold Palmer Hospital for Children.

[ANS thanks Carol, KB3LKI for the above information]

Xref: g2news2.google.com rec.radio.amateur.space:144

Since RS-15 entered a prolonged period (32 days) of continuous sunlight on Aug 12, it has been audible on almost all of its passes higher than 20deg altitude over my location, and some lower passes. Its beacon frequency has climbed back to 29.35225 to 29.3523MHz, where it is more-or-less stable. This is consistent with my earlier hypothesis that its voltage regulation has failed, and further suggests that the beacon frequency may be varying with the temperature of the spacecraft.

Unfortunately the beacon no longer transmits telemetry, but it will be interesting to see, when the next eclipse season begins on Sep 13, how far its frequency falls with decreasing sunlight, and how erratic its appearances become.

Hi:

What is the highest radio frequency used for radio astronomy?

According to the link below, it is 3438 GHz:

http://books.nap.edu/openbook.php?record_id=11719&page=11

Is 3438 GHz the highest radio frequency used for radio astronomy?

Thanks,

Radium

If you read on a little farther you'll find
'blurring the distinction between radio astronomy and infrared astronomy.'

So where do you want to draw the line between radio astronomy and
infrared astronomy?  There's you're answer.

VO-52 HAMSAT

Catalog number: 28650
Launch Date: May 05,2005

Status: Operational
Current Mode: U/v - Indian Transponder

Frequencies:
Indian Transponder:
Uplink: 435.220 to 435.280 MHz LSB/CW
Downlink: 145.930 to 145.870 MHz USB/CW

Dutch Transponder:
Uplink: 435.225 to 435.275 MHz LSB/CW
Downlink: 145.925 to 145.875 MHz USB/CW

Indian Beacon: 145.859330 MHZ CW
Dutch Beacon: 145.860 MHz 12WPM with CW message

Mode and Antenna Polarization:
V: LHCP
U: RHCP

Official Webpage: http://www.amsat.in/hamsat.htm

To know what transponder is switched on please listen for the beacon that is active. Each transponder has a different beacon.

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink:   145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute
timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the
repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset
the 10
   minute timer.

SB SAT @ AMSAT W8ISS $ANS-239.S5
WSR 239 Part 5 08/27/2007

AMSAT NEWS SERVICE BULLETIN 239.S5 FROM AMSAT HQ
SILVER SPRING, MD, August 27, 2007
TO ALL RADIO AMATEURS
BID: $ANS-239.S5

THE FOLLOWING SATELLITES HAVE DE-ORBITED OR HAVE BEEN RETURNED TO THE GROUND:

NO-60 RAFT-1
Catalog Number: 29661
Launch Date: December 21, 2006

Status: Re-Entered
Re-entered: May 30, 2007

Main Downlink: 145.825 Mhz FM APRS AX25
APRS Uplink: 145.825 MHz FM APRS AX25
Voice/PSK31 Uplink: 28.120 MHz

Packet to Voice ID: RAFT
[06112007]
/EX

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)

* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:
ans-editor{at}amsat.org

Hi, Radium, gwatts, and all.

I'd agree that the real question here may be where to draw the line between radio and infrared, and thus between radio astronomy and infrared astronomy.

What I learned about 40 years ago was that while the line wasn't a clear one, the shortest or highest-frequency range of radio waves traditionally placed in that classification were "millimeter waves" with a wavelength of 1-10mm. Given that the speed of light, c, is very close to 3 x 10^10 centimeters per second, so that a 1 cm or 10mm wave would have a frequency of around 30 Gz, this category (also known as Extremely High Frequency or EHF) has a 30-300GHz range.

A frequency of 3438 GHz, with a wavelength a bit shorter than 100 microns, would thus be about an order of magnitude higher in frequency than the top of the EHF range. While I'm not sure if there's a specific technical name for this range (analogous to the various categories of radio waves like EHF), my first layperson's guess would be that it could be considered very far infrared (that is, far from the visual spectrum and close to radio).

It's interesting question how radio and infrared astronomy are distinguished: mainly by the nature of the waves, or also by the apparatus used. I'd like to to learn more of this myself.

Again, I'd emphasize that in giving the range for EHF, I'm not saying that anything above 300 GHz wouldn't be considered radio, only mentioning this category as an example of what was traditionally considered near the top of the radio spectrum.

Maybe Laura or others could comment more expertly on this.

Most appreciatively,

Margo Schulter

Nobody limited the discussion to *terrestrial* astronomy. If one is
working from space, the transparency of the atmosphere is irrelevant.

Austin

I didn't see anything referring to atmospheric transparency in Ms.
Schulter's response but I'll point you to
http://www.alma.nrao.edu/memos/html-memos/alma187/memo187.html
or
'MMA Memo 187: Modeling of the Submillimeter Opacity on Chajnantor'

specifically figures 1-6 which show opacities through air paths and
modeled opacities over Mauna Kea, HI. Farther on the authors discuss
predicting opacities over the ALMA site in Chile.

What it comes down to is: No, the atmosphere is not 'transparent all
the way up from microwaves to IR,' but there are windows of transparency
where valuable observations can be made.

Something else possibly worth perusing is
http://www.cv.nrao.edu/naasc/presentations/ALMA_2007_Handout.pdf

and of course the entire ALMA/MMA Memo Series,
http://www.alma.info/

I don't believe Margo suggested that at all. This
page lists some of the sources of line features
in that region:

http://kp12m.as.arizona.edu/docs/what_is_submillimeter.htm

The ITU definition of "radio" ends at the top of EHF, at 300 GHz. However, this is more a reflection of the technical state of the art at the time the definition was made. Earlier definitions ended at 30 GHz, or even lower. I've read papers in journals for radio equipment that operates above 400 GHz. You need a microscope to inspect the components. :-)

Above 300 GHz is no man's land, in that no radio license is required to send signals. Laser communication links are not licensed as radios; they are not generally licensed at all, unless health & safety officials take an interest in the lasers themselves.

The spectrum between EHF and infrared is viewed as not useful for communication, because the atmosphere is more-or-less opaque at these wavelengths. But that's what they said about frequencies about 30 MHz in the 1920s, too. And in space, who cares?

The usual agreement is that it's radio astronomy when the incoming signals are electronically detected (e.g. diodes) and processed. It's optical/infrared astronomy when the incoming signals are measured by a bolometer or other non-electronic means. There is, naturally, some crossover.

They are called submillimeter waves, and represent the transition between what is widely accepted as "radio" and what is widely accepted as "optical".

IMO the best way to categorize EM bands is by the nature of the equipment we use to measure energy in those bands. Submillimeter radiation is detected using special receivers which combine optical-like sensors (bolometers) and radio-like sensors (heterodyne receivers and tuned antennas). I think its best to simply consider the range from about one millimeter to 1/10 millimeter as "submillimeter", neither radio nor optical (IR).

Or perhaps we could consider that wavelength band both "optical" and
"radio", since radiation at those wavelengths probably can be detected
both with radio and with optical equipment.

And if one wants to decide on some single wavelength limit between
"radio" and "optical", 0.3 millimeter appears to be a good choice
since it resides near the middle of this "submillimeter" band.  This
corresponds to a frequency of one TeraHertz.

Given today's CCD chips which indeed are electronic devices, does that
mean todays optical telescopes, with CCD chips which detect light
electronically, have become radio telescopes?

And in fact, e-m radiation at and around that frequency is often called Terahertz radiation, or Terahertz waves, or T-rays, etc. More specifically, from 300 GHz to 3 THz is the Terahertz band. This terminology seems to be used more in non-astronomical fields.

That's a little illogical. It's like considering a frequency slightly
above 300 kHz to belong to "the Megahertz band" ....

Seems logical to me.  Anything above 316kHz is nearer to 1MHz than to
100kHz.

There's a difference between "the Megahertz band" and "the One Megahertz band". The former can be interpreted as the band from 1 MHz to 1 GHz for instance, instead of your interpretation from 0.316 to 3.16 MHz....

No, it's _more_ logical. It's having arbitrary names for various regions
of the EM spectrum that isn't entirely logical.

For obtaining eye candy that's entirely outside of our physical reach, and for the most part having been getting further away as we speak, the 3.438 THz might be fine and dandy for accomplishing that spendy look-see which can't possibly benefit humanity or that of our badly failing environment.

Much above 0.1 THz is where such photons if transmitted from Earth simply do not reflect unless the target offers a nifty array of parabolic dishes, or of some other artificial reflective surface. Outside of our magnetosphere, such as within our moon's L1, is where X band of 8 ~ 12.5 GHz or possibly as great as Ka Band of 26.5 ~ 40 GHz might become interesting and/or essential if future space travel is to avoid those nasty bits and pieces of debris that'll otherwise clean your clock upon encountering such, with C Band of 4 ~ 8 GHz being a little better off for those slightly larger targets and perhaps best of all S Band of 2 ~ 4 GHz offering a compromise that'll still yield more than sufficient image resolution of a given planet or moon, along with offering a darn good reflective signal to noise ratio.

However, if the potential target is the least bit intelligent worthy, as many should be, as such why not use a blue~violet laser cannon, UV-a, or possibly good old X-rays or even gamma ?

Though gravity can be directly measured, of what we can't manage thus far is the two-way frequency applications of utilizing said gravitons. Perhaps there again, the mutual gravity nullification zone of our moon's L1 could allow for the limited use of gravitons, and this alternative might become better yet once we've relocated that moon to Earth's L1.

Can't say I agree with that; CCDs count photons, which makes
them a lot closer to bolometers than diodes.

The other issue, of course, is just what difference it makes.
Astronomers examine the universe to see how it works.
They use various wavelengths to do it.

Sorry, I meant to ask whether 3,438 GHz is the highest radio frequency
used to receive audio signals from outer space. I should have made my
question more specific. Radio-astronomers study sounds from the sun as
well as visual data.

I wonder if a space station with a 3,438 GHz AM receiver could pick up
any extremely-distant audio signals between 20 to 20,000 Hz [from
magnetars, gamma-ray-bursts, supernovae and other high-energy but
cosmic objects] after demodulating the 3,438 GHz AM carrier wave.

Radio astronomers study EM radiation, not "sounds", from the Sun. Since there's a vacuum between the Sun and us, no sound waves would be able to propagate from the Sun to us. Otoh careeful studies of Doppler shifts have enabled solar astronomers to study sound waves *within* the Sun. But these sound waves never reach us - we can only study them indirectly because they move matter near the solar surface. And their frequencies are usually well below what the human ear can hear, i.e. it's infrasound.

> I wonder if a space station with a 3,438 GHz AM receiver could pick up

They could certainly try .... but if they did, and succeeded, it would sound just like noise. This radiation does not originate as audio signals, and they're certainly not put on an AM modulated carrier. Therefore it's hardly useful to try to demodulate these waves as if they were AM modulated signals - there's e.g. no AM carrier (i.e. one single frequency which is stronger than all the others within the frequency band).

Also, any audio (= pressure waves within a gas) which are formed outside the Earth is certainly *not* limited to the 20 to 20,000 Hz frequency range..... that frequency range is merely the limits of what the human ear can hear.

The radio-frequency EM radiation emitted from the sun does translate
to sound when it is picked up by a radio receiver of the same carrier
frequency.

> Otoh careeful studies of
> Doppler shifts have enabled solar astronomers to study sound waves

That's why audio software is often used to speed up the infrasound
until it is at least 20 Hz so that humans can hear it.

> > I wonder if a space station with a 3,438 GHz AM receiver could pick up

Well, most natural sources of EMI and RFI are amplitude-modulated. The audio signals are not put on the carrier wave, however if the variations in the peak-to-peak amplitude of the 3,438 GHz electromagnetic waves correspond to frequencies between 20 and 20,000 Hz [and the peak-to-peak variations are sufficient in power], then the signal can be picked up of 3,438 GHz receiver and demodulated. The result would be audio signals.

> Therefore it's hardly useful to try to demodulate these waves as if
> they were AM modulated signals - there's e.g. no AM carrier (i.e. one

> Hz frequency range..... that frequency range is merely the limits
> of what the human ear can hear.

Audio waves from 20 to 20,000 Hz can be derived from demodulating radio waves. Since most natural radio disruptions are amplitude-modulated it would be easier to listen to cosmic sounds using an AM receiver as opposed to an FM receiver. FM is immune to the disruptions that normally affect AM.

In AM demodulation:

1. The amplitude of the demodulated signal [what we hear] is determined by the depth-of-change of the peak-to-peak amplitude of the radio wave. If the peak-to-peak amplitude of the radio wave is above the central amplitude** then the demodulated signal will have a positive voltage. If the peak-to-peak amplitude of the radio wave is below the central amplitude then the demodulated signal will have a negative voltage. If these changes in voltages are between 20 and 20,000 Hz*, then they will be audible if the over voltage is high-enough and this signal is fed into a loudspeaker
2. The frequency of the demodulated signal is determined by the rate-of-change of the peak-to-peak amplitude of the radio wave

*In an electric signal, a cycle is when a voltage changes from zero to positive to zero to negative and then back to zero. In USA, the power supply is 60 Hz [cycles per second] while being 50 Hz in Europe. In order to produce audible sound when fed to a loudspeaker, the peak-to-peak voltage must be high-enough to reach the threshold of hearing or above and must be at least 20 Hz but no more than 20,000 Hz.

A loudspeaker produces the mechanical equivalent of the electric signal it receives.

** Central amplitude = amplitude of the radio wave when there is no modulation signal.

> frequency.

Here you make the silent assumption that the electric signal from the
radio receiver is fed to a loudspekarer. But that's just *one*
possible way of converting the EM radiation. You could use other ways
too. For instance displaying it on some video screen - those who do
so could claim that "The radio-frequency EM radiation emitted from the
sun does translate to light when it is picked up by a radio receiver
of the same carrier frequency" (with the silent assupmtion that the
output from the receiver is displayed on a video screen). It's the
translator who decides what the EM radiation translates to....

Btw did you ever try to *listen* to a TV transmission? I mean, to feed
the *video* signal (not the audio signal) to a loudspeaker instead
of a video screen? Yep, the sound changes with the contents of the
picture - but of course one hears only the lowermost part of the 5 MHz
of bandwidth a normal video signal has.

Another interesting experience is to feed a digital signal directly to
a loudspeaker instead of decoding and converting it to an analog
signal first. That of course requires that the digital signal is
within the audible range of frequencies -- the signal from a
traditional telephone modem would be quite suitable here. The old 300
bps modems produced a signal with a quite clear structure (the signal
jumped between two frequencies 300 times per second), but the more
modern telephone modems which can handle bit rates up to 57600 bps,
they sound pretty much like white noise to the human ear.

:-) ....there's no need to speed it up just to convert the frequency
into the audible range.... the frequency can be bumped up even if
the original speed is maintained.

>>> I wonder if a space station with a 3,438 GHz AM receiver could pick up
>>> any extremely-distant audio signals between 20 to 20,000 Hz [from

>
> Well, most natural sources of EMI and RFI are amplitude-modulated.

They're probably frequency modulated and phase modulated as well, since their contents are pretty random. I strongly doubt they consist of one single frequency whose amplitude varies while its frequency and phase remains unchanged (that's the way a properly modulated AM signal would be). In particular it won't have symmetrical sidebands with the same content, the way a real AM signal should have.

> The audio signals are not put on the carrier wave, however if the variations in the peak-to-peak amplitude of the 3,438 GHz electromagnetic waves correspond to frequencies between 20 and 20,000 Hz [and the peak-to-peak variations are sufficient in power], then the signal can be picked up of 3,438 GHz receiver and demodulated. The result would be audio signals.

Trivially true -- but these audio signals would be created by us humans. They're not inherent in the original signal.

>> Therefore it's hardly useful to try to demodulate these waves as if they were AM modulated signals - there's e.g. no AM carrier (i.e. one single frequency which is stronger than all the others within the frequency band).
>
>> Also, any audio (= pressure waves within a gas) which are formed outside the Earth is certainly *not* limited to the 20 to 20,000 Hz frequency range..... that frequency range is merely the limits of what the human ear can hear.
>
> Audio waves from 20 to 20,000 Hz can be derived from demodulating radio waves.

You can create audio waves also below 20 Hz and above 20,000 Hz as well. Humans won't hear them, true, but dogs and bats might enjoy them... :-)

> Since most natural radio disruptions are amplitude-modulated it would be easier to listen to cosmic sounds

These sounds aren't "cosmic" - they're created here on Earth by us humans.

> using an AM receiver as opposed to an FM receiver. FM is immune to the disruptions that normally affect AM.

Did you ever try to tune an FM receiver between radio stations on the FM band? Also turn off any "muting" or "squelch" the receiver may have. What do you hear? Silence? Or perhaps noise?

You say "FM is immune to the disruptions that normally affect AM". If this is to work, you must have an FM carrier which is strong enough for the receivers amplitude limitation circuits to work well. Cosmic radio noise is far too weak for that.

Most all ET signals are processed by some kind of technology, so that we can then see or hear the information contained within that signal. If the signal information is encrypted or otherwise weird, then seeing the signal is usually the better alternative.

I believe 0.1 TeraHertz of 3 mm is more than good enough, as being roughly 10 fold higher in frequency than any X Band radar imaging efforts sent from Earth would ever manage to contribute all that much due to our terrestrial atmosphere and magnetosphere that'll convert and/or divert much of that outgoing and incoming X Band energy.

However, a blue/violet laser cannon would likely become by far the most energy efficient and focused alternative for outgoing as well as incoming signals, especially if those efforts were getting off-world managed, such as within the nearby turf of our moon's L1 could easily accommodate. At least in that way an amateur terrestrial or ET astronomer could rather easily detect such without special instruments.

There's all kinds of nifty ways for us to hear and/or see what our moon has to say. It's sodium populated atmosphere along with the surface likes of radon are worth a good deal of science about solar wind and cosmic interactions, as well as for the graviton/tidal issues associated with having to orbit Earth as well as the sun that should be responsible for keeping the low density core of our moon a little extra toasty, as a renewable geothermal cache of energy that could essentially accommodate a fairly extensive underground protected human use of our moon.

I've done this before. Plugged the video signal into the audio receiver. There is some buzzing sound. As you said, that sound changes as video signal changes.

Interesting indeed. However, are those old modems really "digital"?

Is this done using audio software such as Adobe Audition?

Quotes from http://www.adobe.com/products/audition/overview2.html :

"Time and pitch processing: Change tempo without shifting pitch - or shift pitch without changing tempo - and never introduce audio artifacts."

White noise. Hissing. Nothing special.

Hi, Laura, and thanks to you and others very helpful responses
on this point. A bit of browsing the Web has shown me that
definitions can vary, for example with the portion of the
submillimeter spectrum around 300 GHz - 1 THz (or 1mm - 300um)
being considered as more "radio-like" by some.

> The spectrum between EHF and infrared is viewed as not useful

Exactly; and it's interesting some of the special environments
which are above most of the atmosphere's water vapor, or
dessicated, that are used for terrestrial observations at
certain points in the EHF and submilliter spectrum.

Most appreciatively,

Margo Schulter

Hi, Peter, and thank you for your correct conclusion that in my post
I really wasn't concerned with transparency or propagation questions,
only with the general question of how to describe what I now have learned
is often called the submillieter portion of the spectrum.

>
> What it comes down to is: No, the atmosphere is not 'transparent all
> the way up from microwaves to IR,' but there are windows of transparency
> where valuable observations can be made.

That sounds to me like good summary, which would also fit what I recall
from the 1960's about certain regions of EHF -- maybe around 60GHz or
so -- where attentuation or extinction from water vapor is especially
notable. Maybe this is a bit analogous to the absorption lines of
visual spectroscopy.

Of course, as Laura has pointed out, in space this kind of attenuation
is not really a problem!

Thanks for these links, which I'll study.

Most appreciatively,

Margo Schulter

On one side only ..... the signal sent out on the phone line is of
```

course analog. So what one listens at is a digital signal modulating one or several analog carriers. And this applies not only to old modems but to new modems as well. E.g. ADSL modems work pretty much the same way, except that an ADSL modem has severam MHz of analogue bandwidth available, compared to the 3 kHz of bandwidth an old telephone modem has available.

Obviously one can use Audio Audition for that. It could even be done several decades ago, using analogue techniques.

Another possible way would be to let the low frequency signal amplitude modulate a carrier with an audible freqneucy, and then filter away the carrier as well as the lower side band. This will have the effect of adding a fixed frequency (the carrier frequency) to all frequencies in the low frequency signal. Ham radio operators using SSB will know exactly what I'm talking about.

Most signals received by radio telescopes will "sound" pretty much the same.

Btw, did you know that you can use an FM radio to observe meteor showers? CHoose a radio station which normally is a little bit too far away to hear, then direct your antenna towards it. Next, wait for the meteors - and listen to your radio station briefly as its radio waves are reflected against the meteor trail....

I'm just getting back into satellites and went looking for Dr. Ransomes
STSPLUS software only to sadly discover that Dr. Ransome has passed away.
I'm trying to locate a late/latest copy of the STSPLUS software program in a
zip file. I'm using XP Home but would willingly switch back to ME to be able
to use this software. Can anyone help out with a zipped copy?? Thanks Ralph

Awww man, he passed on? I had no idea. STSPlus is awesome. Mr. Ransom,
THANK YOU SIR for all the work you've done over the years.

Tom R.

AMSAT NEWS SERVICE
ANS-175

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an

active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:

* AO-51 in V/S Mode for Last Week of June
* Delfi-C3 Satellite Integration for Planned Autumn Launch
* 2007 AMSAT BoD Candidates List Announcement
* New Items in the AMSAT On-Line Store
* Satellite Shorts From All Over
* ARISS Status Report for the week of June 18, 2007

SB SAT @ AMSAT $ANS-175.02
Delfi-C3 Satellite Integration for Planned Autumn Launch

AMSAT News Service Bulletin 175.02
>From AMSAT HQ SILVER SPRING, MD.
June 24, 2007
To All RADIO AMATEURS
BID: $ANS-175.02

Wouter Jan Ubbels, PE4WJ, Delfi-C3's project manager of electronic systems and communications at the Delft University of Technology in the Netherlands reports that their satellite is being integrated and tested in preparation for launch in September or October, 2007.

The Delfi team has posted photos of the satellite integration work at: http://www.delfic3.nl/photoblog/.

Delfi-C3 is a 3-unit CubeSat carrying redundant radio transceivers, connected to the antenna system by a hybrid combiner. Both transceivers consist of a UHF front end, a command receiver, linear IF, telemetry generator and the final stages capable of 400mW RF power.

Delfi-C3 contains no batteries because it's primary mission is to perform a solar cell and sun sensor experiment so the spacecraft will only be active when in sunlight.

The first three months of the mission will perform the science mission, in which the spacecraft will be transmitting 1200 bit/s AX.25 telemetry on the primary or backup VHF downlink. (See http://www.delfic3.nl for frequency information.) Telemetry will be transmitted once per second.

A Java application will be available for download from the website to display telemetry in real time, and upload it to Delfi's central server in Delft. A soundcard application in Java is planned to be available to decode the BPSK signal. The MixW software package will also be compatible with the telemetry signal.

After three months, the linear transponder will be activated, with a 40kHz bandwidth. In transponder mode, a CW beacon will be active instead of BPSK telemetry. It will transmit a message saying "hi hi de delfi-c3 delfi-c3". Since Delfi-C3 will transmit with only 400mW of downlink power, earth stations will need to prepare a good receive system.

TLE's will be anounced on the website (http://www.delfic3.nl) once they are available. Preliminary parameters of the orbit are:
 + altitude: 630km circular
 + inclination: 97.91 degrees
 + sun-synchronous

[ANS thanks Wouter Jan Ubbels, PE4WJ for the above information]

SB SAT @ AMSAT $ANS-175.03
2007 AMSAT BoD Candidates List Announcement

AMSAT News Service Bulletin 175.03
>From AMSAT HQ SILVER SPRING, MD.
June 24, 2007
To All RADIO AMATEURS
BID: $ANS-175.03

Nominations for the 2007 AMSAT Board of Directors have closed. The list of qualified candidates is:

Barry Baines WD4ASW
Drew Glasbrenner KO4MA
Rick Hambly W2GPS
Lee McLamb KU4OS
Gunther Meisse W8GSM

The terms of four directors are up this year. Directors serve a two year term. Ballots and biographical information submitted by each candidate will be in the mail to current AMSAT members by July 15th and completed ballots must be received at the AMSAT office in Silver Spring no later than the close of business on September 15th. Terms of the new directors start upon certification of the election.

Barry Baines, WD4ASW
Corporate Secretary

[ANS thanks Barry Baines, WD4ASW for the above information]

SB SAT @ AMSAT $ANS-175.05
Satellite Shorts From All Over

AMSAT News Service Bulletin 175.05
>From AMSAT HQ SILVER SPRING, MD.
June 24, 2007
To All RADIO AMATEURS
BID: $ANS-175.05

+ Clive G3CWV's OSCAR-11 report for the week of 16 June 2007 summarizes operations as, "No signals have been received from the satellite's 145.826 MHz beacon because it remains in eclipse. Listen for signals starting around August 20."

+ F.Costa, CT1EAT, has a QSL for auction from Owen K. Garriott (W5LFL), the first radio amateur who operated from space, during the STS-9 mission in 1983. Please see photos at http://ct1eatsale.no.sapo.pt/ He will acept bids, in EURO currency, until 00.00 UTC 25 June 2007. The highest bidder will donate the amount for an AMSAT/ARISS project of their choice. He will send the card to the winner for free via registered airmail. Please send your bids to ct1eat@amsat.org.

+ Peter Guelzow, DB2OS reported the AMSAT-DL/IUZ team received congratulations from the Voyager Flight Team on their successful reception of the furthest manmade object in space. The message read, "Congratulations on your successful downlink acquisition of Voyager 1 at your 20 meter tracking station. Acquiring such a distant object is a remarkable achievement, especially for an amateur team. Thank you very much for your interest in Voyager." Peter summarizes, "It also demonstrates now officially that the 20m dish is good enough to support the AMSAT P5-A Mission to Mars."

[ANS thanks everyone for the above information]

SB SAT @ AMSAT $ANS-175.06
ARISS Status Report for the week of June 18, 2007

AMSAT News Service Bulletin 175.06
>From AMSAT HQ SILVER SPRING, MD.
June 24, 2007
To All RADIO AMATEURS
BID: $ANS-175.06

1. Russian ARISS Contact Successful

On Thursday, June 14, an ARISS contact was made between the International Congress of Slavic States Conference in Sochi, Russia and the ISS. Cosmonaut Fyodor Yurchikhin, RN3FI participated in the event.

2. Upcoming School Contacts

The ARISS team continues to work on scheduling school contacts for Expedition 15.

3. Technical Interchange Meeting

The ARISS team is planning a Technical Interchange Meeting during the week of July 9 in Houston. The team plans to discuss radio system hardware, software and the SuitSat-2 project.

4. ARISS International Meeting

The ARISS teleconference will on Tuesday, June 19 discussed the next ARISS face to face meeting, SuitSat-2 and the Columbus Module.

[ANS thanks Carol, KB3LKI for the above information]

/EX

In addition to regular membership, AMSAT offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT Office.

73,
This week's ANS Editor,
JoAnne Maenpaa, K9JKM

SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u
```

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
   on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
   and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
   minute timer.

=====
INTERNATIONAL SPACE STATION (ISS) - ARISS
Catalog number: 25544
Launch date: November 20, 1998

Status: Operational

Current Mode: Occasional Voice/Packet/Digipeater

Expedition 15 crew:
Commander: Fyodor Yurchikhin RN3FI
Flight Engineer: Clayton C. Anderson
Flight Engineer: Oleg Kotov

STS-117 Crew:
Mission Commander: Frederick Sturckow
Shuttle Pilot: Lee Archambault
Flight Engineer: Sunita Williams KD5PLB
Mission Specialist: James Reilly II
Steven Swanson
Patrick Forrester
John D. Olivas

Available Modes and Frequencies:
Digital/APRS:
Worldwide packet uplink: 145.990 MHz FM
Worldwide packet downlink: 145.800 Mhz FM

Voice:
Region 1 voice uplink: 145.200 MHz FM
Region 2/3 voice uplink: 144.490 MHz FM
Worldwide downlink: 145.800 MHz FM

SSTV TESTING:
Worldwide Reported Downlink: 145.800 MHz FM

Crossband Repeater:
Repeater Uplink: 437.800 MHz FM
Repeater Downlink: 145.800 MHz FM

Mode and Antenna Polarization:
V: Linear

U: Linear

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

```
Voice: 301-589-6062
       888-322-6728
FAX:   301-608-3410
```

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

AMSAT NEWS SERVICE
ANS-182

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

In this edition:
* Call for papers - 2007 AMSAT Space Symposium and Annual Meeting
* AMSAT Awards
* Field Day Results Reminder
* ARISS Status - 25 June 2007

SB SAT @ AMSAT $ANS-181.01
Call for papers - 2007 AMSAT Space Symposium and Annual Meeting

AMSAT News Service Bulletin 181.01
 From AMSAT HQ SILVER SPRING, MD.
July 1, 2007
To All RADIO AMATEURS

BID: $ANS-181.01

This is the second call for papers for the 2007 AMSAT Space Symposium and Annual Meeting to be held October 25-28, 2007 in Pittsburgh, Pennsylvania.

Proposals for papers, symposium presentations, and poster presentations are invited on any topic of interest to the amateur satellite program. An
emphasis for this year is an educational outreach to middle and high school students. In particular, papers on the following topics are solicited:

Students & Education, ARISS, AO-51, P3E, Eagle and other satellite-related topics.

We request a one-page abstract as soon as possible. Camera ready copy on paper or in electronic form will be due by September 1, 2007 for inclusion in the printed symposium proceedings. Papers received after this date will not be included in the printed proceedings.

Abstracts and papers should be sent to: Daniel Schultz N8FGV by e-mail to:
n8fgv@amsat.org

[ANS thanks the AMSAT 2007 Symposium Committee for the above information]

SB SAT @ AMSAT $ANS-181.03
Field Day Results Reminder

AMSAT News Service Bulletin 181.03
>From AMSAT HQ SILVER SPRING, MD.
July 1, 2007
To All RADIO AMATEURS
BID: $ANS-181.03

Now that field day is over, It is hoped everyone that participated had as much fun as they had expected. There is just one more thing to do. Be sure to send in your results and photos.

The Satellite Summary Sheet should be used for submission of the AMSAT Field Day competition and be received by KK5DO (email or postal mail) by 11:59 P.M. CDT, Monday, July 16, 2007. The preferred method for submitting your log is via e-mail to kk5do@amsat.org or kk5do@arrl.net.

You may also use the postal service but give plenty of time for your results to arrive by the submission date. Add photographs or other interesting information so that can be used an article for the Journal.

You will receive an email back (within one or two days) from me when your email submission is received. If you do not receive a confirmation message, try sending it again or send it to my other email address.

If mailing your submission, the address is:

Bruce Paige, KK5DO
Director of Awards and Contests
PO Box 310
Alief, TX 77411-0310.

Certificates will be awarded to the first-place emergency power/portable station at the AMSAT General Meeting and Space Symposium in Pittsburgh in October 2007. Certificates will also be awarded to the second and third place portable/emergency operation in addition to the first-place home station running on emergency power. Stations submitting high, award-winning scores will be requested to send in dupe sheets for analog contacts and message listings for digital downloads.

[ANS thanks Bruce, KK5DO, for the above information]

SB SAT @ AMSAT $ANS-181.04
ARISS Status - 25 June 2007

AMSAT News Service Bulletin 181.04
>From AMSAT HQ SILVER SPRING, MD.
July 1, 2007
To All RADIO AMATEURS
BID: $ANS-181.04

1. Upcoming School Contact

The Challenger Learning Center of Alaska in Kenai, Alaska has been scheduled for an Amateur Radio on the International Space Station (ARISS) contact on Saturday, July 7 at 19:43 UTC. The center engages Elementary and Middle school students in space exploration, science, math and technology. Home schooled children will also be invited to participate in the contact and there is a possibility of reaching rural students through a School Access video conference. Workshops are planned prior to the contact to introduce children to the ISS, its mission and the crew's workload. Students will participate in poster and essay competitions related to space exploration. Media will be notified and coverage is expected on both a local and national level.

2. Amateur Radio Contact on Youth Day

To celebrate Youth Day on Saturday, June 16, students in South Africa spoke with astronaut Bill McArthur, KC5ACR, via amateur radio. Amateur Radio on the International Space Station (ARISS) member Hans van de Groenendaal, ZS6AKV, arranged the contact with a few undergraduates and other students from a high school radio club who had just earned their ham licenses a few days earlier. The headmaster was pleased with the outcome and plans to promote Amateur Radio as a major support subject at the school.

3. ARISS International Meeting Held

An Amateur Radio on the International Space Station (ARISS) teleconference was held on Tuesday, June 19. Agenda items discussed included the next ARISS face to face meeting, SuitSat-2 and the Columbus Module antennas. Minutes from the meeting have been posted to the ARISS website. See: http://www.rac.ca/ariss/arisstel2007-06-19.htm

[ANS thanks Carol, KB3LKI, for the above information]

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml
(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10

minute timer.

UO-22 UOSAT
Catalog number: 21575
Launched: July 17, 1991

Status: Non-Operational

Uplink:   145.900 FM 9600-baud FSK
Downlink: 435.120 MHz FM

Broadcast Callsign: UOSAT5-11
BBS: UOSAT5-12
[01222007]
=====
AO-21 AMSAT-OSCAR 21
Catalog Number: 21087
Launch Date: January 29, 1991

Status: Operational

Uplink:   435.041 MHz FM DSP
Downlink: 145.983 MHz FM DSP
[01222007]
=====
FO-20 JAS-1b
Catalog number: 20480
Launch Date: February 07, 1990

Status: Non-Operational

Beacons:   435.795 MHz CW
           435.910 MHz AX25

Voice Transponder:
Uplink:   145.900 to 146.000 MHz CW/LSB
Downlink: 435.800 to 435.900 MHz CW/USB

Digital Transponder:
Uplinks:  145.850 MHz
          145.870 MHz
          145.890 MHz
          145.910 MHz
Downlink: 435.910 MHz

More FO-20 info can be found at:
http://www.amsat.org/amsat/sats/n7hpr/fo20.html
[01152007]
=====
LO-19 LUSAT
Catalog number: 20442
Launched: January 22, 1990

Status: CW Beacon only
```

Uplinks: 145.840 MHz 1200-baud Manchester FSK
                  145.860 MHz 1200-baud Manchester FSK
                  145.880 MHz 1200-baud Manchester FSK
                  145.900 MHz 1200-baud Manchester FSK

CW downlink: 437.125 MHz

Digital downlink: 437.150 MHz SSB (RC-BPSK 1200-baud PSK)

Broadcast Callsign: LUSAT-11
BBS: LUSAT-12o

[01222007]
=====
WO-18 WEBERSAT
Catalog Number: 20441
Launch Date: January 22, 1990

Status: Non-Operational

Downlink: 437.104 MHz SSB 1200 Baud PSK AX.25
[05012006]
=====
DO-17 Dove
Catalog Number: 20440
Launch Date: January 22, 1990

Status: Non-operational.

Downlink: 145.825 MHz FM 1200 Baud AFSK
Beacon: 2401.220 MHz
[05012006]
=====
UO-14 UoSAT-3
Catalog number: 20437
Launched: January 22, 1990

Status: Non-operational

Uplink: 145.975 MHz FM
Downlink: 435.070 MHz FM
[05092004]
=====
FO-12 Fuji-OSCAR 12
Catalog Number: 16909
Launch Date: August 12, 1986

Status: Non-Operational

Mode V/U (J) Linear Transponder (Inverting): Non-Operational
Uplink: 145.9000 - 146.0000 MHz SSB/CW

Downlink 435.8000 - 435.9000 MHz SSB/CW

Mode V/U (J) Packet: Non-Operational
Uplink: 145.8500 MHz MFSK 1200 BPS
Uplink: 145.8700 MHz MFSK 1200 BPS
Uplink: 145.8900 MHz MFSK 1200 BPS
Uplink: 145.9100 MHz MFSK 1200 BPS

Downlink 435.9100 MHz PSK 1200 BPS

Telemetry Beacon: 435.7950 MHz SSB/CW
[01152007]
=====
AO-10 OSCAR 10
Catalog number: 14129
Launch Date: June 16, 1983

Status: Non-operational

Uplink: 435.030 to 435.180 MHz CW/LSB
Downlink: 145.975 to 145.825 MHz CW/USB

Beacon: 145.810 MHz (unmodulated carrier)

W4SM has more information about the satellite at the following URL:

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:
http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

This is amazing - well worth taking the time to read it!

NASA Science News for July 6, 2007
A pair of robots named ASTRO and NextSat have been working together in Earth orbit, docking, undocking, flying around and refueling, as if they have minds of their own. Their adventures may herald a revolution in the way we explore space.

=====
SO-50 SAUDISAT-1C
Catalog number: 27607
Launched: December 20, 2002

Status: Operational.

Current Mode: V/u

Uplink: 145.850 MHz FM - 67.0 Hz PL tone
Downlink: 436.795 MHz

Mode and Antenna Polarization:
V: Linear
U: Linear

Official Webpage: http://saudisat.kacst.edu.sa/index.shtml

(not up and running currently)

To switch the transmitter on, you need to send a CTCSS tone of 74.4 Hz.
The order of operation is thus: (allow for Doppler as necessary):
1) Transmit on 145.850 MHz with a tone of 74.4 Hz to arm the 10 minute timer
on board the spacecraft.
2) Now transmit on 145.850 MHz (FM Voice) using 67.0 Hz to PT the repeater on
and off within the 10 Minute window.
3) Sending the 74.4 tone again within the 10 minute window will reset the 10
minute timer.

ANS is released worldwide via the AMSAT ANS e-mail reflector and a live radiocast on the AMSAT-NA 20-meter net held each Sunday on 14.282 MHz. Pre-net operations start at 18:00 UTC, with current ANS bulletins transmitted to the eastern U.S. at 19:00 UTC and to the western U.S. at 19:30 UTC.

Information on AMSAT-NA is available at the following URL:

http://www.amsat.org

Mailing address:
AMSAT-NA
850 Sligo Avenue, Suite 600
Silver Spring, Maryland 20910-4703

Voice: 301-589-6062
       888-322-6728
FAX: 301-608-3410

Currently, AMSAT-NA supports the following (free) mailing lists:

* AMSAT News Service (ANS)
* General satellite discussion (AMSAT-BB)
* Orbit data (KEPS)
* Manned space missions (SAREX)
* District of Columbia area (AMSAT-DC)
* New England area (AMSAT-NE)
* AMSAT Educational Liaison mailing list (AMSAT-EDU)
* AMSAT K-12 Educational Liaison mailing list (AMSAT-K12)

A daily digest version is available for each list.

To subscribe, or for more list information, visit the following URL:
http://www.amsat.org/mailman/listinfo/ans

In addition to regular membership, AMSAT-NA offers membership in the President's Club. Members of the President's Club, as sustaining donors to AMSAT Project Funds, will be eligible to receive additional benefits. Application forms are available from the AMSAT-NA Office.

This week's Weekly Satellite Report Editor is James French, W8ISS.

ANS is always dedicated to past ANS editor 'BJ' Arts, WT0N, and to the memory of longtime AMSAT supporters Werner Haas, DJ5KQ, Dennis Kitchen, G0FCL and John Branegan GM4IHJ.

Please send any amateur satellite news or reports to:

Hi:

Do magnetars emit AM radio waves below the medium-wave range? If so,
how do we detect these waves? Can these waves be heard on the AM
radio? If so, what do they sound like?

Thanks,

Radium

Why would you expect a star to generate amplitude modulation?

Why would you expect it to generate anything else? These sorts of objects are rotating at high speed, which modulates the amplitude we receive. While there are probably other types of modulation as well, the amplitude variation is the dominant effect. Of course, magnetars are emitting mainly hard x-rays. I don't know that there's enough long wavelength energy to detect on any kind of ordinary radio.

Frequencies above approximately 100 MHz almost always get through
the ionization layers.

Frequencies in the approximate range of 10 MHz to 100 MHz sometimes
get through

Frequencies below approximately 10 MHz almost never get through.

So, if by "the AM radio" you mean a Broadcast Band radio which
runs from about .5 MHz to 1.2 MHz, not a chance in hell of ever
hearing anything from off the planet.

Try again.

Okay. But what if this is a supercooled AM radio receiver on a spaceship orbiting Earth? If I am on a space station like MIR and this station has a supercooled AM radio 44.1 KHz frequency receiver, will I hear anything specific of magnetars?

44.1 KHz is the carrier-frequency this hypothetical receiver receives.

I place the frequency of this hypothetical AM radio carrier wave at 44.1 KHz for the same reason CDs use a sample rate of 44.1 KHz -- it is the minimum required to prevent aliasing.

AFAIK, space station orbit earth above the ionosphere so the limitations [preventing long-waves from outer space from reaching the Earth's surface] do not apply.

Generally, super cooled electronic components stop working.

Try again.

> 44.1 KHz is the carrier-frequency this hypothetical receiver receives.

A super stupid frequency to pick. Generally for listening for natural
phenomena, you want a wide as possible bandwidth given the noise
floor.

> I place the frequency of this hypothetical AM radio carrier wave at

Yeah, for digitized, audible music, you twit.

Are you expecting to hear alien rock and roll?

An AM receiver isn't digitizing anything, sample rates don't apply,
and aliasing doesn't apply.

Try again, idiot.

> AFAIK, space station orbit earth above the ionosphere so the

Probably the only thing you got right.

Isn't a super cooled receiver less vulnerable to thermal noise than a
receiver of a higher temperature? This is why SETI super-cools their
radio receivers. So that the heat will not generate electric currents
that would drown-out the intended signals in hiss.

> > 44.1 KHz is the carrier-frequency this hypothetical receiver receives.

Isn't it true that the carrier-frequency must be at least 2x the highest intended frequency of the modulator signal?

I am not talking about sample rates. I am talking about carrier frequency. From the answers to my previous questions regarding carrier frequencies, I thought it was established that you mathematically can't have a modulator frequency more than 0.5x the carrier-frequency. What happened?

Since humans hear up to 20 KHz it is mathematically-required that the carrier frequency be at least 40 KHz or 2 x 20 KHz. Due to physical factors it would be most practical to use a carrier frequency slightly higher than 2x the maximum intended modulator frequency -- hence 44.1 KHz.

No.

> I am not talking about sample rates. I am talking about carrier
> frequency. From the answers to my previous questions regarding carrier
> frequencies, I thought it was established that you mathematically
> can't have a modulator frequency more than 0.5x the carrier-frequency.

No. You can't have a sampling rate less than twice the highest
frequency in the source without aliasing, but that refers only
to sampling.

> What happened?

At a guess, you misunderstood the context of the answers to
your previous questions, or those who answered misunderstood
the context of your questions.

HTH
George

This is Radium's usual posting style - to produce some random,
obvious ideas as if no one has ever considered them before, and
then to lightly dismiss any practical difficulties anyone points
out as trivial. After all, he's the genius, you're expected to
put in all the leg work to make a ridiculous idea actually work.

I've seen him all to many times before on the likes of
alt.comp.hardware.homebuilt. It's worth looking at the Goggle
archives to see just what nonsense he comes up with. My favourite
example is Radium's understanding of semiconductors:

> Why is silicon needed in the 1st place? For that matter, why any semi-
> conductor? Why not just use the copper electric circuits? Semi-
> conductors are half-way between conductor and insulator?

I think that that says it all.

> WTF is going on here??????????????????!!!!!!!!!!!!!!!!!!!!?!?!?!?!?!

WTF is going on is that you can't ask a meaningful question.

Here's some reality:

Q: Do extra terrestrial objects generate radio signals that can be heard
on Earth?

A. Yes, thousands and thousands of them. The field is called Radio

Astronomy. Google for more information.

Q: What frequency do they generate?

A: Basically, all of them. Most natural sources of RF are broad band generators much like an electric arc.

Q: Where would one listen for signal?

A: Usually from around 1 GHz to hundreds of GHz. Some objects in the solar system generate signals down into the tens of MHz but antenna size and the ionosphere place a practical lower limit of around 100 MHz.

Q: Is the signal AM or FM or what?

A: None of the above. Modulation implies a carrier with information. Natural objects generate broad band RF noise.

Q: Don't some of the sources vary in some way?

A: Some of them vary in magnitude over time, i.e. they get louder and weaker periodically. Some sources are "bursty", i.e. most of the time the are not there, then for some period of time they are.

Q: Do magnetars generate signals?

A: Some do, some don't seem to.

Q: Are these signals audible?

A: Depends on what you mean. If you hooked a speaker to a radio telescope, you would hear white noise, i.e. a hissing sound much like what you hear on an FM radio between stations.

```

He is wrong. The basis of AM is that the sine wave

carrier is multiplied by another signal which can be
treated as a sum of sines. The relevant maths is:

 http://www.sosmath.com/trig/prodform/prodform.html

If the carrier frequency if fc and the modulation has
frequencies up to fm then you get sidebands like
this:

 http://en.wikipedia.org/wiki/Image:Am-sidebands.png

If you multiply 44.1kHz by a band from 20Hz to 20kHz,
you get an upper sideband given 44.12kHz to 64.1kHz
and a lower sideband from 44.08kHz down to 24.1kHz

>> The highest modulating frequency for AM must be less than 1/2 the carrier
>> frequency. Conversely, the lowest carrier frequency must be twice the
>> highest modulating frequency. Period. I don't care what specific

Nyquist applies to sampling.

> So who is right and who is wrong?

Look at the maths, it is never wrong. Modulating fc
with fm gives a lowest frequency of fc-fm so as long
as fc > fm, you don't get aliasing.

George

Perhaps archimedes plutonium has changed his name. Sounds about the same-
ploughing on and on without any idea of what he is doing -no answer will
shut him up. Possibly that is the right approach-killfile.

Amplitude modulation, in the communications world, has a definite
structure--I suspect that magnetar spectra don't exhibit amplitude
modulation characteristics.

However, I see, that amplitude modulation is appropriate in
astrophysics--for example...

A magnetar is a type of pulsar. You have a signal at some frequency (or range frequencies) that varies in amplitude with time (as the object spins). That's the very definition of amplitude modulation. Nearly every radio source around shows some degree of amplitude modulation as the result of spin. This includes objects radiating well out of the radio band, as well. Optical binaries exhibit AM. Starspots show up as AM. Rotating asteroids are AM. Cepheids. Cataclysmic variables. Etc.

The definitions for all types of modulation involve a carrier frequency.

Since natural phenomena generate broad band noise, it is arm waving
```

at best to call the variations in amplitude "amplitude modulation".

What it is is a broad band source that periodically varies in signal strength.

There's nothing that defines how narrow a band need be to qualify as a "carrier". Many modern communication systems are spread spectrum, which means the carrier may be very broad. Such systems are certainly modulated. Also, many astronomical sources are not broadband at all, but radiate across a narrow spectrum.

AMSAT NEWS SERVICE
ANS-196

ANS is a free, weekly, news and information service of AMSAT North America, The Radio Amateur Satellite Corporation. ANS reports on the activities of a worldwide group of Amateur Radio operators who share an active interest in designing, building, launching and communicating through analog and digital Amateur Radio satellites.

Please send any amateur satellite news or reports to:
ans-editor@amsat.org

******************** AMSAT 2007 Space Symposium **************************

The Wireless Association of South Hills Amateur Radio Club announces the 2007 AMSAT Space Symposium will be held at the Pittsburgh Airport Marriott Hotel on Friday, October 26 through Sunday, October 28, 2007.

The AMSAT web team has posted informational pages on the AMSAT web site. You can find the announcement with many links at:
http://www.amsat.org/amsat-new/symposium/2007/index.php

AO-51 Completes L/S Mode, Watch for New Modes

AMSAT News Service Bulletin 196.01
>From AMSAT HQ SILVER SPRING, MD.
July 15, 2007
To All RADIO AMATEURS
BID: $ANS-196.01

During the period of July 10 to July 12 AO-51 was in its FM repeater mode with the uplink on 1268.700 MHz and the downlink on 2401.200 MHz. Viktor, OE1VKW reported, "On July 10 AO-51 over Vienna with very strong signals!" Alan, WA4SCA reported, "AO-51 came up in VS with a 145.920 uplink at the start of the pass. A couple of minutes before LOS, it switched over to LS, and I got a couple of quick test calls in. It Sounded fine."

Starting July 13, AO-51 is in the FM repeater mode, with an uplink on

145.920 MHz and downlink on 435.300 MHz. 9K6 telemetry is on the 435.150 MHz downlink.

Next on July 24 look for AO-51 to operate with an SSB uplink via 145.880 MHz and FM downlink via 435.300 MHz.

[ANS thanks the AO-51 Operation Team for the above information]

NASA Makes Saturn Radio Transmission Recording Available

AMSAT News Service Bulletin 196.03
>From AMSAT HQ SILVER SPRING, MD.
July 15, 2007
To All RADIO AMATEURS
BID: $ANS-196.03

NASA has made available a recording from the Cassini spacecraft of Saturn's intense radio emissions called Saturn kilometric radiation.

The Cassini spacecraft began detecting these radio emissions in April 2002, when Cassini was 374 million kilometers (234 million miles) from the planet, using the Cassini radio and plasma wave science instrument, which provided the first high resolution observations of these emissions, showing an amazing array of variations in frequency and time.

The complex radio spectrum with rising and falling tones, is very similar to Earth's auroral radio emissions. These structures indicate that there are numerous small radio sources moving along magnetic field lines threading the auroral region.

For additional information and to hear the recording visit:
http://www.nasa.gov/mission_pages/cassini/multimedia/pia07966.html

[ANS thanks 'The Daily Galaxy' and NASA for the above information]

High Efficiency RF Linear Amplifier Design Proposed for Eagle

AMSAT News Service Bulletin 196.04
>From AMSAT HQ SILVER SPRING, MD.
July 15, 2007
To All RADIO AMATEURS

BID: $ANS-196.04

AMSAT members Marc Franco, N2UO and Allen Katz, K2UYH have designed a VHF, high-efficiency, class-E, RF power amplifier with a DC to RF efficiency of 86.8%. Their innovative design is based on silicon carbide (SiC) metal-semiconductor field effect transistors, or MESFETs.

The design was presented by Marc in a paper at the IEEE International Microwave Symposium in Hawaii. It is now available on-line: http://www.cree.com/products/wireless_docs.htm titled "Class-E Silicon Carbide VHF Power Amplifier" (June 5, 2007)

The final amplifier efficiency was measured at around 86 to 88% with this number holding quite well at almost any drain voltage or output power. This type of amplifier is under consideration for the envelope elimination and restoration linear amplifier planned for the AMSAT Eagle satellite.

[ANS thanks Marc, N2UO for the above information]

ARISS Status Report for the Week of July 9, 2007

AMSAT News Service Bulletin 196.05
>From AMSAT HQ SILVER SPRING, MD.
July 15, 2007
To All RADIO AMATEURS
BID: $ANS-196.05

1. School Contacts

Maples Collegiate in Winnipeg, Manitoba, Canada had an ARISS contact on Thursday, July 12. The school would like the ARISS contact to be part of the Win-Cube Project in Manitoba. Win-Cube is an innovative science and engineering project that includes students from 10 high schools in Manitoba who will participate in the design, construction, launch, and communication with a pico-satellite in low earth orbit. ARISS will provide students involved in the Win-Cube project with a real application of classroom learning with experiences like the ISS orbital elements and its relation to the availability of ground to orbit communication. Students with their amateur radio licenses performed an active role in establishing and maintaining communication with the ISS.

Arnold Palmer Hospital for Children in Orlando, Florida has been slated for an ARISS contact on Tuesday, July 17 via the telebridge station W6SRJ in California. The hospital plans on involving children, who have been hospitalized long term, with this contact. It will showcase the medical advancements made through space science, available due to NASA and its research. An ARISS team member will give a presentation to the children on Amateur Radio on the International Space Station and an astronaut will also be invited to speak to the children. Lithographs will be distributed and children will design posters in anticipation of the contact.

2. Challenger Learning Center Experiences Successful ARISS Contact

On Saturday, July 7, children visiting the Challenger Learning Center of Alaska in Kenai experienced an ARISS contact. Clay Anderson, KD5PLA, answered 12 questions posed to him by the participating students and a few more from the audience. A crowd of approximately 50 people was expected to attend.

3. ARISS TIM

An ARISS Technical Interchange Meeting (TIM) was held the week of July 9-13, in Houston. Topics of discussion included ARISS radio systems, SuitSat-2, and education issues.

4. Amateur Radio Newsline Article on ARISS Member

Amateur Radio Newsline posted a story about ARISS member Tony Hutchison, VK5ZAI, who was named to the Wireless Institute of Australia (WIA) board position of Australian National Coordinator for ARISS. Tony had recently given a talk on the ARISS education program to the board members.

[ANS thanks Carol, KB3LKI for the above information]

So is it possible for me to receive a 10 KHz audio sine-wave tone on a
1 Hz AM radio receiver? If not, why? My guess is it violates Nyquist/
Shannon. Right?

So an fm of 10 KHz would work on an fc of 10 KHz?

Spread spectrum technology uses discrete frequency hopping, not a broad band signal as a carrier.

If I have a transmitter hooked to an antenna swaying in the breeze such that the received signal strength is varying, would you call that AM?

If the side lobes of a search radar are big enough, you can receive them no matter where the radar points. The signal strength goes up and down and goes up dramatically when you are swept by the main lobe. Would you call that AM?

What part of "as long as fc is greater that fm" are you too blazingly
stupid to understand?

Is 10 KHz bigger than 10 KHz?

Idiot.

That's one spread spectrum method. Not the only one. But regardless, it still presents as a broad band carrier.

>If I have a transmitter hooked to an antenna swaying in the breeze

>such that the received signal strength is varying, would you call

Absolutely.

>If the side lobes of a search radar are big enough, you can receive

>lobe. Would you call that AM?

AM is a variation in amplitude of some signal- any signal- with time. Yes, your radar is a type of amplitude modulation. If it were a deep space signal, it is the modulation of amplitude that would most catch our attention.

Certainly AM carries a somewhat narrower meaning when discussing communications that it does when looking at astronomical signals. But the same underlying theory works for analyzing any signal that varies in intensity with time.

Nope, all spread spectrum is based on discrete frequencies with
frequency hopping of some sort.

It is only "broad band" if you integrate over multiple hops.

The carrier at each frequency is quite conventional.

Google for it.

Nope, mathematically AM is defined as a single carrier frequency
multipled by the modulation frequency. That you get a variation in
amplitude is an effect, not a definition.

It is a bit of a stretch to call a signal comprised of every frequency
over a 100 GHz span AM.

I'm afraid my background IS communications so I have to say astronomers
are arm waving when they call astronomical signals AM unless ET is
phoning home.

This looks like a good time to point out that equivalent-time and random sampling oscilloscopes display waveforms having bandwidths in the tens of GHz which were captured by sampling at rates from a hundred kHz to a few MHz, and have done so for decades.

Nothing "specific". Thats the whole point. What exactly did you
hope to hear that you think is significant? Obviously you have
something in mind.

Not always, consider the use of a frequency-shifted
fast PRBS as the carrier. Of course it is more
usual to use the PRBS to define the hop sequence in
the style you describe above but as you say your
background is communications, I'm sure you are aware
of the relationships between hop rate and carrier
spacing which lead to a band-limited white spectrum.

>> AM is a variation in amplitude of some signal- any signal- with time.

Consider applying audio (with a DC bias) to a light
bulb and receiving it with a photocell. The carrier
is much more than 100 GHz wide, but I would still
call that AM, YMMV.

> I'm afraid my background IS communications ...

Mine too ;-)

> The above link says nothing about amplitude-modulation

It says:

 sin(a)sin(b) = 1/2 * [cos(a-b) - cos(a+b)]

Take a carrier at frequency fc:

 Vc = sin(2*pi*fc*t)

and a typical modulating signal at fm:

 Vm = sin(2*pi*fm*t)

Amplitude modulation involves multiplying those
together with an offset so that there is always
some level of carrier so the transmitted signal
is:

 Vt = Vc * (1 + M * Vm)

where 0 < M < 1

You get components at cos(2*pi*(fc-fm)*t) and
cos(2*pi*(fc+fm)*t) as well as the carrier at fc.

George

fc > fm means fc should be greater than fm, not the same.
For fm = 10,000Hz and fc = 10,001Hz you get a lower
sideband at 1Hz and an upper sideband at 20,001Hz.

If you modulate 10kHz with 10Khz, the lower sideband
becomes 0Hz or DC. The value of that depends on the
phase of the modulating signal relative to the carrier
(which is now constant since they are at the same
frequency). Of course sending DC to an antenna won't
give you a transmitted signal but it doesn't produce
an alias either.

If you modulate 10,000Hz with 10,001Hz then your lower
sideband becomes -1Hz, and of course sin(-x) = sin(x)
so that is identical to a frequency of 1Hz which you
would get if you modulated with 9,999Hz. That ambiguity
is why we call such a signal an "alias", the 10,001Hz
signal appears after modulation then demodulation
masquerading as a signal of 9,999Hz.

George

I would not consider that to be an accurate description for a variety of direct sequence techniques, where the carrier itself is phase or frequency modulated by a pseudorandom sequence. Such a signal, viewed on a spectrum analyzer, looks no different than many natural, moderately narrowband sources. And there would be nothing stopping somebody from amplitude modulating such a signal.

>Nope, mathematically AM is defined as a single carrier frequency
>multipled by the modulation frequency. That you get a variation in

Reference? I think you are confusing a single definition of AM with all other definitions of the term.

>I'm afraid my background IS communications so I have to say astronomers
>are arm waving when they call astronomical signals AM unless ET is
>phoning home.

As an astronomer, I could as easily say you are arm waving by trying to restrict the meaning of AM to a narrow definition used within your field. The simple fact is that astronomers _do_ refer to signals that vary in amplitude as a function of time as "amplitude modulated". Some of those signals are broadband, and others are not (there are, for example, amplitude modulated natural masers). This is normal usage within the astronomical community, and it causes no confusion at all.

Try this one:

http://www.rfcafe.com/references/electrical/amplitude_modulation.htm

and this one:

http://ccrma.stanford.edu/~jos/mdft/Sinusoidal_Amplitude_Modulation_AM.html

and see if you notice any similartity in the equations.

Of course, anyone with more than half a brain could have done a Google search for AM modulation equation and come up with thousands of hits.

If you frequency or phase modulate, the resultant spectrum may be
quite broad, but the carrier frequency is still discreate no matter
what you modulate with.

It may look like band limited white noise on a spectrum analyser,
but if you decompose in the time domain, it isn't.

If you frequency or phase modulate, the spectrum does get broad, but
there is still a discreat carrier frequency.

While it may look like band limited white noise on a vanilla spectrum
analyzer, it isn't.

So, is the square root of -1 j or i?

What makes you think there is anything in that mind other than a
bunch of technical words and terms strung together in a random manner?

Sorry. I didn't read it correctly.

Does this mean an fm of 10 KHz would work on an fc of
10.0000000000000000000001 KHz?

If so, then the minimum frequency required for my "project" would be
only 20.0000000000000000001 KHz. Or just anything above 20 KHz, even
if it's just an extremely extremely small number above 20,000. Right?

I apologize if readers find my question annoying.

To all:

I have a neurological disability called Asperger's Syndrome.

I would like to give you some information about my disability. The
reason I am posting this message about Asperger's is to help avoid any
potential misunderstandings [though it's probably too late].

I have been diagnosed with Asperger's Syndrome (AS). AS is a
neurological condition that causes significant impairment in social
interactions. People with AS see the world differently and this can
often bring them in conflict with conventional ways of thinking. They
have difficulty in reading body language, and interpreting subtle
cues. In my situation, I have significant difficulty with natural

conversation, reading social cues, and maintaining eye contact. This can lead to a great deal of misunderstanding about my intent or my behavior. For example, I may not always know what to say in social situations, so I may look away or may not say anything. I also may not always respond quickly when asked direct questions, but if given time I am able express my ideas.

On Usenet, the text-equivalent of my disability is probably noticed. I do apologize profusely, for any inconvenience it causes.

Thank you very much in advance for your understanding, cooperation, and assistance.

Since all you are going to hear from astronomical sources is white noise, it doesn't matter.

Aliasing is irrelevant.

The bigger issue with the frequency (other than plain stupidity) you have choosen is that to be able to say you are hearing signals from something specific in the sky as opposed to everything in the sky, you need to have antenna directivity.

At a frequency of 44 KHz that means an antenna about 500 miles in diameter and there isn't much that can be done to make it smaller.

Why does it need to be around 500 miles? Atomic-clock wrist-watches
receive extremely long wavelengths and are able to do so with their
tiny sizes. Couldn't something similar be done for my 'application'?
If not, then why?

You need directivity otherwise you are "listening" to everything, not
just one source or even a small number of sources.

Directivity is directly related to antenna physical size in wavelengths.

The wavelength of 44 KHz is roughly 7,000 meters.

You can't get around it.

No problem, it's an easy point to miss and in fact
you are right in that it doesn't produce aliases.

Yes.

> if it's just an extremely extremely small number above 20,000. Right?

In theory, but you are missing the bigger picture. Space
is not a perfect vacuum and in the vicinity of the Solar
System, the Solar wind pushes back the inter-stellar
medium. You can read more on that here:

 http://en.wikipedia.org/wiki/Heliosphere

Both the material within the region and the ISM are almost
entirely ionised so are in a form known as "plasma", a
soup of charged particles. One of the feautures of plasma
is that is absorbs low frequency signals below what is
called the "plasma cutoff frequency". Basically below
the VHF band, space becomes increasingly opaque and signals
from stars don't reach us.

> I apologize if readers find my question annoying.

No problem.

George

Do you think the SHF band [at most 30 GHz but at least 3 GHz] would be better suited for this? Would it be the ideal range of frequencies for detecting AM radio signals emitted by magnetars?

http://en.wikipedia.org/wiki/Super_high_frequency

SHF seems to be the sweet spot between frequencies that are high-enough to rip through charged particles yet low-enough to be wireless and long-distance. At EHF and above, it starts to get into the IR range where long-distance wireless reception is not possible.

He is correct. AM is a variation in amplitude of some signal (usually
a carrier wave).

> That you get a variation in amplitude is an

So what, you can define it how you wish, the effect is still one of
variation in amplitude of the carrier. Definitions do not dictate what
happens.

> It is a bit of a stretch to call a signal comprised of every frequency
> over a 100 GHz span AM.

Such a signal may still be demodulated with an am receiver. Of course that
will not yield the full extent of the information from the signal that may
be had from it but just for the sake of "listening" to it as some want to
do there is nothing wrong with that.

Astronomical signals aren't derived from PLL's or crystals, they aren't synthesized for receiving on radios with parameters tailored for speech or music even if they are sometimes or often demodulated by them given the right circumstances. I think you need to understand that radio sources in space are complex and may have several facets operating simultaneously each of which may tell a physicist a part of a story. You seem to be stuck in some sort of pedantic communications rut.

That isn't a mathematical definition of amplitude modulation. It's an example of an implementation of amplitude modulation for the purpose of deliberately encoding information. And in fact, it's idealized since no carrier frequency can ever be perfectly discrete. I've never seen a rule for how narrow or broad a carrier needs to be in order for an amplitude modulated form of it to be allowed to carry the term "amplitude modulation". And I'm sure you haven't either.

Like I said, you're confusing one particular usage of the term (one that isn't even relevant to astronomy) with the more general meaning- a signal that is modulated in intensity as a function of time.

In astronomy, we are concerned mostly with two types of modulation. Amplitude modulation is what we usually observe with a range of phenomena that show a variation in intensity with time, where the carrier signal may range from hard x-rays through radio waves (and be either narrowband or broadband), and the modulation frequency varies from a few kilohertz to many years per cycle. Frequency modulation is what we observe in spectroscopic binaries, large rotating objects, and other sources that have a line-of-site motion component. The carrier signal again ranges from x-rays through radio, but the modulation cycle time is measured in hours or more.

There are many astronomical sources that are not white noise. There are masers. There are natural filters that convolve some background signal that may or may not itself have structure. There are signals that are modulated in amplitude, phase, or frequency.

If the Universe consisted of nothing but noise sources, there wouldn't be much value in radio astronomy.

Since when have radio controlled watches indicated the direction
to their transmitters?

There are ways of avoiding the need for such a large antenna, but
it isn't straightforward.  Basically you'd work from two sites at
least that far apart and combine the signals via interferometry.
But the maths for this will be above your head.  If you are interested
in this then change the habit of a lifetime and research the area
thoroughly for yourself _before_ spouting forth yet more ill-conceived
pseudoscientific "theories".

There you have it.

The basic problem is we speak two different languages; it's j.

It is like telling the Marine Corp and the Air Force to "secure a building".

The Corp orders air and artillery strikes, does a frontal infantry
assualt and establishes a defensive perimeter inside the building.

The Air Force takes out a three year lease with an option to buy.

Okay so it seems like a no win-situation here. Too low and plasmas
will cut it off. Too high and you lose strength really fast.

http://www.terabeam.com/support/calculations/free-space-loss.php

>From the above link, it seems that a higher-frequency radio wave would
lose its strength faster than a lower-frequency radio wave of the same
original strength would.

At the start of the transmission, both the higher and lower frequencies maybe at the same power [watts-per-meter-squared]. However, the higher frequency will lose its strength -- and likely dissipate into the noise floor -- quicker than the lower-frequency. Hence, reception of higher-frequencies requires that the transmitter and receiver be closer together.

Blasphemy; unbelievers are not allowed to speak the one true language.

In a broad band astronomical signal, where does one find the upper and
lower side bands of AM?

Are they standing tall and proud as they should, or are they lost in
the hiss and spit of a signal that is best described as "shit happens"?

Then what is the best frequency for detecting audible AM radio signals
from magnetars?

It seems like a no win-situation here. Too low and plasmas will cut it
off. Too high and you lose strength really fast.

http://www.terabeam.com/support/calculations/free-space-loss.php

>From the above link, it seems that a higher-frequency radio wave would
lose its strength faster than a lower-frequency radio wave of the same
original strength would.

At the start of the transmission, both the higher and lower
frequencies maybe at the same power [watts-per-meter-squared].
However, the higher frequency will lose its strength -- and likely
dissipate into the noise floor -- quicker than the lower-frequency.
Hence, reception of higher-frequencies requires that the transmitter
and receiver be closer together.

For random sampling of periodic signals the resolution is about the aperture,
not the rate.
